The Compromise of Liberal Environmentalism Steven Bernstein,2001-09-11 The most significant shift in environmental governance over the last thirty years has been the convergence of environmental and liberal economic norms toward liberal environmentalism which predicates environmental protection on the promotion and maintenance of a liberal economic order Steven Bernstein assesses the reasons for this historical shift introduces a socio evolutionary explanation for the selection of international norms and considers the implications for our ability to address global environmental problems The author maintains that the institutionalization of sustainable development at the 1992 United Nations Conference on Environment and Development UNCED legitimized the evolution toward liberal environmentalism Arguing that most of the literature on international environmental politics is too

rationalist and problem specific Bernstein challenges the mainstream thinking on international cooperation by showing that it is always for some purpose or goal His analysis of the norms that guide global environmental policy also challenges the often presumed primacy of science in environmental governance **Mountains in the Greenhouse** Donald

McKenzie,2020-06-17 This book is written for general readers with an interest in science and offers the tools and ideas for understanding how climate change will affect mountains of the American West A major goal of the book is to provide material that will not become quickly outdated and it does so by conveying its topics through constants in ecological science that will remain unchanged and scientifically sound The book is timely in its potential to be a long term contribution and is designed to inform the public about climate change in mountains accessibly and intelligibly The major themes of the book include 1 mountains of the American West as natural experiments that can distinguish the effects of climate change because they have been relatively free from human caused changes 2 mountains as regions with unique sensitivities that may change more rapidly than the Earth as a whole and foreshadow the nature and magnitude of change elsewhere and 3 different interacting components of ecosystems in the face of a changing climate including forest growth and mortality ecological disturbance and mountain hydrology Readers will learn how these changes and interactions in mountains illuminate the complexity of ecological changes in other contexts around the world Ecological Understanding Steward T.A.
