Fuzzy Data Warehousing for Performance Measurement Daniel Fasel, 2014-07-08 The numeric values retrieved from a data warehouse may be difficult for business users to interpret and may even be interpreted incorrectly Therefore in order to better understand numeric values business users may require an interpretation in meaningful non numeric terms However if the transition between non numeric terms is crisp true values cannot be measured and a smooth transition between classes may no longer be possible This book addresses this problem by presenting a fuzzy classification based approach for a data warehouses Moreover it introduces a modeling approach for fuzzy data warehouses that makes it possible to integrate fuzzy linguistic variables in a meta table structure The essence of this structure is that fuzzy concepts can be integrated into the dimensions and facts of an existing classical data warehouse without affecting its core This allows a simultaneous analysis both fuzzy and crisp A case study of a movie rental company underlines and exemplifies the proposed approach

Advances in Knowledge Discovery and Management Fabrice Guillet, Gilbert Ritschard, Djamel A. Zighed, 2010-06-11 During the last decade the French speaking scientific community developed a very strong research activity in the field of Knowledge Discovery and Management KDM or EGC for Extraction et Gestion des Connaissances in French which is concerned with among others Data Mining Knowledge Discovery Business Intelligence Knowledge Engineering and SemanticWeb The recent and novel research contributions collected in this book are extended and reworked versions of a selection of the best papers that were originally presented in French at the EGC 2009 Conference held in Strasbourg France on January 2009 The volume is organized in four parts Part I includes five papers concerned by various aspects of supervised learning or information retrieval Part II presents five papers concerned with unsupervised learning issues Part III includes two papers on data streaming and two on security while in Part IV the last four papers are concerned with ontologies and semantic

Moving Objects Management Xiaofeng Meng,Jidong Chen,2011-01-27 We live in an age of rapid technological development The Internet already affects our lives in many ways Indeed we continue to depend more and more intrinsically on the Internet which is increasingly becoming a fundamental piece of societal infrastructure just as water

supply electricity grids and transportation networks have been for a long time But while these other infrastructures are relatively static the Internet is undergoing swift and fundamental change Notably the Internet is going mobile The world has some 6.7 billion humans 4 billion mobile phones and 1.7 billion Internet users The two most populous continents Asia and Africa have relatively low Internet penetration and hold the greatest potentials for growth Their mobile phone users by far outnumber their Internet users and the numbers are growing rapidly China and India are each gaining about half a dozen million new phone users per month Users across the globe as a whole increasingly embrace mobile Internet devices with smart phone sales are starting to outnumber PC sales Indeed these and other facts suggest that the Internet stands to gain a substantial mobile component This mega trend towards mobile is enabled by rapid and continuing advances in key technology areas such as mobile communication consumer electronics GPS positioning and computing In short this is the backdrop for this very timely book on moving objects by Xiaofeng Meng and Jidong Chen

Grid Resource Management

Mumtaz Siddiqui, Thomas Fahringer, 2010-01-30 In a dynamic computing environment such as the Grid resource management plays a crucial role for making distributed resources available on demand to anyone from anywhere at any time without undermining the resource autonomy this becomes an art when dealing with heterogeneous resources distributed under multiple trust domains spanning across the Internet Today Grid execution environments provide abstract workflow descriptions that need a dynamic mapping to actual deployments this further accentuates the importance of resource management in the Grid This monograph renders boundaries of the Grid resource management identifies research challenges and proposes new solutions with innovative techniques for on demand provisioning automatic deployments dynamic synthesis negotiation based advance reservation and capacity planning of Grid resources The Grid capacity planning is performed with multi constrained optimized resource allocations by modelling resource allocation as an on line strip packing problem and introducing a new solution that optimizes resource utilization and QoS while generating contention free solutions On demand resource provisioning becomes possible by simplifying abstract resource descriptions independent from the concrete installations The book further explains the use of the semantic web technologies in the Grid to specify explicit definitions and unambiguous machine interpretable resource descriptions for intelligent resource matching and synthesis the synthesis process generates new compound resources with aggregated capabilities and prowess The newly introduced techniques have been developed and integrated in ASKALON Grid application development and runtime environment deployed in the Austrian Grid and demonstrated through well performed experiments

Workflows for e-Science

Ian J. Taylor, Ewa Deelman, Dennis B. Gannon, Matthew Shields, 2007-12-31 This collection of articles on Workflows for e-Science is very timely and important Increasingly to attack the next generation of scientific problems multidisciplinary and distributed teams of scientists need to collaborate to make progress on these new Grand Challenges Scientists now need to access and exploit computational resources and databases that are geographically distributed through the use of high speed networks

Virtual Organizations or VOs must be established that span multiple administrative domains and or institutions and which can provide appropriate authentication and authorization services and access controls to collaborating members Some of these VOs may only have a fleeting existence but the lifetime of others may run into many years The Grid community is attempting to develop both standards and middleware to enable both scientists and industry to build such VOs routinely and robustly This of course has been the goal of research in distributed computing for many years but now these technologies come with a new twist service orientation By specifying resources in terms of a service description rather than allowing direct access to the resources the IT industry believes that such an approach results in the construction of more robust distributed systems The industry has therefore united around web services as the standard technology to implement such service oriented architectures and to ensure interoperability between different vendor systems
