

The Relativity of Wrong

by Isaac Asimov

I received a letter from a reader the other day. It was handwritten in crabbed penmanship so that it was very difficult to read. Nevertheless, I tried to make it out just in case it might prove to be important.

In the first sentence, he told me he was majoring in English Literature, but felt he needed to teach me science. (I sighed a bit, for I knew very few English Lit majors who are equipped to teach me science, but I am very aware of the vast state of my ignorance and I am prepared to learn as much as I can from anyone, however low on the social scale, so I read on.)

It seemed that in one of my innumerable essays, here and elsewhere, I had expressed a certain gladness at living in a century in which we finally got the basis of the Universe straight.

I didn't go into detail in the matter, but what I meant was that we now know the basic rules governing the Universe, together with the gravitational interrelationships of its gross components, as shown in the theory of relativity worked out between 1905 and 1916. We also know the basic rules governing the subatomic particles and their interrelationships, since these are very neatly described by the quantum theory worked out between 1900 and 1930. What's more, we have found that the galaxies and clusters of galaxies are the basic units of the physical Universe, as discovered between 1920 and 1930.

These are all twentieth-century discoveries, you see.

The young specialist in English Lit, having quoted me, went on to lecture me severely on the fact that in *every* century people have thought they understood the Universe at last, and in *every* century they were proven to be wrong. It follows that the one thing we can say about our modern "knowledge" is that it is *wrong*.

The young man then quoted with approval what Socrates had said on learning that the Delphic oracle had proclaimed him the wisest man in Greece. "If I am the wisest man," said Socrates, "it is because I alone know that I know nothing." The implication was that I was very foolish because I knew a great deal.

Alas, none of this was new to me. (There is very little that is new to me; I wish my corresponders would realize this.) This particular thesis was addressed to me a quarter of a century ago by John Campbell, who specialized in irritating me. He also told me that all theories are proven wrong in time.

My answer to him was, "John, when people thought the Earth was flat, they were wrong. When people thought the Earth was spherical, they were wrong. But if *you* think that thinking the Earth is spherical is *just as wrong* as thinking the Earth is flat, then your view is wronger than both of them put together."

The basic trouble, you see, is that people think that "right" and "wrong" are absolute; that everything that isn't perfectly and completely right is totally and equally wrong.

The Relativity of Wrong Isaac Asimov, 1988 Seventeen essays reprinted from the Magazine of fantasy and science fiction 1986 1987 *The Relativity of Wrong* Isaac Asimov, 1989 **NEW THEORY OF PLANETARY MOTION AND NEW FORMULA OF UNIVERSAL GRAVITATION** WANG JIANHUA, 2022-09-12 If the solar system is regarded as a moving mass point system then both the planet m and the sun M move around the solar system mass center O According to the motion law of the mass point system and the centripetal force formula of the curve it can be determined through theoretical analysis and mathematical derivation 1 Kepler's law of planetary motion contradicts the motion rules of mass point systems 2 The universal gravitational force F between planet m and sun M K is the new gravitational constant The force F on the object m in the inertial frame S In the formula V is the velocity of the object m in the inertial frame S and u is the velocity of the inertial frame S in the cosmic space reference frame In addition the author designed three new optical experiments based on the light interference theory to verify whether the principle of constant speed of light conforms to objective facts Experiment 1 Using the new front and rear hole laser interferometer for verification Experiment 2 Verification of using long and short optical path Michelson interferometers Experiment 3 Verification of using a double hole interferometer In Defense of Scientism Byron K. Jennings, 2015 This book is a series of short perceptive and witty essays about science and how it works The author a long time theoretical physicist and science administrator shares his hard won insights about science gained from years of working in the trenches The approach is eclectic with examples and quotes from a wide variety of sources However a unified view of science is presented namely that science is simply the straightforward application of model building and testing against observation The technique is applicable to all walks of life hence the title of the book *Why Math Must Replace Science* Mike Hockney, 2014-11-03 The greatest catastrophe in intellectual history was to regard physics as real and mathematics as an unreal abstraction In fact mathematics is noumenal true reality and physics is phenomenal illusory reality Mathematics tells you what things are in themselves and physics tells you how they appear to us Mathematics is the perfect ground of existence defined by the God Equation It's the source of causation determinism and objective reality all of the things now formally denied by physics which claims that observable reality is indeterministically born of unreal potentiality wavefunctions It's time to replace the scientific method with the mathematical method It's time to recognize that true reality is intelligible not sensible noumenal not phenomenal unobservable not observable metaphysical not physical hidden not manifest rationalist not empiricist necessary not contingent Don't follow the crowd Think for yourself **Ex Auditu - Volume 32** Klyne Snodgrass, 2017-06-05 Introduction Klyne Snodgrass On Bringing Home the Bacon Reflections on Science Faith and Scripture Iain Provan Response to Provan John Walton Paul and the Person Perspectives from Philosophy and the Cognitive Sciences Susan Grove Eastman Response to Eastman A Andrew Das Evolutionary Psychology and Romans 5 7 The Slavery to Sin in Human Nature Paul Allen Response to Allen Christopher Lilley Multiverse

