Reliability For The Social Sciences Theory And Applications:

Reliability for the Social Sciences Ross E. Traub, 1994-01-24 How can social scientists assess the reliability of the measures derived from tests and questionnaires Through an illustrative review of the principles of classical reliability theory Ross E Traub explores some general strategies for improving measurement procedures Beginning with a presentation of random variables and the expected value of a random variable the book covers such topics as the definition of reliability as a coefficient and possible uses of a coefficient the notion of parallel tests so as to make possible the estimation of a reliability coefficient for a set of measurements what to do when parallel tests are not available what factors affect the reliability coefficient and how to estimate the

Models for Multilevel Data Models for Latent Variables Foundational Issues These sections comprising twenty four chapters address topics in scaling and measurement advances in statistical modeling methodologies and broad philosophical themes and foundational issues that transcend many of the quantitative methodologies covered in the book The Handbook is indispensable to the teaching study and research of quantitative methods and will enable readers to develop a level of understanding of statistical techniques commensurate with the most recent state of the art theoretical developments in the field It provides the foundations for quantitative research with cutting edge insights on the effectiveness of each method depending on the data and distinct research situation

Introduction to Nonparametric Item Response Theory Klaas Sijtsma,Ivo W. Molenaar,2002-03-12 This book introduces social and behavioral science students and researchers to the theory and practice of the highly powerful methods of nonparametric item response theory IRT Anyone who uses or constructs tests or questionnaires for measuring abilities achievements personality traits attitudes or opinions will find nonparametric IRT useful for designing and improving such measurements The authors show how the broadness of the nonparametric item response models allows them to fit many data sets and remain powerful enough for implying useful measurement properties such as the ordering of persons using the simple total score number correct for dichotomous item tests and sum of rating scale score for polytomous item tests and the ordering of the items using the item means

Shavelson, Noreen M. Webb, 1991-07-23 Accessible to any professional or researcher who has a basic understanding of analysis of variance Shavelson and Webb offer an intuitive development of generalizability theory a technique for estimating the relative magnitudes of various components of error variation and for indicating the most efficient strategy for achieving desired measurement precision Covering a variety of topics such as generalizability studies with nested facets and with fixed facets measurement error and generalizability coefficients and decision studies with same and with different designs the text includes exercises so the reader may practice the application of each chapter's material By using detailed illustrations and examples Shavelson and Webb clearly describe the logic underlying major concepts in generalizability theory to enable readers to apply these methods when investigating the consistency of their own measurements Doing Quantitative Research in the Social Sciences Thomas R Black, 1999-03-30 This original textbook provides a comprehensive and integrated approach to using quantitative methods in the social sciences Thomas R Black guides the student and researcher through the minefield of potential problems that may be confronted and it is this emphasis on the practical that distinguishes his book from others which focus exclusively on either research design and measurement or statistical methods Focusing on the design and execution of research key topics such as planning sampling the design of measuring instruments choice of statistical text and interpretation of results are examined within the context of the research process In a lively and accessible style the student is introduced to research design issues alongside statistical procedures and encouraged to develop analytical and decision making skills **Advances in Soft Computing** Obdulia Pichardo-Lagunas, Sabino Miranda-Jiménez, 2017-08-01 The two volume set LNAI 10061 and 10062 constitutes the proceedings of the 15th Mexican International Conference on Artificial Intelligence MICAI 2016 held in Canc n Mexico in October 2016 The total of 86 papers presented in these two volumes was carefully reviewed and selected from 238 submissions The contributions were organized in the following topical sections Part I natural language processing social networks and opinion mining fuzzy logic time series analysis and forecasting planning and scheduling image

Social Capital Theory Julia Häuberer, 2010-10-27 The field of social capital still lacks a recognized general theory Accordingly various and sometimes inappropriate measurements are used for it Julia Häuberer contributes to filling in this gap and provides progress towards the creation of a formalized social capital theory based on the founding concepts of social capital of Bourdieu 1983 and Coleman 1988 and current concepts of Putnam 2000 Burt 1992 and Lin 2001 The second part of the monograph focuses on the quality of measurements of the more general concept of social capital derived in the first part Therefore the telephone survey Social Relationships among Czech Citizens conducted as a test retest experiment is analyzed This book is valuable reading for academics in Sociology and Political Science
