Reinventing The Factory Productivity Breakthroughs In Manufacturing Today:

Reinventing the Factory II Roy L. Harmon, Leroy D. Peterson, 1992 Documents more than a hundred real life applications of productivity improvement *Reinventing the Warehouse* Roy L. Harmon, 1993 Having successfully reinvented the factory in his previous books Harmon extends his discussion of productivity from the factory of the future to the 21st century warehouse He illustrates real life applications of important warehousing improvements in more than 50 companies throughout the world Includes examples from GM IBM Xerox 3M and others 150 line drawings **Advances in Production Management Systems** E. Eloranta, 2012-12-02 This book is divided into four sections invited papers principles systems and techniques The invited papers form an extensive overview of the state of the art of production management The themes range from the everlasting hunt for better productivity to the implications of CIM architectures particularly CIM OSA for production management The other three sections of the book look at the various problems affecting production management One of the characteristics of modern production management is the need for better principles systems and techniques for interorganizational production management Another topic of crucial relevance is the necessity to master not only repetitive manufacturing but also one of a kind product manufacturing From the managerial point of view the forecast based make to stock principles have proven insufficient with market forces demanding fast and reliable deliveries of customer oriented products The goals of production management have been re evaluated as a result *Reinventing the Factory* Roy L. Harmon, Leroy D. Peterson, 1990 The factory of the future is here We have the technology and professional knowledge say leading manufacturing consultants Roy Harmon and Leroy Peterson to implement revolutionary concepts that many managers might regard as futuristic In this path breaking book Harmon and Peterson move beyond theory to document more than a hundred real life applications of productivity improvement from the focused factory and assembly process design to the plantwide plan gathered from Andersen Consulting Arthur Andersen Co s offices around the world The reorganization of existing plants into multiple factories within a factory is the single most important feature of productivity improvement according to Harmon and Peterson These smaller units known as subplants are honed to the smallest practical size to ensure the highest level of productivity Multiple subplants can be clustered to focus accountability and authority for production of product families into easily managed groups of processes With hundreds of diagrams and using examples of companies that operate focused factories in dozens of countries Harmon and Peterson detail both the physical and organizational changes required to make the focused factory a successful and profitable feature of a plant s modernization In addition to creating subplants and subplant clusters Harmon and Peterson show how manufacturers can dramatically increase productivity by adopting a plantwide plan In its most basic form the plantwide plan is a layout of a single factory It includes to the extent practical not only the ideal layout but also step by step strategies for movement of individual processes from their current locations in the factory to final target destinations Harmon and Peterson explain how managers can use the plantwide plan to

eliminate the common problem of compromising ideals too early to accommodate assumed constraints and turn an existing factory into a competitive factory of the future today Flexibility creativity and dynamic planning are key concepts for attaining superior manufacturing results For plant modernization to be profitable the organizational structure must keep pace Achieving world class status is not enough The new hallmark of excellence must be continuous improvement to maintain a superior position The plans and suggestions outlined in *Reinventing The Factory* allow the entrepreneur the responsibility and authority to effect ongoing improvements and render processes adaptable to reflect additions or removals of product lines changes in sales volume over time and modifications resulting from previous or concurrent improvements Harmon and Peterson provide the valuable tools and methods necessary to attain such goals They highlight the dynamic nature of progress itself and show how managers can overcome the most tenacious habit the resistance to change
