Science in the Ancient World Russell M. Lawson, 2021-09-23 Science in the Ancient World

presents a worldwide history of science from prehistoric times through the medieval period. It covers Europe, Africa, Asia, and the Americas and includes topics ranging from alchemy and astrology to psychology and physics. This work spans prehistory to 1500 CE, examining thousands of years of history in four world regions: Asia, Africa, Europe, and the Americas. Highlights of this period include the onset of civilization and science in Mesopotamia and Egypt; the accomplishments of the ancient Greeks between 700 BCE and 100 CE; the adaptation of Greek science by the Romans; the spread of Greek science during the Hellenistic Age; the expansion of Islamic power and commensurate scientific knowledge; and the development of science and philosophy in ancient China and India. Focusing on the history of the science that blossomed in the above regions, scientific disciplines covered include alchemy, astronomy, astrology, agriculture, architecture, biology, botany, chemistry, engineering, exploration, geography, hydraulics, institutions of science, marine science, mathematics, medicine, meteorology, military science, myth and religion, philosophy, philosophy of science, psychology, physics, and social sciences. In all of these fields, theory and application are explored, as are leading individuals and schools of thought, centers of intellectual activity, and notable accomplishments and inventions.

Ancient Greek and Roman Science Liba Taub, 2023-04-25. Very Short Introductions. Brilliant. Sharp. Inspiring. Ancient Greece is often considered to be the birthplace of science and medicine and the explanation of natural phenomena without recourse to supernatural causes. The early natural philosophers, lovers of wisdom, concerning nature sought to explain the order and composition of the world and how we come to know it. They were particularly interested in what exists and how it is ordered: ontology and cosmology. They were also concerned with how we come to know: epistemology, and how best to live: ethics. At the same time, the scientific thinkers of early Greece and Rome were also influenced by ideas from other parts of the world and incorporated aspects of Egyptian, Babylonian, and Indian science and mathematics in their studies. In this Very Short Introduction, Liba Taub gives an overview of the major developments in early science between the 8th century BCE and 6th century CE. Focussing on Greece and Rome, Taub challenges a number of modern misconceptions about science in the classical world, which has often been viewed with a modern lens and by modern scientists, such as the misconception that little empirical work was conducted or that the Romans did not do science, unlike the Greeks. Beginning with the scientific notions of Thales, Pythagoras, Parmenides, and other Presocratics, she moves on to Plato and Aristotle, before considering Hellenistic science, the influence of the Stoics and Epicurean ideas, and the works of Pliny the Elder, Eratosthenes, and Ptolemy. In her sweeping discussion, Taub explores the richness and creativity of ideas concerning the natural world and the influence these ideas have had on later centuries.
