
SCIENTIFIC METHODS OF DETECTING DECEPTION

It is the method of gathering and knowing from the subject about the crime dispute or the question of issue employing the use of machine or device, drugs or substances and other accessory means. Most of the test are not reliable to be true and thus the information gathered are not admissible in court as evidence but only important to be used for further investigation.

1. Lie Detector Test- A test used to record the physiological changes associated with lying subject. The polygraph machine will record the blood pressure, respiratory rate and the skin resistance to electricity in a chart paper. Although the polygraph has been used extensively as an investigative aid in assisting law enforcement agencies in reducing the number of suspects in a particular offense and also used as pre-employment examination in business and industry, there are about 5 percent of the tests that are inconclusive because of the drawback. Some test showed positive results and yet the subject is innocent can other test gave negative result to guilty subject. In business and industry, the device is used to inquire deliberate falsification of application and other documents, illicit use of drugs, and thief of money or merchandized from the previous employers. In spite of the drawbacks and unreliable results that it may not admissible in court, modification s and improvement in the machine have been done. In some countries like in the United State, the result f the test as evidence is steadily moving towards the direction of admissibility in court, while the Philippines it still not admissible in court.

2. Administration of Truth Serum or Narco-analysis- This is a detecting deception method using narcotic or anesthetic drug in order to get information from the subject.

DRUG USED- (TRUTH SERUM)

| 1. Hyocine Hydro bromide | 6. Methyl phenidate |
| 2. Sodium amytal | 7. Droperidol |
| 3. Penthotal | 8. Scopolamine |
| 4. Seconal and other barbiturates | 9. Trichloroethylene (Anesthetic drug) |
| 5. Methedrine | |

3. Hypnotism- This method was introduced by an Australian Physician Franz (Friedrich) Anton Mesmer (1734-1815) in 1778. He believed in animal magnetism, by which in his own personal electro- magnetism, Therapeutic effect influenced other persons. These effects produced were attributed to the state of mind of a subject whereby he is set up, and thereby instructed. to sit quietly and gazed at flashing light or shiny object tangled in front of his eyes and to cooperate with whatever the hypnotist like him to do.

Detected deception through hypnosis was not admissible in court due to the following.

1. In lacks the general scientific acceptance of the reliability of hypnosis in ascertaining the truth from falseness.
2. The possibility that the hypnotized subject will deliberately fabricate.
3. The prospect that the state of heightened suggestibility in which the hypnotized subjects is suspended will produce distortion of the fact rather than the truth.
4. The state of the mind and professionalism of the examiner are too subjective to permit admissibility of the expert testimony.
