Scientific Practice And Ordinary Action Ethnomethodology And Social Studies Of Science:

Scientific Practice and Ordinary Action Michael Lynch, 1993 This controversial book disputes the idea that science is the application of a unified method or the outgrowth of a progressive history of ideas

The Oxford Handbook of Phenomenologies and Organization Studies François-Xavier de Vaujany, Jeremy Aroles, Mar Pérezts, 2023

Phenomenologies are a major stream of philosophy Our aim with this handbook is to explore critically and reflexively the plurality of phenomenologies and their becoming in the context of Management and Organization Studies We detail in the introduction the genealogy of the phenomenological moment and make a distinction between four streams of phenomenologies phenomenology as a phenomenological moment post phenomenologies anti phenomenologies and non phenomenologies Beyond many clichés about phenomenologies we argue that phenomenologies cultivate critical perspectives ontologies and even for some of them metaphysics that make them particularly interwoven with other philosophical traditions We draw implications for Management and Organization Studies as a field

The Philosophy of Science Anouk Barberousse, Denis Bonnay, Mikael Cozic, 2018-06-28 Philosophy of science studies the methods theories and concepts used by scientists It mainly developed as a field in its own right during the twentieth century and is now a diversified and lively research area This book surveys the current state of the discipline by focusing on central themes like confirmation of scientific hypotheses scientific explanation causality the relationship between science and metaphysics scientific change the relationship between philosophy of science and science studies the role of theories and models unity of science These themes define general philosophy of science The book also presents sub disciplines in the philosophy of science dealing with the main sciences logic mathematics physics biology medicine cognitive science linguistics social sciences and economics While it is common to address the specific philosophical problems raised by physics and biology in such a book the place assigned to the philosophy of special sciences is much more unusual Most authors collaborate on a regular basis in their research or teaching and share a common vision of philosophy of science and its place within philosophy and academia in general The chapters have been written in close accordance with the three editors thus achieving strong unity of style and tone **Handling Digital Brains** Morana Alac, 2011-04-22 An analysis of how fMRI researchers actively involve their bodies with hand movements in particular in laboratory practice The results of fMRI brain scanning require extensive analysis in the laboratory In Handling Digital Brains Morana Ala shows that fMRI researchers do not sit passively staring at computer screens but actively involve their bodies in laboratory practice Discussing fMRI visuals with colleagues scientists animate the scans with gestures and talk as they work with computers Ala argues that to understand how digital scientific visuals take on meaning we must consider their dynamic coordination with gesture speech and working hands These multimodal actions she suggests are an essential component of digital scientific visuals A semiotician trained in cognitive science Ala grounds her discussion in concepts from Peirce s semiotics and her methodology

in ethnography and multimodal conversation analysis Basing her observations on videotaped records of activity in three fMRI research labs Ala describes scientists manual engagement with digital visuals of the human brain Doing so she turns her attention to the issue of practical thinking Ala argues that although fMRI technology directs scientists to consider human thinking in terms of an individual brain scientific practices in the fMRI lab demonstrate thinking that engages the whole lived body and the world in which the body is situated The turn toward the digital does not bring with it abstraction but a manual and embodied engagement The practical and multimodal engagement with digital brains in the laboratory challenges certain assumptions behind fMRI technology it suggests our hands are essential to learning and the making of meaning

A Sociology of Crime Stephen Hester, Peter Eglin, 2017-05-15 A Sociology of Crime has an outstanding reputation for its distinctive and systematic contribution to the criminological literature Through detailed examples and analysis it shows how crime is a product of processes of criminalisation constituted through the interactional and organizational use of language In this welcome second edition the book reviews and evaluates the current state of criminological theory from this grammatical perspective It maintains and develops its critical and subversive stance but greatly widens its theoretical range including dedicated chapters on gender race class and the post als including postcolonialism It now also provides questions exercises and further readings alongside its detailed analysis of a set of international examples both classical and contemporary

