Regional Science Perspectives In Economic Analysis A Festschrift In Memory Of Benjamin H Stevens:

Regional Science Perspectives in Economic Analysis M. L. Lahr, R. E. Miller, 2001-03-08 It is the intention of the editors to make available with this book a selection of current work in regional economics and regional science Great Minds in Regional Science, Vol. 3 Peter Batey, David Plane, 2025-07-31 This book is the third volume in a series on Great Minds in Regional Science which seeks to present a contemporary view on the scientific relevance of the work done by great thinkers in regional science This volume presents among others Walter Christaller Benjamin H Stevens William Alonso and François Perroux Each chapter combines factual biographical information about the Great Mind a description of their major contributions and a discussion of the broader context of their work as well as an assessment of its current relevance scientific recognition and policy impact The book attempts to fill a gap in our knowledge and to respond to the growing interest in the formation and development of the field of regional science and its key influential figures **Economics of an Innovation**

System Tsutomu Harada, 2019-03-04 Existing literature looks at national innovation systems from the perspective of either inside the black box or outside the black box This is the first book that analyzes both the inside and outside of the black box using a general equilibrium framework The book looks at what is outside the black box and provides models of path dependent endogenous growth examines the dynamics of the black box from the intersectoral perspective of the economy and proposes an innovation flow matrix It also takes into account both business cycles and endogenous innovation in the unified New Keynesian dynamic stochastic general equilibrium DSGE model and examines how business cycles and other policy shocks affect endogenous innovation The unified treatment of the national innovation system from perspectives both inside and outside the black box using rigorous economic models and empirical analyses makes this an enlightening work shedding new light on innovation economics **Spectral Theory of Value and Actual Economies** Theodore

Mariolis, Nikolaos Rodousakis, George Soklis, 2021-05-29 This book develops a unified treatment of the income distribution capital value problems with respect to actual economies and then gradually turns to the issues of effective demand and capitalist accumulation fluctuations from both political economy and economic policy perspectives That treatment on the one hand places produced means of production positive profits and capital accumulation at the centre of the analysis and on the other hand is analytically based on the modern control theory Hence the authors investigation is concerned with input output representations of actual single and joint production heterogeneous labour and open economies zeroes in on the characteristic value distributions of the system matrices and finally derives meaningful theoretical results consistent with the empirical evidence and vice versa The main topics addressed are the uncontrollable unobservable aspects of the real world economies the powerful low order spectral approximations and reconstructions of the inter industry structure of production value distributive variables relationships the critical constructive appraisal of both mainstream and radical theories of value the matrix demand multipliers and demand switching policies in heterogeneous capital worlds and the circular inter actions

amongst income distribution effective demand accumulation and technical conditions of production Written on the occasion of the 60th anniversary of the publication of both Piero Sraffa's *Production of Commodities by Means of Commodities* and Rudolf E Kalman's paper *On the general theory of control systems* this book provides a consistent and comprehensive framework for theoretical empirical and economic policy research Entrepreneurship and Dynamics in the Knowledge Economy Charlie Karlsson, Börje Johansson, Roger Stough, 2006-09-27 The phenomenon of entrepreneurship has attracted researchers from a variety of disciplines and a diverse number of analytical approaches Currently there is a considerable amount of confusion and a variety of conflicting theories which are being used interchangeably and ambiguously In this important new book the authors argue that there are analytically distinct forms of entrepreneurship each of them having an individual logic of their own They highlight the role of individual economic agents with endowments of new knowledge or new combinations of old knowledge as entrepreneurs and thus identify them as dynamic factors in the knowledge economy Overall this book not only provides a contemporary overview of current research in the field but also summarizes the policy conclusions that can be drawn from current research *Economic Insights from Input-Output Tables for Asia and the Pacific* Asian Development Bank, 2022-07-01 This publication features a broad suite of statistical indicators characterizing the supply and use interactions of economic sectors within and across 25 economies of Asia and the Pacific The indicators include sector and economy specific multipliers and linkages trade orientation and openness participation in global value chains patterns of product specialization and domestic agglomeration among many others Supplementing these analyses are special chapters on the economic impacts of the COVID 19 pandemic the contribution of the digital economy and the significance of activities related to real estate All analyses and indicators draw on the Multiregional Input Output database maintained by the Asian Development Bank **East Asia's De Facto Economic Integration** Daisuke Hiratsuka, 2006-10-31 This book presents a deeper understanding of the on going de facto economic integration in East Asia looking at the extent of economic integration what sort of integration has been accomplished and comparing the level of integration reached and the path followed to that of the European Union *Environmental Economics and Computable General Equilibrium Analysis* John R. Madden, Hiroyuki Shibusawa, Yoshiro Higano, 2020-07-11 This book addresses major issues such as a growing world energy demand environmental degradation due to anthropogenic greenhouse gas GHG emission and risk management of disastrous events such as pandemics abnormal climate and earthquakes Using cutting edge analytical tools particularly computable general equilibrium CGE modelling the analyses are focused on a very wide range of policy relevant economic questions for the Asia Pacific region especially for Japan China India Vietnam and smaller nations including Brunei Timor Leste and Fiji The first part considers a the effects of climate change on agriculture sectors energy policies and future GHG emission trends b adaptation to climate changes in energy policy and its impacts on the economies and c risk management of catastrophic events such as global pandemics The second part examines a energy environmental

issues b economic impacts of natural disaster and depopulation and c effects of informatics development on risk management using CGE modelling and other methods in regional science fields Contributors are internationally active leading CGE modellers and environmental economists The book should be greatly beneficial for scholars and graduate students as well as policy makers who are interested in the economic effects and management of risks relating to climate change and disastrous events

Input-Output Analysis Ronald E. Miller, Peter D. Blair, 2009-07-30 This edition of a classic textbook is an essential reference for students and scholars in the input output research and applications community New topics covered include SAMs and extended input output models and their connection to input output data structural decomposition analysis SDA multiplier decompositions identifying important coefficients and international input output models

Rethinking Input-Output Analysis Jan Oosterhaven, 2022-06-17 This textbook helps students to understand the social economic and environmental importance of the mutual relations between industries in the same and in different regions and nations and demonstrates how to model these relations using regional interregional and international input output IO models It enables readers to extend these basic IO models with endogenous household expenditures to employ supply use tables SUTs that explicitly distinguish the products used and sold by industry and to use social accounting matrices SAMs that detail the generation redistribution and spending of income In addition to the standard demand driven IO quantity model and its accompanying cost push IO price model the book also discusses the economic assumptions and usefulness of the supply driven IO quantity model and its accompanying revenue pull IO price model The final chapters highlight three main applications of the IO model 1 economic impact analysis of negative supply shocks as caused by for example natural disasters 2 linkages key sector and cluster analysis 3 structural decomposition analysis especially of regional interregional and international growth and demonstrate the strengths and weaknesses of these IO applications Written for graduate students of regional and spatial science as well as for economists and planners this book provides a better understanding of the foundations the power the applicability and the limitations of input output analysis The second completely revised edition expands on updating IO tables modelling the disaster reconstruction phase and includes an appendix on the necessary matrix algebra
