Regional Frequency Analysis J. R. M. Hosking, James R. Wallis, 1997-04-28 Extreme environmental events such as floods droughts rainstorms and high winds have severe consequences for human society Regional frequency analysis helps to solve the problem of estimating the frequency of these rare events at one site by using data from several sites This book is the first complete account of the L moment approach to regional frequency analysis Regional Frequency Analysis comprehensively describes the theoretical background to the subject is rich in practical advice for users and contains detailed examples that illustrate the approach This book will be of great value to hydrologists atmospheric scientists and civil engineers concerned with environmental extremes Regional Frequency Analysis Jonathan Richard Morley Hosking, 1997

Statistical Hydrology Mauro Naghettini,2016-10-26 This textbook covers the main applications of statistical methods in hydrology It is written for upper undergraduate and graduate students but can be used as a helpful guide for hydrologists geographers meteorologists and engineers The book is very useful for teaching as it covers the main topics of the subject and contains many worked out examples and proposed exercises Starting from simple notions of the essential graphical examination of hydrological data the book gives a complete account of the role that probability considerations must play during modelling diagnosis of model fit prediction and evaluating the uncertainty in model predictions including the essence of Bayesian application in hydrology and statistical methods under nonstationarity The book also offers a comprehensive and useful discussion on subjective topics such as the selection of probability distributions suitable for hydrological variables On a practical level it explains MS Excel charting and computing capabilities demonstrates the use of Winbugs free software to solve Monte Carlo Markov Chain MCMC simulations and gives examples of free R code to solve nonstationary models with nonlinear link functions with climate covariates *New Developments in Quantitative Psychology* Roger E. Millsap,L.

Andries van der Ark,Daniel M. Bolt,Carol M. Woods,2014-02-04 The 77th Annual International Meeting of the Psychometric

Society IMPS brought together quantitative researchers who focus on methods relevant to psychology. The conference included workshops, invited talks by well-known scholars, and presentations of submitted papers and posters. It was hosted by the University of Nebraska Lincoln and took place between the 9th and 12th of July 2012. The chapters of this volume are based on presentations from the meeting and reflect the latest work in the field. Topics with a primarily measurement focus include studies of item response theory, computerized adaptive testing, cognitive diagnostic modeling, and psychological scaling. Additional psychometric topics relate to structural equation modeling, factor analysis, causal modeling, mediation, missing data methods, and longitudinal data analysis, among others. The papers in this volume will be especially useful for researchers, graduate students, and other quantitative researchers in the social sciences who use quantitative methods, particularly psychologists. Most readers will benefit from some prior knowledge of statistical methods in reading the chapters.

Progress in Renewable Energies Offshore C. Guedes Soares, 2016-11-18. *Progress in Renewable Energies Offshore* includes the papers presented in the 2nd International Conference on Renewable Energies Offshore RENEW2016, Lisbon, Portugal, 24-26 October 2016. The scope of the book is broad, covering all aspects of renewable energies offshore activities, such as resource assessment, wind energy, wave energy, tidal energy, ocean energy, devices, multiuse platforms, PTO design, grid connection, economic assessment, installation, and maintenance planning. The contents of the present book are organized in these main subject areas corresponding to the sessions in the Conference. The conference reflects the importance of the renewable energies offshore worldwide and is an opportunity to contribute to the exchange of information on the developments and experience obtained in concept development, design, and operation of these devices. *Progress in Renewable Energies Offshore* has as main target academics and professionals working in the related areas of renewable energies.

Extreme Hydrology and Climate Variability Assefa Melesse, Wossenu Abtew, Gabriel Senay, 2019-07-03. *Extreme Hydrology and Climate Variability: Monitoring, Modelling, Adaptation, and Mitigation* is a compilation of contributions by experts from around the world who discuss extreme hydrology topics from monitoring to modeling and management. With extreme climatic and hydrologic events becoming so frequent, this book is a critical source adding knowledge to the science of extreme hydrology. Topics covered include hydrometeorology, monitoring, climate variability and trends, hydrological variability and trends, landscape dynamics, droughts, flood processes, and extreme events management, adaptation, and mitigation. Each of the book's chapters provides background and theoretical foundations, followed by approaches used and results of the applied studies. This book will be highly used by water resource managers and extreme event researchers who are interested in understanding the processes and teleconnectivity of large-scale climate dynamics and extreme events, predictability, simulation, and intervention measures. It presents datasets used and methods followed to support the findings, including allowing readers to follow these steps in their own research. It provides variable methodological approaches, thus giving the reader multiple hydrological modeling information to use in their work. It includes a variety of case studies, thus

making the context of the book relatable to everyday working situations for those studying extreme hydrology Discusses extreme event management including adaption and mitigation

Shaw,Keith J. Beven,Nick A. Chappell,Rob Lamb,2017-12-21 Hydrology in Practice is an excellent and very successful introductory text for engineering hydrology students who go on to be practitioners in consultancies the Environment Agency and elsewhere This fourth edition of Hydrology in Practice while retaining all that is excellent about its predecessor by Elizabeth M Shaw replaces the material on the Flood Studies Report with an equivalent section on the methods of the Flood Estimation Handbook and its revisions Other completely revised sections on instrumentation and modelling reflect the many changes that have occurred over recent years The updated text has taken advantage of the extensive practical experience of the staff of JBA Consulting who use the methods described on a day to day basis Topical case studies further enhance the text and the way in which students at undergraduate and MSc level can relate to it The fourth edition will also have a wider appeal outside the UK by including new material on hydrological processes which also relate to courses in geography and environmental science departments In this respect the book draws on the expertise of Keith J Beven and Nick A Chappell who have extensive experience of field hydrological studies in a variety of different environments and have taught undergraduate hydrology courses for many years Second and final year undergraduate and MSc students of hydrology in engineering environmental science and geography departments across the globe as well as professionals in environmental protection agencies and consultancies will find this book invaluable It is likely to be the course text for every undergraduate MSc hydrology course in the UK and in many cases overseas too **Copulas and Its Application in Hydrology and Water Resources** Lu Chen,Shenglian Guo,2018-06-28 This book presents an overview of copula theory and its application in hydrology and provides valuable insights useful methods and practical applications for multivariate hydrological analysis using copulas In addition it extends the traditional bivariate model to trivariate or multivariate models The specific

applications covered include the study of flood frequency analysis drought frequency analysis dependence analysis flood coincidence risk analysis and statistical simulation using copulas The book offers a valuable guide for researchers scientists and engineers working in hydrology and water resources and will also benefit graduate or doctoral students with a basic grasp of copula functions who want to learn about the latest research developments in the field
