Scientific American Medicine Edward RUBENSTEIN, 1986 Tomorrow's Medicine Scientific American Editors, 2014-04-28 One hundred years ago most of the medical treatments and technologies that we take for granted hadn t even been imagined or were found in the pages of science fiction novels rather than medical journals Today on the other hand medical research often sounds like science fiction This eBook Tomorrow's Medicine looks at some of the more fascinating areas where technology that could transform health is being developed including cybernetics regenerative medicine nanotechnology and genetically tailored treatments Although many of these advances may not be ready to treat humans for many years some of them may someday profoundly change and extend our lives In Bionic Connections for example D Kacy Cullen and Douglas Smith discuss synthetic limbs that function as well or better than our own Echoes of the 1966 film Fantastic Voyage abound in Nanomedicine Targets Cancer by James Heath Mark Davis and Leroy Hood who examine how miniaturized tools can both measure the molecular interactions of disease and deliver targeted therapies Several articles discuss different approaches for regeneration including Grow Your Own Eye in which author Yoshiki Sasai illustrates how his lab successfully grew a retina from stem cells to A Sweet Solution for Replacing Organs in which Katherine Harmon describes how a speaker at a recent TED talk used a 3 D printer to create a kidney A century from now will the sight of an amputee be a rarity with cybernetic limbs controlled by thought and nearly indistinguishable from the biological ones Perhaps most people will have their genomes read for indications of future disease and take steps to prevent it or even to cure inherited disorders Will we replace some drugs with tiny machines fanning out inside the body to repair

damage As exciting as these possibilities are to extend both the length and quality of life immortality or at least agelessness may be forever out of our reach As Thomas Kirkwood notes in his piece Why Can t We Live Forever death might be the price we pay for our complex biology Even so the doctors of a century past would surely be impressed by what medical science has accomplished in the past hundred years antibiotics organ transplants and the elimination of smallpox to name but a few The next century should be equally impressive and with the various types of new technologies on the horizon many of us have a good chance of seeing it happen ACP Medicine ,1978 Scientific American Medicine Edward Rubenstein,1988
