Air Pollution Science for the 21st Century J. Austin, P. Brimblecombe, W.T. Sturges, 2002-10-31 Acid rain photochemistry long range transport of pollutants greenhouse gas emissions and aerosols have dominated tropospheric air pollution for the last 30 years of the 20th century At the start of the 21st century acid rain is subject to planned improvement in Europe and North America but is still a growing problem in Asia Tropospheric ozone is understood much better but the problem is still with us and desirable levels are difficult to achieve over continental Europe The heterogeneous chemistry that is responsible for ozone depletion in the stratosphere is now reasonably clear but there is on going interest in the sources and sinks of CFC chlorofluorocarbon replacements in the troposphere There is also increasing interest in indoor air quality

and the origin and health implications of atmospheric particles Perhaps most important on a global perspective intensive research has not yet determined the relationship between greenhouse gases aerosols and surface temperature The climactic implications of these are now more urgent than ever This book the first in the Developments in Environmental Science series consists of a collection of authoritative reviews and essays on the science and application of air pollution research at the start of this new century Barriers to Sustainable Transport Piet Rietveld, Roger R. Stough, 2005-02-25 The complexity of transportation systems and their negative social and environmental effects are today at the centre of attention This book focuses on the impact of institutions and regulatory systems on transport systems and travel behaviour While institutions appear to play an important role in the economic success of many countries this book considers the extent to which they also support sustainable development Controlling Automobile Air Pollution Virginia McConnell, 2018-12-20 This volume includes many of the most influential and interesting academic articles related to the economics of mobile source pollution control The papers included explore why vehicles and vehicle markets are unique provide estimates of the type and magnitude of the social costs of driving and examine estimation methods and estimates of the various elasticities of vehicle demand Analysis of the social costs and policies to reduce both traditional air pollutants and greenhouse gas emissions are included Selected articles review the range of evaluation of both regulatory and market based approaches to controlling emissions The complexity of the effects of different policies are emphasized and the unintended consequences of regulation are explored in the context of vehicle emissions reduction policies **Environmental Pollution and Waste Management** H.D. Kumar, 1998 This book aims at meeting the needs of students pursuing courses in a wide range of disciplines such as biology geography geology agriculture medicine environment public health engineering at colleges traditional and agricultural universities and institutes of technology Many of the complex environmental issues facing society today are mentioned briefly but the focus is on environmental and air pollution wastes and their management Unsustainable Transport David Banister, 2005-09-26 This book addresses the links between transport and sustainable urban development from an analysis of the global picture to issues in transport and energy intensity public policy and the institutional and organisational constraints on change The central part of the book explores these links in more detail at city level covering land use and development economic measures and the role that technology can play The final part looks for inspiration from events in developing countries and the means by which we can move from the unsustainable present to a more sustainable future