Durham, Dean Rickles, 2016-12-09 In this essay collection leading physicists philosophers and historians attempt to fill the empty theoretical ground in the foundations of information and address the related question of the limits to our knowledge of the world Over recent decades our practical approach to information and its exploitation has radically outpaced our theoretical understanding to such a degree that

reflection on the foundations may seem futile But it is exactly fields such as quantum information which are shifting the boundaries of the physically possible that make a foundational understanding of information increasingly important One of the recurring themes of the book is the claim by Eddington and Wheeler that information involves interaction and putting agents or observers centre stage Thus physical reality in their view is shaped by the questions we choose to put to it and is built up from the information residing at its core This is the root of Wheeler s famous phrase it from bit After reading the stimulating essays collected in this volume readers will be in a good position to decide whether they agree with this view

Transcending the Speed of Light Marc Seifer, 2008-08-13 A study of the new scientific understanding of consciousness and the mind as a fifth dimension of reality Introduces the existence of a fifth dimension one of mind an inner or hyperspace where time is transcended Shows how the barrier of the speed of light is actually a gateway demarking the fifth dimension Since the introduction of Descartes dualism in the seventeenth century the mind and the physical world have been viewed as disconnected entities Yet qualities of mind such as awareness purposeful action organization design and even decision making are present within the structure of matter and within the dimensions of space and time The space time continuum of scientists generally ignores the realm of the mind though phenomena such as imaginary numbers used by Einstein to combine space with time are concepts that only exist in the mind Marc Seifer contends that the inadequacy of four dimensional models to account for our experience of mental phenomena points to the consciousness of the mind as a higher organizing principle a fifth dimension where thoughts are as real and quantifiable as our familiar physical world He shows that because thought enables us to move backward and forward through time reflecting on the past and making plans for the future this fifth dimension of mind breaks the laws of relativity thereby transcending the speed of light His extensive study of this fifth dimension ranges from relativity and ether theory to precognition telepathy and synchronicity all from the perspective of the conscious universe

Chain Bang Theory and Fourth Law Of Motion Dharmaj Mitra, 2024-06-18 The greatest discovery of this century Chain Bang Theory and Fourth Law of Motion After the birth of human kind their utmost question is that How did they originate What is the essence of life within me How the material world come from In which reason all debris of galaxy universe moving rotating revolving and orbiting In the book Chain Bang Theory and Fourth Law of Motion the secret of the creation of the galaxy universe and the Laws of planetary motion that Sir Isaac Newton Einstein and modern science could not yet discover It also provides answers to all questions related to the universe Why big Bang Theory Gravity Theory and General Relativity Theory are wrong Because 1 Since there are multiverse So what is the relevance of Big Bang Theory 2 If all the planets in the solar system revolve around the Sun due to the Sun s gravity how does the Sun rotate it s own axis once in a month 3 Solar system orbit the milky galaxy s center every 225 million years What is the force that driven them together All these questions rejecting Big Bang Theory Gravity Theory and General Relativity Theory Hence we must open to a new door for enlightenment That is Chain Bang Theory and Fourth Law of Motion Seven Reasons To

