is a well known author of books on neural networks An authoritative book dealing with cutting edge technology This book has no competition **Computational Ecology: Artificial Neural Networks And Their Applications** Wenjun

Zhang, 2010-06-25 Due to the complexity and non linearity of most ecological problems artificial neural networks ANNs have attracted attention from ecologists and environmental scientists in recent years As these networks are increasingly being used in ecology for modeling simulation function approximation prediction classification and data mining this unique and self contained book will be the first comprehensive treatment of this subject by providing readers with overall and in depth knowledge on algorithms programs and applications of ANNs in ecology Moreover a new area of ecology i e computational ecology is proposed and its scopes and objectives are defined and discussed Computational Ecology consists of two parts the first describes the methods and algorithms of ANNs interpretability and mathematical generalization of neural networks Matlab neural network toolkit etc while the second provides case studies of applications of ANNs in ecology Matlab codes and comparisons of ANNs with conventional methods This publication will be a valuable reference for research scientists university teachers graduate students and high level undergraduates in the areas of ecology environmental sciences and computational science **Meshfree Approximation Methods With Matlab (With Cd-rom)** Gregory E

Fasshauer, 2007-04-17 Meshfree approximation methods are a relatively new area of research and there are only a few books covering it at present Whereas other works focus almost entirely on theoretical aspects or applications in the engineering field this book provides the salient theoretical results needed for a basic understanding of meshfree approximation methods The emphasis here is on a hands on approach that includes MATLAB routines for all basic operations Meshfree approximation methods such as radial basis function and moving least squares method are discussed from a scattered data approximation and partial differential equations point of view A good balance is supplied between the necessary theory and implementation in terms of many MATLAB programs with examples and applications to illustrate key points Used as class notes for graduate courses at Northwestern University Illinois Institute of Technology and Vanderbilt University this book will appeal to both mathematics and engineering graduate students **Soft Computing and Intelligent Systems** Madan

Volume Set Radim Bris, Carlos Guedes Soares, Sebastián Martorell, 2009-08-20 Containing papers presented at the 18th European Safety and Reliability Conference Esrel 2009 in Prague Czech Republic September 2009 Reliability Risk and Safety Theory and Applications will be of interest for academics and professionals working in a wide range of industrial and governmental sectors including civil and environmental engineering energy production and distribution information technology and telecommunications critical infrastructures and insurance and finance Innovations in Neural Information Paradigms and Applications Monica Bianchini, Marco Maggini, Franco Scarselli, 2009-10-13 Tremendous advances in all disciplines including engineering science health care business avionics management and so on can also be attributed to the development of artificial intelligence paradigms In fact researchers are always interested in desi ing machines which can

mimic the human behaviour in a limited way Therefore the study of neural information processing paradigms have generated great interest among researchers in that machine learning borrowing features from human intelligence and applying them as algorithms in a computer friendly way involves not only Mathematics and Computer Science but also Biology Psychology Cognition and Philosophy among many other disciplines Generally speaking computers are fundamentally well suited for performing automatic computations based on fixed programmed rules i.e. in facing efficiently and reliably monotonous tasks often extremely time consuming from a human point of view Nevertheless unlike humans computers have troubles in understanding specific situations and adapting to new working environments Artificial intelligence and in particular machine learning techniques aim at improving computers behaviour in tackling such complex tasks On the other hand humans have an interesting approach to problem solving based on abstract thought high level deliberative reasoning and pattern recognition Artificial intelligence can help us understanding this process by recreating it then potentially enabling us to enhance it beyond our current capabilities
