Global Perspectives on Underutilized Crops Munir Ozturk,Khalid Rehman Hakeem,Muhammad Ashraf,Muhammad Sajid Aqeel Ahmad,2018-05-17 Increase in world population extreme weather conditions decrease in fresh water supplies and changes of dietary habits are major issues that affect global food security We are expected to face the challenges of land use by 2050 because population will reach 9 billion while agricultural productivity losses are expected due to overuse of lands How can we feed the next generations in a manner that respects our finite natural resources Managing our resources in a sustainable way have only begun for selected crops Much remains to be done to increase food yield Cropping practices capable of sustainable production need to be elaborated especially in fragile ecosystems Typical applications will include the improvement and use of genetic resources crop management and diversification diffusion of improved varieties development of cropping systems sustainable cropping systems for areas prone to environmental degradation use of agro ecological data for crop production forecasting and networks for regional coordination and data exchange The impetus behind this book is to bring attention to a cropping system that bears direct relevance to sustainable agriculture and food security Underutilized crops are found in numerous agricultural ecosystems and often survive mainly in marginal areas It is timely to review their status because in recent decades scientific and economic interests have emerged which focus on lesser known cultivated species Underutilized crops have a great potential to alleviate hunger directly through increasing food production in challenging environments where major crops are severely limited Global Perspectives on Underutilized Crops is therefore topical and highlights the unmet agricultural challenges that we face today This book is an important resource for students and researchers of crop science and agricultural policy makers

Nester,Desh Pal S. Verma,2013-04-17 Research on the interaction between plants and microbes continues to attract increasing attention both within the field as well as in the scientific community at large Many of the major scientific journals have recently reviewed various aspects of the field Several papers dealing with plant microbe interactions have been featured on the covers of scientific publications in the past several months and the lay press have recently presented feature articles of this field An additional sign of the interest in this field is that the International Society of Molecular Plant Microbe Interactions has almost 500 members This book is a collection of the papers that were given at the Sixth International Symposium on the Molecular Genetics of Plant Microbe Interactions which was held in Seattle Washington in July 1992 Approximately 650 scientists attended and approximately 50 lectures covering the topics of Agrobacterium plant interactions Rhizobium plant interactions bacteria plant interactions fungal plant interactions and new aspects of biotechnology were presented In addition many sessions were devoted to the plant response to the microbe Over 400 posters were presented of which the authors of 20 were selected to give an oral presentation These

papers are included in this volume as well. The symposium also included speakers whose research interests are not directly related to plant-microbe interactions but who are at the cutting edge of research areas that impact on the theme of the symposium. These individuals kindly agreed to summarize their talks and their papers are also included.

Current Issues in Plant Molecular and Cellular Biology M. Terzi, R. Cella, A. Falavigna, 2012-12-06. Plant cell and tissue culture is a relevant area of experimental biology that has been developed for some decades to become an indispensable tool of plant biotechnology. Progress in this area sometimes tumultuous has been regularly recorded by the proceedings of the congresses of the International Association for Plant Tissue Culture which have been held every four years in several continents. This book reports plenary lectures, keynote lectures and invited oral presentations given at the last congress held in Florence. It is a useful reference guide both for established scientists and students on both traditional and emerging fields of plant biology. The following topics are covered: In vitro Culture and Plant Regeneration, Plant Propagation, Haploids, Somatic Hybridisation, Reproductive Systems, Genetic Variability, Gene Transfer, Organelles, Biotechnology of Tropical and Subtropical Species, Agronomic Traits, Somatic Embryogenesis, Meristems, Cell Surface, Growth Regulators, Reception and Transduction of Signals, Gene Expression under Extreme Conditions, Primary Metabolism, Secondary Metabolism, Transport, Large Scale Production.

Molecular Breeding in Wheat, Maize and Sorghum Mohammad Anwar Hossain,Mobashwer Alam,Saman Seneweera,Sujay Rakshit,Robert J. Henry,2021-06-30 The global population is projected to reach almost 10 billion by 2050 and food and feed production will need to increase by 70% Wheat maize and sorghum are three key cereals which provide nutrition for the majority of the world s population Their production is affected by various abiotic stresses which cause significant yield losses The effects of climate change also increase the frequency and severity of such abiotic stresses Molecular breeding technologies offer real hope for improving crop yields Although significant progress has been made over the last few years there is still a need to bridge the large gap between yields in the most favorable and most stressful conditions