Refute The Idea That We Are Visited By Aliens Joseph Hamington, In a world where the idea of extraterrestrial visitors captures the imagination of many this book offers a thoughtful and meticulous analysis of the possibility that we are genuinely visited by beings from other worlds Delving into scientific evidence astronomical observations challenges of interstellar travel and the biological aspects of beings the author paints a picture that challenges popular conceptions of alien visitors on Earth From the inherent challenges of traveling across the vast distances of outer space to the intricate details of biological interactions the combination of his research with a critical and unbiased perspective makes *Seven Reasons to Refute the Idea That We Are Visited by Aliens* an essential read for anyone intrigued by the UFO phenomenon and the possibility of alien life on Earth Whether you are a skeptic or an enthusiast on the subject this book will provide valuable insights that will deepen your understanding of one of the greatest mysteries of our time *19th Natural Philosophy Alliance Proceedings* Greg Volk,2012-07-14 The Natural Philosophy Alliance NPA sponsors regular international conferences for presenting high quality papers discussing aspects of philosophy in the sciences Many papers offer challenges to accepted orthodoxy in the sciences especially in physics Everything from the micro physics of quantum mechanics to the macro physics of cosmology is entertained Though the main interest of the NPA is in challenging orthodoxy in the sciences it will also feature papers defending such orthodoxy Our ultimate propose is to enable participants to articulate their own understanding of the truth All papers are reviewed by society officers and sometimes by other members before presentation in conferences and they are edit sometimes very significantly prior to publication in the *Proceedings of the NPA* Solutions of Exercises of The Mechanics of Lorentz Transformations Taha Sochi,2022-09-28 This book contains detailed solutions of all the exercises of my book *The Mechanics of Lorentz Transformations* The solutions are generally very detailed and hence they are supposed to provide some sort of revision for the subject topic *The Christian Science Journal* ,1909 Spooky Action at a Distance George Musser,2015-11-03 Long listed for the 2016 PEN E O Wilson Literary Science Writing Award Delightfully readable *Spooky Action at a Distance* is a mind bending voyage to the frontiers of modern physics that will change the way we think about reality What is space It isn t a question that most of us normally ask Space is the venue of physics it s where things exist where they move and take shape Yet over the past few decades physicists have discovered a phenomenon that operates outside the confines of space and time nonlocality the ability of two particles to act in harmony no matter how far apart they may be It appears to be almost magical Einstein grappled with this oddity and couldn t come to terms with it describing it as spooky action at a distance More recently the mystery has deepened as other forms of nonlocality have been uncovered This strange occurrence which has direct connections to black holes particle collisions and even the workings of gravity holds the potential to undermine our most basic understandings of physical reality If space isn t what we thought it was then what is it In *Spooky Action at a Distance* George Musser sets out to answer that question offering a provocative exploration of nonlocality and a celebration of the scientists who are trying to explain it Musser guides

us on an epic journey into the lives of experimental physicists observing particles acting in tandem astronomers finding galaxies that look statistically identical and cosmologists hoping to unravel the paradoxes surrounding the big bang He traces the often contentious debates over nonlocality through major discoveries and disruptions of the twentieth century and shows how scientists faced with the same undisputed experimental evidence develop wildly different explanations for that evidence Their conclusions challenge our understanding of not only space and time but also the origins of the universe and they suggest a new grand unified theory of physics An important book that provides insight into key new developments in our understanding of the nature of space time and the universe It will repay careful study John Gribbin The Wall Street Journal An endlessly surprising foray into the current mother of physics many knotty mysteries the solving of which may unveil the weirdness of quantum particles black holes and the essential unity of nature Kirkus Reviews starred review

Foundations of Quantum Mechanics Roderich Tumulka, 2022-11-22 This book introduces and critically appraises the main proposals for how to understand quantum mechanics namely the Copenhagen interpretation spontaneous collapse Bohmian mechanics many worlds and others The author makes clear what are the crucial problems such as the measurement problem related to the foundations of quantum mechanics and explains the key arguments like the Einstein Podolsky Rosen argument and Bell's proof of nonlocality He discusses and clarifies numerous topics that have puzzled the founding fathers of quantum mechanics and present day students alike such as the possibility of hidden variables the collapse of the wave function time of arrival measurements explanations of the symmetrization postulate for identical particles or the nature of spin Several chapters are devoted to extending the different approaches to relativistic space time and quantum field theory The book is self contained and is intended for graduate students and researchers who want to step into the fundamental aspects of quantum physics Given its clarity it is accessible also to advanced undergraduates and contains many exercises and examples to master the subject

Our Almost Impossible Universe R. Mirman, 2006 WHY GOD COULD NOT CREATE THE UNIVERSE WITH A DIFFERENT DIMENSION EVEN IF IT WANTED TO or perhaps anything else Perhaps the universe must be the way it is It seems that what is omnipotent is mathematics elementary arithmetic just counting Yet even mathematics is not powerful enough to create a universe there are just too many conditions conflicting Existence is impossible Beyond that for there to be structure is quite inconceivable But the universe does exist there are galaxies stars even the possibility of life That life is possible merely allows it to exist but only with the greatest good fortune does it actually occur Intelligence is vastly less likely ability and technology far more improbable That we are what we are seem so strange inconceivable that we are left merely with wonder and as we seem unable to realize the need for the deepest care responsibility and gratitude We have been given by the unbelievable benevolence of chance no life but life with the most wondrous part of the universe the ability to think to know to create to wonder and thus the demand that we use our most awesome gifts to protect them to protect and preserve the world in which they exist and the life likely so rare if not unique in the universe which has received these astounding

favors of chance that has been given by nature its most exalted constituents What we are requires that we enhance what we are what we are part of to see understand and be grateful An exploration of the precise conditions required for the existence of humans in the universe the author does an admirable job delineating the laws of physics without becoming too bogged down in complicated jargon and he maintains a sense of wonder about the unique and random nature of the universe He repeatedly celebrates our highly improbable achievements as a species marveling at our ability to use the language of abstract mathematics to unravel the mysteries of existence the prevailing tone of the narrative is clear and confident marked by a meticulous attention to detail An often fascinating journey through the history of the universe and mankind Kirkus Discoveries
