Treatise on Zoology - Anatomy, Taxonomy, Biology. The Crustacea, Volume 9 Part C (2 vols) Peter Castro, Peter Davie, Danièle Guinot, Frederick Schram, Carel von Vaupel Klein, 2015-11-24 This volume 9C in two parts covers the Brachyura With the publication of the ninth volume in the Treatise on Zoology The Crustacea we departed from the sequence one would normally expect Some crustacean groups mainly comprising the Decapoda never had a French version produced and the organization and production of these new chapters began independently from the preparation of the other chapters and volumes Originally envisioned to encompass volume 9 of the series it quickly became evident that the depth of material for such a volume must involve the printing of separate fascicles The new chapters have now been completed and the production of volume 9 was started while volumes 3 through 8 were and in part still are in preparation with this vol 9C 1 vols 1 5 have also been published and vols 6 8 are being prepared **Geology and Paleontology of Seymour Island, Antarctic**

Peninsula Rodney M. Feldmann, Michael O. Woodburne, 1988 **Marine Decapod Crustacea** Gary C.B. Poore, Shane T. Ahyong, 2023-01-23 Decapod crustaceans shrimps crabs prawns and their allies are highly visible and important members of marine environments They are among the most charismatic of marine animals inhabiting beaches rocky shores and the deep sea hiding under stones burrowing in the sediment and nestling in among algae and many other microhabitats However most are difficult to identify by the specialist and amateur naturalist alike Marine Decapod Crustacea explains the anatomical features necessary for differentiating taxa and includes diagnoses and identification keys to all 189 families and 2121 genera of marine Decapoda Many decapods have vivid colours which are showcased in a selection of spectacular photographs of many representative species This volume provides an entry to the literature for taxonomists naturalists consultants ecologists

teachers and students wanting to identify local faunas and understand this diverse group

Marine Decapod Crustacea of Southern Australia Gary CB Poore, 2004-08-13 This book is a comprehensive guide to the identification of 800 species of decapod and stomatopod crustaceans from southern Australian marine waters. It is liberally illustrated with more than 1000 line drawings giving good views of many species as well as diagnostic illustrations. Details for each species include the authority, year of description, sometimes a common name, diagnosis, size, geographical distribution, and ecological and depth distribution. The chapter on the Stomatopoda is by Shane Ahyong. Sections within each chapter are hierarchical: species within genera within families, often with subfamilies as well. Identification is achieved through the use of dichotomous keys adapted from many originally published in the primary literature or developed from scratch. Some keys are to all Australian taxa but most are to southern Australian taxa only. The information in this book derives from over 200 years of collecting in southern Australian environments from the intertidal to the deep sea and publications in numerous journals in several languages. More than 800 of these papers and books are cited. Winner of the 2005 Whitley Award for Systematics.

The Crustacean Nervous System Konrad Wiese, 2013-04-17 Crustacean preparations have been successfully used for more than 50 years to investigate the principles which enable nerve cells and neural circuitry to perform in a wide variety of functions. The proud record of information of general significance obtained from crayfish and lobster nervous systems testifies that the use of an experimental system precisely matching theoretical and experimental requirements of a measurement is an essential part of the success. In some respects the secondarily diversified vertebrate and mammalian nervous systems pose severe obstacles to experimentation and measurement, whereas the crustacean nervous system recommends itself by being composed of individual neurons of unique morphology and physiology which can be used repeatedly in several preparations. Moreover, a restricted number of invariantly displayed behaviors enable the experimenter to correlate neuron activity with parts of the behavior easier. Experts use these advantages to focus on a well defined neuron and mechanism and to take a convincing measurement within a minimum amount of time. In this book, distinguished neurobiologists, the leading experts in the field, have joined efforts to present research using crustacean experimental systems. Thus they have contributed comprehensive information regarding a nervous system other than that of vertebrates and mammals that of crustaceans. The accumulated knowledge on the crustacean nervous system shows that it is clearly divergent in evolution but functions in a similar way to neuronal circuitry found in the vertebrate system and can be used to interpret it.

Walking Sideways Judith S. Weis, 2012-11-15 The world's nearly 7 000 species of crabs are immediately recognizable by their claws, sideways movement, stalked eyes, and thick outer shells. These common crustaceans are found internationally thriving in various habitats from the edge of the sea to the depths of the ocean in fresh water or on land. Despite having the same basic body type as decapod crustaceans, true crabs have heavy exoskeletons and ten limbs with front pincer claws. Crabs come in an enormous variety of shapes and sizes from the near microscopic to the giant Japanese spider crab. In *Walking Sideways*, Judith

S Weis provides an engaging and informative tour of the remarkable world of crabs highlighting their unique biology and natural history She introduces us to recently discovered crabs such as the Yeti crab found in deep sea vents explains what scientists are learning about blue and hermit crabs commonly found at the shore and gives us insight into the lifecycles of the king and Dungeness crabs typically seen only on dinner plates Among the topics Weis covers are the evolution and classification of crabs their habitats unique adaptations to water and land reproduction and development behavior ecology and threats including up to date research Crabs are of special interest to biologists for their communication behaviors sexual dimorphism and use of chemical stimuli and touch receptors and Weis explains the importance of new scientific discoveries In addition to the traditional ten legged crabs the book also treats those that appear eight legged including hermit crabs king crabs and sand crabs Sidebars address topics of special interest such as the relationship of lobsters to crabs and medical uses of compounds derived from horseshoe crabs which aren't really crabs While Weis emphasizes conservation and the threats that crabs face she also addresses the use of crabs as food detailing how crabs are caught and cooked and their commercial value from fisheries and aquaculture She highlights other interactions between crabs and people including keeping hermit crabs as pets or studying marine species in the laboratory and field Reminding us of characters such as The Little Mermaid's Sebastian and Sherman Lagoon's Hawthorne she also surveys the role of crabs in literature for both children and adults film and television as well in mythology and astrology With illustrations that offer delightful visual evidence of crab diversity and their unique behaviors Walking Sideways will appeal to anyone who has encountered these fascinating animals on the beach at an aquarium or in the kitchen
