**Sciences de la Terre** Académie des sciences (Paris),2001      Sciences de la terre ,1982      **Evolution of Cenozoic Land Mammal Faunas and Ecosystems** Isaac Casanovas-Vilar,Lars W. van den Hoek Ostende,Christine M. Janis,Juha Saarinen,2023-08-08 This volume presents an array of different case studies which take as primary material data sourced from the NOW New and Old Worlds database of fossil mammals The NOW database was one of the very first large paleobiological databases and since 1996 it has been expanded from including mainly Neogene European land mammals to cover the entire Cenozoic at a global scale In the last two decades the number of works that are based in the use of huge databases to explore ecological and evolutionary questions has increased exponentially and even though the importance of big data in paleobiological research has been outlined in selected chapters of general works no volume has appeared before this one which solely focuses on the databases as a primary source in reconstructing the past The purpose of this book is to provide an illustrative volume showing the importance of big data in paleobiological research and presenting a broad array of unpublished examples and case studies The book is mainly aimed to professional palaeobiologists working with Cenozoic land mammals but the scope of the book is broad enough to fit the interest for evolutionary biologists paleoclimatologists and paleoecologists The volume is divided in four parts The first part includes two chapters on the development of large paleobiological databases providing a first hand account on the logic and the functioning of these databases This is a much needed perspective which is ignored by most researchers and users of such databases and even if centered in the NOW database the lessons that can be learned from this part can be extended to other examples After this introductory part the body of the book follows and is divided into three parts patterns in regional faunas large scale patterns and processes and ecological biogeographical and evolutionary patterns of key taxa Each chapter is written by well known specialists in the field with some participation of members of the NOW advisory board The array of selected mammal taxa ranges from carnivores equids ruminants and rodents to the genus Homo The topics studied also include the diversification and radiation of major clades large scale paleobiogeographical patterns the evolution of ecomorphological patterns and paleobiological problems such as evolution of body size or species longevity In most cases the results are discussed in relation to protracted environmental or paleogeographic changes      **Évolution géologique de la terre et ancienneté de l'homme** Alphonse Cels,1924      Evolution De La Biosphere Et E Francis Lethiers,2021-09-09 The evolution of the living world has not been straightforward process over geological time On the contrary it shows episodes of crises separating phases of evolving radiation This work presenting an assessment of the paleontological discoveries of the last fifteen years could be summed up by the formula the evolution of life on our planet or biodiversity This book which combines clarity of presentation with scientific rigor will be of interest to biologists and geologists as well as teachers students and all those wishing to extend their knowledge on the subject      **L'évolution des idées en géologie** Bernard Balan,2011 Alors que l'interet primordial

pour la Terre notre demeure s'est d'abord traduit par des spéculations mythiques et philosophiques sur l'origine du monde dont elle occupait le centre la rencontre au XVIII<sup>e</sup> siècle entre l'Art des Mines et l'Histoire Naturelle des Minéraux à laquelle se rattachait la Géographie Physique a fait du globe terrestre envisagé dans sa profondeur un nouveau domaine de recherche positive Mais entre ce moment initial et son accès récent au rang de science la Géologie a connu une longue période de gestation au cours de laquelle l'interprétation des résultats obtenus sur le terrain nous fait assister à une confrontation permanente entre les cosmogonies imaginaires avec leurs séquelles et la volonté de parvenir à l'explication objective des phénomènes observés

*Evolution of Tertiary Mammals of North America: Volume 1, Terrestrial Carnivores, Ungulates, and Ungulate Like Mammals* Christine M. Janis, Kathleen M. Scott, Louis L. Jacobs, 1998-05-28 This book is designed as a source and reference for people interested in the history and fossil record of North American tertiary mammals Each chapter covers a different family or order and includes information on anatomical features systematics the distribution of the genera and species at different fossil localities and a discussion of their paleobiology Many of these groups have never been covered in this fashion before

**L'origine des formes de la terre et des planètes** Emile Belot, 1918 *Les Sciences de la terre aux XVII<sup>e</sup> et XVIII<sup>e</sup> siècles* Gabriel Gohau, 2014-04-01 Chacun sait que la science n'a eu d'aut but du XVII<sup>e</sup> siècle lorsque Kepler Galilée et Descartes notamment ont couverts les bases de l'astronomie et de la mécanique Pourtant les sciences de la vie et de la terre ne suivent pas le mouvement Malgré les efforts d'exploration et de classification du monde vivant et du domaine minéral ces disciplines ne prendront leur essor qu'à la fin du XIX<sup>e</sup> siècle Ce travail comme celui de Guyot se situe donc dans l'entre-deux des révolutions scientifiques Notre souhait finalement sera que le lecteur prenne assez de goût ces lectures pour les prolonger en allant aux auteurs cités dans les bibliothèques chez les bouquinistes ou dans les éditions modernes qui se multiplient et qui sans avoir le charme des livres anciens sont un moyen commode et bon marché d'accéder au fonds de notre littérature scientifique des siècles passés