Design Research Through Practice Ilpo Koskinen, John Zimmerman, Thomas Binder, Johan Redstrom, Stephan Wensveen, 2011-09-29 Design Research Through Practice From the Lab Field and Showroom focuses on one type of contemporary design research known as constructive design research It looks at three approaches to constructive design research Lab Field and Showroom The book shows how theory research practice and the social environment create commonalities between these approaches It illustrates how one can successfully integrate design and research based on work carried out in industrial design and interaction design The book begins with an overview of the rise of constructive design research as well as constructive research programs and methodologies It then describes the logic of studying design in the laboratory design ethnography and field work and the origins of the Showroom and its foundation on art and design rather than on science or the social sciences It also discusses the theoretical background of constructive design research along with modeling and prototyping of design items Finally it considers recent work in Lab that focuses on action and the body instead of thinking and knowing Many kinds of designers and people interested in design will find this book extremely helpful Gathers design research experts from traditional lab science social science art industrial design UX and HCI to lend tested practices and how they can be used in a variety of design projects Provides a multidisciplinary story of the whole design process with proven and teachable techniques that can solve both academic and practical problems Presents key examples illustrating how research is applied and vignettes summarizing the key how to details of specific projects

Thinking Practices in Mathematics and Science Learning James G. Greeno, Shelley V. Goldman, 2013-04-03 The term used in the title of this volume thinking practices evokes questions that the authors of the chapters within it begin to answer What are thinking practices What would schools and other learning settings look like if they were organized for the learning of thinking practices Are thinking practices general or do they differ by disciplines If there are differences what implications do those differences have for how we organize teaching and learning How do perspectives on learning cognition and culture affect the kinds of learning experiences children and adults have This volume describes advances that have been made toward answering these questions These advances involve several agendas including increasing interdisciplinary communication and collaboration reconciling research on cognition with research on teaching learning and school culture and strengthening the connections between research and school practice The term thinking practices is symbolic of a combination of theoretical perspectives that have contributed to the volume editors understanding of how people learn how they organize their thinking inside and across disciplines and how school learning might be better organized By touring through some of the perspectives on thinking and learning that have evolved into school learning designs Greeno and Goldman begin to establish a frame for what they are calling thinking practices This volume is a significant contribution to a topic that they believe will continue to emerge as a coherent body of scientific and educational research and practice

Visualization in the Age of Computerization Annamaria Carusi, Aud Sissel Hoel, Timothy Webmoor, Steve Woolgar, 2014-08-21 Digitalization and computerization are now pervasive in science This has deep consequences for our understanding of scientific knowledge and of the scientific process and challenges longstanding assumptions and traditional frameworks of thinking of scientific knowledge Digital media and computational processes challenge our conception of the way in which perception and cognition work in science of the objectivity of science and the nature of scientific objects They bring about new relationships between science art and other visual media and new ways of practicing science and organizing scientific work especially as new visual media are being adopted by science studies scholars in their own practice This volume reflects on how scientists use images in the computerization age and how digital technologies are affecting the study of science

Expert Evidence and Scientific Proof in Criminal Trials Paul Roberts, 2017-07-05 Forensic science evidence and expert witness testimony play an increasingly prominent role in modern criminal proceedings Science produces powerful evidence of criminal offending but

has also courted controversy and sometimes contributed towards miscarriages of justice. The twenty six articles and essays reproduced in this volume explore the theoretical foundations of modern scientific proof and critically consider the practical issues to which expert evidence gives rise in contemporary criminal trials. The essays are prefaced by a substantial new introduction which provides an overview and incisive commentary contextualising the key debates. The volume begins by placing forensic science in interdisciplinary focus with contributions from historical sociological Science and Technology Studies STS philosophical and jurisprudential perspectives. This is followed by closer examination of the role of forensic science and other expert evidence in criminal proceedings exposing enduring tensions and addressing recent controversies in the relationship between science and criminal law. A third set of contributions considers the practical challenges of interpreting and communicating forensic science evidence. This perennial battle continues to be fought at the intersection between the logic of scientific inference and the psychology of the fact finder's common sense reasoning. Finally the volume's fourth group of essays evaluates the limited success of existing procedural reforms aimed at improving the reception of expert testimony in criminal adjudication and considers future prospects for institutional renewal with a keen eye to comparative law models and experiences success stories and cautionary tales.
