Spiller, Mark Strauss, Edgar E. Vidal, Mingming Zhang, 2023-02-13 This collection addresses new research and technology for increased efficiency energy reduction and waste minimization in mineral processing extractive metallurgy and recycling Professor Patrick R Taylor and his students have been studying these topics for the past 45 years Chapters include new directions in Mineral Processing Hydrometallurgy Pyrometallurgy Electrometallurgy Metals and E waste recycling Waste minimization including by product recovery Innovations in metallurgical engineering education and curriculum development     *Flash Smelting* W. G. Davenport, E. H. Partelpoeg, 2015-05-11 Flash Smelting Analysis Control and Optimization deals with the analysis control and optimization of flash smelting This book explores flash smelting in general and Outokumpu and Inco flash smelting in particular and also presents a mathematical description for the flash smelting process A set of mass and heat balance equations that can be used to describe steady state smelting under autogenous or nearautogenous smelting conditions is developed This text has 20 chapters and begins with an overview of flash smelting and its products the main raw materials of copper flash smelting chemical reactions in the flash furnace impurities in the concentrates that are fed to the flash furnace and the operation of industrial flash furnaces Attention then turns to Outokumpu flash smelting In o flash smelting and mathematical representation of flash smelting The chapters that follow focus on the effects of blast preheat on flash smelting the combustion of fossil fuel in the flash furnace and the effect of matte grade on the fossil fuel industrial oxygen and blast preheat requirements of flash smelting Equations are used to determine the effects of such factors as concentrate composition blast temperature and dust carryout and as the basis for optimizing and controlling the flash smelting process This book will be of interest to both mathematicians and metallurgists     *Extractive Metallurgy of Copper* A.K. Biswas, W.G. Davenport, 2013-10-22 A completely revised and up to date edition containing comprehensive industrial data The many

significant changes which occurred during the 1980s and 1990s are chronicled Modern high intensity smelting processes are presented in detail specifically flash Contop Isasmelt Noranda Teniente and direct to blister smelting Considerable attention is paid to the control of SO<sub>2</sub> emissions and manufacture of H<sub>2</sub>SO<sub>4</sub> Recent developments in electrorefining particularly stainless steel cathode technology are examined Leaching solvent extraction and electrowinning are evaluated together with their impact upon optimizing mineral resource utilization The volume targets the recycling of copper and copper alloy scrap as an increasingly important source of copper and copper alloys Copper quality control is also discussed and the book incorporates an important section on extraction economics Each chapter is followed by a summary of concepts previously described and offers suggested further reading and references

**Extractive Metallurgy of Copper** Mark E.

Schlesinger, Kathryn C. Sole, William G. Davenport, 2011-07-26 This multi author new edition revises and updates the classic reference by William G Davenport et al winner of among other awards the 2003 AIME Mineral Industry Educator of the Year Award for inspiring students in the pursuit of clarity providing fully updated coverage of the copper production process encompassing topics as diverse as environmental technology for wind and solar energy transmission treatment of waste by products and recycling of electronic scrap for potential alternative technology implementation The authors examine industrially grounded treatments of process fundamentals and the beneficiation of raw materials smelting and converting hydrometallurgical processes and refining technology for a mine to market perspective from primary and secondary raw materials extraction to shipping of rod or billet to customers The modern coverage of the work includes bath smelting processes such as Ausmelt and Isasmelt which have become state of the art in sulfide concentrate smelting and converting Drawing on extensive international industrial consultancies within working plants this work describes in depth the complete copper production process starting from both primary and secondary raw materials and ending with rod or billet being shipped to customers The work focuses particularly on currently used industrial processes used to turn raw materials into refined copper metal rather than ideas working only on paper New areas of coverage include the environmentally appropriate uses of copper cables in power transmission for wind and solar energy sources the recycling of electronic scrap as an important new feedstock to the copper industry and state of the art Ausmelt and Isasmelt bath smelting processes for sulfide concentrate smelting and converting
