Reinventing Fire Amory Lovins, 2013-09-11. Oil and coal have built our civilization, created our wealth, and enriched the lives of billions. Yet their rising costs to our security, economy, health, and environment are starting to outweigh their benefits. Moreover, the tipping point where alternatives work better and compete purely on cost is not decades in the future; it is here and now. And that tipping point has become the fulcrum of economic transformation. In *Reinventing Fire*, Amory Lovins and the Rocky Mountain Institute offer a new vision to revitalize business models and win the clean energy race, not forced by public policy but led by business for long-term advantage. This independent and rigorous account offers market-based solutions integrating transportation, buildings, industry, and electricity. It maps pathways for running a 158% bigger US economy in 2050 but needing no oil, no coal, no nuclear energy, one-third less natural gas, and no new inventions. This transition would cost 5 trillion less than business as usual without counting fossil fuels' huge hidden costs. Whether you care most about profits and jobs or national security or environmental stewardship, climate, and health, *Reinventing Fire* makes sense. It's a story of astounding opportunities for creating the new energy era. Publisher description.

Toward a Sustainable Future, 1997. Identifies some of the challenges that lie ahead in managing transportation's long-term environmental effects and the kinds of research and preparations that are needed to inform policy and meet these challenges. Although the report does not recommend specific policies to pursue, it identifies some of the issues and uncertainties that will need to be addressed in evaluating them.
