Death of a Scientist Michael G. Welham, Mike Welham, 2013 A Time for War When a President and a Prime Minister want to go to war to remove a dictator and gain control of his country's vast reserves of oil, they must gain public support. A threat from the dictator, President, to use chemical and biological weapons gives them their reason. But the weapons inspectors just can't find the evidence that the country has such weapons. To counter this, a political dossier is created claiming the existence of weapons of mass destruction. A Time to Die Dr. John Finch, the world-renowned British specialist in chemical and biological weapons, is a member of a UN inspection team. He discovers that no such weapons exist; that the dossier is misleading and refuses to toe the political line. His actions do not stop the war, but it results in him becoming a target for a political assassination. Chuck Cornell, a member of the ultra-secret Black Eagles, is assigned the task, and Dr. Finch is his victim. When Dr. Finch is found dead in a wood, it looks like suicide, but somebody has tampered with the crime scene. Unidentified men are seen in the area, and unusual activity at the scene is observed. A Time for Justice To halt the media frenzy, a formal inquiry is set up, but vital witnesses are not called, and a political cover-up looks likely. The Excalibur Foundation, an organization that seeks justice for political victims, decides to take up the case. They propose to hunt down Chuck Cornell themselves, and former French Foreign Legion sniper Dan Pierce is hired for the mission. During the operation to eliminate the Black Eagle, however, a political target comes into Dan's sights. Dan now holds the power to bring justice to the world; it's just a matter of squeezing the trigger.

Science as a Career Choice Bernice T. Edguson, Linda Beckman, 1973-09-28 How can we identify the young men and women who as social and behavioral scientists of tomorrow will do the needed research to resolve our burgeoning social problems? How can the most promising be attracted to an investigatory career? How can they become identified with the behaviors, attitudes, and values that persons in science share? A provocative body of literature about the psychology of the scientist and his career emerged in the post-Sputnik era. Drs. Edguson and Beckman bring together more than seventy of the most significant and representative studies. These range over childhood and family influences, academic experiences, motivations, interests, and intellectual and personality strengths that have been examined as precursors for choosing science as adult work. The psychological mechanisms involved in socializing a young person toward a scientific career are suggested in readings from the outstanding theoreticians in the field. Selections on scientific career lines, decisions, and options at various stages of work, and factors influencing goals and career development contribute to the understanding of the psychological life of the highly endowed and well-functioning professional adult. Through showing the certain completeness of

effort of what has been learned about the psychology of scientists to date the authors anticipate a resurgence of interest in the creative individual a renewed enthusiasm for application and a refocusing of research on the issues unique to the social and behavioral research scientist

Remember the first time you planted a seed and watched it sprout Or explored how a magnet attracted a nail If these questions bring back memories of joy and wonder then you understand the idea behind inquiry based science an approach to science education that challenges children to ask questions solve problems and develop scientific skills as well as gain knowledge Inquiry based science is based on research and experience both of which confirm that children learn science best when they engage in hands on science activities rather than read from a textbook The recent National Science Education Standards prepared by the National Research Council call for a revolution in science education They stress that the science taught must be based on active inquiry and that science should become a core activity in every grade starting in kindergarten This easy to read and practical book shows how to bring about the changes recommended in the standards It provides guidelines for planning and implementing an inquiry based science program in any school district The book is divided into three parts Building a Foundation for Change presents a rationale for inquiry based science and describes how teaching through inquiry supports the way children naturally learn It concludes with basic guidelines for planning a program School administrators teachers and parents will be especially interested in the second part The Nuts and Bolts of Change This section describes the five building blocks of an elementary science program Community and administrative support A developmentally appropriate curriculum Opportunities for professional development Materials support Appropriate assessment tools Together these five elements provide a working model of how to implement hands on science The third part Inquiry Centered Science in Practice presents profiles of the successful inquiry based science programs in districts nationwide These profiles show how the principles of hands on science can be adapted to different school settings If you want to improve the way science is taught in the elementary schools in your community Science for All Children is an indispensable resource
