

Levels of Scientific Evidence,

with Dr. Kat

Scientific evidence can be confusing! It's easy to mistake weak evidence for strong evidence. Sometimes people share unreliable things on social media with good intentions, but sometimes they're exploiting the public's lack of understanding of different levels of evidence. We all encounter claims online, but **all evidence is not created equal**. So, how can you tell the quality? This infographic can help you find your way.

META-ANALYSIS

Statistical method that combines the results of multiple scientific studies

Example: Connection between intelligence test scores and education

SYSTEMATIC REVIEW

The gold standard for testing health claims. The reviewer does not include experiments but summarizes them. Researchers randomly assign participants to groups to make fair comparisons and test treatments & ways that evidence lies

Example: Does COVID-19 vaccine work

CONTROLLED TRIAL

A study that compares a group of individuals with a specific condition to a group of people without that condition to find out what may have caused it

Example: A study used to determine a link between smoking and lung cancer

Don't forget: Correlation does NOT equal causation

TWO GROUP / CASE SERIES

A study on one person (report) or one group (series) of people with similar clinical characteristics. Because these studies don't make comparisons, they aren't as strong as the evidence in higher levels of the pyramid

Example: Reported flu cases reported with no comparison

OPINION PIECE

An editorial opinion presented without data. More prone to bias

META-ANALYSIS AND SYSTEMATIC REVIEW

RANDOMIZED TRIAL

COHORT STUDY

CASE-CONTROL STUDY

CROSS-SECTIONAL STUDY

CASE REPORT / CASE SERIES

EXPERT OPINION

INTERVIEW REVIEW

Synthesis of all data summarized in a meta-analysis. Offers interpretation and context

Example: Evidence synthesis, scores on biomarkers for COVID-19

COHORT STUDY

Often a large, long-term study that looks at what causes diseases in different groups (cohorts). It is not randomized

Example: Framingham Heart Study

CASE-CONTROL STUDY

A study that measures the health of a particular group of people at a particular point in time

Example: National Health and Nutrition Examination Survey
