

Experience with long-term rituximab use in a multiple sclerosis clinic

Megan E Barra, Dhruv Soni, Khac Huy Vo, Tanuja Chitnis and James M Stankiewicz

Abstract

Background: Rituximab is a monoclonal antibody directed at CD20 positive B-lymphocytes and a potential therapeutic option in the treatment of multiple sclerosis. The safety of recurrent dosing is not established.

Objectives: The objective of this work was to report the experience of long-term rituximab administration in a comprehensive multiple sclerosis care clinic.

Methods: This was a single-center retrospective observational analysis of patients receiving rituximab for the treatment of multiple sclerosis from 2004 to 2015. Different dosing regimens were reviewed to determine whether frequency or dose may affect safety. CD19 and CD20 counts were collected to evaluate B-cell suppression during therapy. Relapses, magnetic resonance imaging activity and rituximab-related adverse events were collected by chart review and prospective database entry.

Results: Of 107 patients included, the average duration of treatment was 33.2 months. Seventy-seven patients received recurrent rituximab dosing after initiation. CD19/20 reconstitution occurred in approximately 20% of patients at 6 months, regardless of dosing strategy. Despite CD19/20 counts of 0, three patients had relapses or magnetic resonance imaging activity. Mostly mild side effects in relation to therapy were seen, with the exception of three patients requiring hospitalization for urinary tract infections.

Conclusions: In our clinic population, rituximab was well tolerated and safe with recurrent administration.

Introduction

Evidence has accumulated suggesting that B cells are involved either directly or indirectly in the pathophysiology of multiple sclerosis (MS). Rituximab is a monoclonal antibody directed at CD20 positive B-lymphocytes resulting in cell-mediated apoptosis.¹ A phase II double blinded randomized controlled trial of rituximab in a relapsing MS population demonstrated robust efficacy on clinical measures and magnetic resonance imaging (MRI) with an acceptable safety profile.² Ocrelizumab was recently shown to be effective and safe in two phase III trials conducted in relapsing–remitting patients showing an annualized relapse rate reduction of 46/47%, 43/37% risk reduction in confirmed disability progression and 94/95% reduction in total number of gadolinium enhancing lesions in the OPERA I and II

studies, respectively.³ Ofatumumab was also successful in phase II.⁴ These monoclonal antibodies all deplete CD20 B cells, but differ in their chimeric (rituximab), humanized (ocrelizumab), or fully human (ofatumumab) molecular composition as well as their ability to stimulate complement and antibody dependent cellular cytotoxic effector mechanisms.

The safety profile of recurrent long-term dosing is not yet established in an MS population. Rituximab has been used extensively in many patient populations after its approval in 1997 for non-Hodgkin's lymphoma. Although overall patient exposure is unknown, over 300,000 patients with rheumatoid arthritis are known to have been treated with rituximab. A recent study demonstrated that rituximab

Victims and Survivors of Nazi Human Experiments Paul Weindling, 2014-12-18 While the coerced human experiments are notorious among all the atrocities under National Socialism they have been marginalised by mainstream historians This book seeks to remedy the marginalisation and to place the experiments in the context of the broad history of National Socialism and the Holocaust Paul Weindling bases this study on the reconstruction of a victim group through individual victims life histories and by weaving the victims experiences collectively together in terms of

different groupings especially gender ethnicity and religion age and nationality The timing of the experiments where they occurred how many victims there were and who they were is analysed as are hitherto under researched aspects such as Nazi anatomy and executions The experiments are also linked more broadly to major elements in the dynamic and fluid Nazi power structure and the implementation of racial policies The approach is informed by social history from below exploring both the rationales and motives of perpetrators but assessing these critically in the light of victim narratives
