Approaches to Software Testing Jens Grabowski, Brian Nielsen, 2005-02-22 Testing often accounts for more than 50% of

the required effort during system development The challenge for research is to reduce these costs by providing new methods for the specification and generation of high quality tests Experience has shown that the use of formal methods in testing represents a very important means for improving the testing process Formal methods allow for the analysis and interpretation of models in a rigorous and precise mathematical manner The use of formal methods is not restricted to system models only Test models may also be examined Analyzing system models provides the possibility of generating complete test suites in a systematic and possibly automated manner whereas examining test models allows for the detection of design errors in test suites and their optimization with respect to readability or compilation and execution time Due to the numerous possibilities for their application formal methods have become more and more popular in recent years The Formal Approaches in Software Testing FATES workshop series also benefits from the growing popularity of formal methods After the workshops in Aalborg Denmark 2001 Brno Czech Republic 2002 and Montreal Canada 2003 FATES 2004 in Linz Austria was the fourth workshop of this series Similar to the workshop in 2003 FATES 2004 was organized in a liaison with the IEEE ACM Conference on Automated Software Engineering ASE 2004 FATES 2004 received 41 submissions Each submission was reviewed by at least three independent reviewers from the Program Committee with the help of some additional reviewers Based on their evaluations 14 full papers and one work in progress paper from 11 different countries were selected for presentation
