Urban Nature and Childhoods Iris Duhn, Karen Malone, Marek

Tesar, 2020-06-29 This book challenges the notion that nature is a city's opposite and addresses the often overlooked concept of urban nature and how it relates to children's experiences of environmental education. The idea of nature deficit as well as concerns that children in cities lack for experiences of nature speaks to the anxieties that underpin urban living and a lack of natural experiences. The contributors to this volume provide insights into a more complex understanding of urban nature and of children's experiences of urban nature. What is learned if nature is not somewhere else but right here wherever we are? What does it mean for children's environmental learning if nature is a relationship and not an entity? How can such a relational understanding of urban nature and childhood support more sustainable and more inclusive urban living? In raising challenging questions about childhoods and urban nature, this book will stimulate much needed discussion to provoke new imaginings for researchers in environmental education, childhood studies and urban studies. This book was originally published as a special issue of *Environmental Education Research*.

Children, Nature and Cities Claire Freeman, Yolanda van Heezik, 2018-06-14 That children need nature for health and well-being is widely accepted, but what type of nature? Specifically, what type of nature is not only necessary but realistically available in the complex and rapidly changing worlds that children currently live in? This book examines child-nature definitions through two related concepts: the need for connecting to nature and the processes by which opportunities for such contact can be enhanced. It analyses the available nature from a scientific perspective of habitats, species and environments together with the role of planning to identify how children in cities can and do connect with nature. This book challenges the notion of a universal child and childhood by recognizing children's diverse life worlds and experiences which guide them into different and complex ways of interacting.

with the natural world Unfortunately not all children have the freedom to access the nature that is present in the cities where they live This book addresses the challenge of designing biodiverse cities in which nature is readily accessible to children

Children and their Urban Environment Claire Freeman,Paul Tranter,2012-10-02 In our fast changing urban world the impacts of social and environmental change on children are often overlooked Children and their Urban Environment examines these impacts in detail looking at the key activities spaces and experiences children have and how these can be managed to ensure that children benefit from change The authors highlight the importance of planners architects and housing professionals in creating positive environments for children and involving them in the planning process They argue that children s lives are becoming simultaneously both richer and more deprived and that despite apparently increasing wealth disparities between children are increasing further Each chapter includes international examples of good practice and policy innovations for redressing the balance in favour of child supportive environments The book seeks to embrace childhood as a time of freedom social engagement and environmental adventure and to encourage creation of environments that better meet the needs of children The authors argue that in doing so we will build more sustainable neighbourhoods cities and societies for the future
