

eTable B. Diagnosis of Diabetic Kidney Disease

Screening initiation

At the time of diagnosis of type 2 diabetes mellitus

Five years after diagnosis of type 1 diabetes

Screening frequency

Annually

Overt clinical findings consistent with diabetic kidney disease

Moderately increased albuminuria (i.e., KDIGO A2) in patients with type 1 diabetes for more than 10 years

Moderately increased albuminuria in the presence of diabetic retinopathy

Severely increased albuminuria (i.e., KDIGO A3)

Clinical findings that should prompt consideration of an alternative diagnosis

Absence of albuminuria in patients with stage 3a to 5 chronic kidney disease

Absence of diabetic retinopathy

Active urinary sediment (cells or casts)

Low GFR at the time of diagnosis

More than 30% reduction in GFR within two to three months after initiation of an angiotensin-converting enzyme inhibitor or angiotensin receptor blocker

Rapidly decreasing GFR (more than 4 mL per minute per 1.73 m² per year)

Rapidly increasing proteinuria or nephrotic syndrome

Refractory hypertension

Signs or symptoms of other systemic disease

GFR = glomerular filtration rate; KDIGO = Kidney Disease: Improving Global Outcomes.

Screening In Chronic Disease

**United States. Congress. Senate.
Special Committee on Aging**

Screening In Chronic Disease:

Screening in Chronic Disease Alan S. Morrison, 1985 Early detection or screening is vital in controlling chronic diseases but too little information has been available to help practitioners determine which screening procedures are worthwhile and how often and to whom they should be applied This timely new book presents the epidemiologic methods that can be used to answer such questions focusing on how to describe and measure changes in the natural history of disease brought on by early treatment lead time and prognostic selection The author explains how to assess the usefulness of screening in reducing morbidity and mortality and provides thorough descriptions of the experimental and case control approaches This is a valuable reference for students of epidemiology and biostatistics and for all who are concerned about the design analysis and interpretation of studies to evaluate screening

Multiphasic Screening for the Chronic Diseases United States. Health Protection Systems Development Program, 1968

Detection and Prevention of Chronic Disease Utilizing Multiphasic Health Screening Techniques United States. Congress. Senate. Special Committee on Aging. Subcommittee on Health of the Elderly, 1966

Detection and Prevention of Chronic Disease Utilizing Multiphasic Health Screening Techniques United States. Congress. Senate. Special Committee on Aging, 1966

Chronic Disease in the Twentieth Century George Weisz, 2014-05-01 How the evolving concept of chronic disease has affected patients and politics in the United States and Europe Long and recurring illnesses have burdened sick people and their doctors since ancient times but until recently the concept of chronic disease had limited significance Even lingering diseases like tuberculosis a leading cause of mortality did not inspire dedicated public health activities until the later decades of the nineteenth century when it became understood as a treatable infectious disease Historian of medicine George Weisz analyzes why the idea of chronic disease assumed critical importance in the twentieth century and how it acquired new meaning as one of the most serious problems facing national healthcare systems Chronic Disease in the Twentieth Century challenges the conventional wisdom that the concept of chronic disease emerged because medicine's ability to cure infectious disease led to changing patterns of disease Instead it suggests the concept was constructed and has evolved to serve a variety of political and social purposes How and why the concept developed differently in the United States the United Kingdom and France are central concerns of this work In the United States anxiety about chronic disease spread early in the twentieth century and was transformed in the 1950s and 1960s into a national crisis that helped shape healthcare reform In the United Kingdom the concept emerged only after World War II was associated almost exclusively with proper medical care for the elderly population and became closely linked to the development of geriatrics as a specialty In France the problems of elderly and infirm people were handled as technical and administrative matters until the 1950s and 1960s when medical treatment of elderly people emerged as a subset of their wider social marginality While an international consensus now exists regarding a chronic disease crisis that demands better forms of disease management the different paths taken by these countries during the twentieth century

continue to exert profound influence This book seeks to explain why among the innumerable problems faced by societies some problems in some places become viewed as critical public issues that shape health policy Detection and Prevention of Chronic Disease Utilizing Multiphasic Health Screening Techniques United States. Congress. Senate. Special Committee on Aging,1966 **Detection and Prevention of Chronic Disease Utilizing Multiphasic Health Screening Techniques** United States. Congress. Senate.
