Science and Religion--opposing Viewpoints ,1981 *Science & Religion* Janelle Rohr (Ed),1988 Presents opposing viewpoints about the relationship between religion and science both historically and in the present Science & Religion ,1988 Presents opposing viewpoints about the relationship between religion and science both historically and in the present

Science and Religion David L. Bender,1981 **Twelve Theological Dilemmas** Gregory C. Higgins,1991 A fresh impartial presentation of timeless theological questions that Christians have found puzzling accompanied by equally differing and valid explanations for them **Bibliographic Guide to Education** ,2002 lists publications cataloged by Teachers College Columbia University supplemented by The Research Libraries of The New York Public Library **Books in Series, 1876-1949** R.R. Bowker Company,1982 **Dimensions of Faith** Steve Donaldson,2015-07-28 In *Dimensions of Faith* cognitive scientist Steve Donaldson takes readers on a journey from the world of assumptions set minds widely varying beliefs and popular misconceptions to an understanding of the true essence and role of faith as the natural and inevitable product of brains Using numerous illustrations and examples Donaldson shows how faith is necessitated by a variety of unavoidable limitations exposes the myth of a divide between faith and critical thinking provides practical advice for crafting coherent beliefs and explains why there can never be such a place as Factland Along the way he takes a special look at religious faith evaluating its attributes exploring its relation to other manifestations of faith investigating whether God has done his job well enough to warrant the faith placed in him and pondering how truth seekers can sometimes end up in very different places *Thoughtful Theism: Redeeming Reason in an Irrational Age* Fr. Andrew Younan,2017-05-25 The American Theosophist ,1912 **Science Spirituality and Ontological Mysticism** Lalan Prasad Singh,2016-01-01 This book is the outcome of two decades of author's reflection over this subject Ontological mysticism is the basis for the philosophical and the scientific truth and reality Twenty first century is ushering in an era of spiritual renaissance There is a convergence of science and spirituality The relativity and quantum mechanics are coming closer to Vedantic and Buddhist concept of truth and reality The book analyses and examines different philosophical and scientific concepts both from the transcendental and the relativistic perspective It has also introduced a new concept in the form of cosmic consciousness as the ultimate reality and the scientific and philosophical importance of subject or perceiver Subject or perceiver may be accepted as the fifth dimension The cosmic consciousness is the only reality that exists This book is full of paradoxes and contradictions it is full of allegories and metaphors they are not truths but pointer to deeper and profound truth Sometimes myths and metaphors fables and allegories speak out greater truth than truth itself as truth is mystical and metaphysical

Cholera 1832 R. J. Morris,2022-05-24 Originally published in 1976 this is the account of British society's response to the threat of disease It is the story of an administrative fight to exclude the disease by quarantine and to persuade commerce and working class people to observe carefully thought out regulations The story of one of failure of men hampered by lack of

information lack of resources and lack of a convincing scientific explanation Medical science failed to see that infected water supplies were the major carriers of the epidemic and failed to acknowledge saline infusion the basis of successful modern treatment when it was presented to them by an obscure local surgeon in Leith The social structure of the medical profession was as much a barrier to scientific advance as the technical limitations of statistical method and microscope These reactions are explained in terms of the expectations and the understanding of those involved as well as in terms of modern medical knowledge and sociological theory *A Mind for Tomorrow* Erika Erdmann, David Stover, 2000-03-30 Stover and Erdmann deal with the crises confronting today's world and argue that solutions will come not from new technology nor in retreating to an idealized agrarian past but by overhauling the beliefs that structure society They link the dilemmas facing civilization to a fundamental rift running through society one between religion and the humanities rooted in subjective experience and science which emphasizes objective knowledge They suggest a promising way of closing this rift found in the work of Nobel Laureate and neuroscientist Roger W Sperry They examine Sperry's lifework including his famous split brain research and show how it led him to propose a theory of consciousness that challenged science's dismissal of subjective experience as irrelevant By seeing consciousness as an emergent causal property of brain function Sperry reinstated subjective experience into the scientific worldview laid the foundation for the cognitive revolution that has since swept through psychology and created a means by which science can help create ethical systems better able to deal with today's challenges Stover and Erdmann conclude by looking at ways in which others have built upon Sperry's ideas and they hold out the hope that with the creation of belief systems more compatible with science a way out of humanity's current troubles may indeed be found The result is an excursion through a world of exciting ideas and a book sure to absorb anyone interested in the fate of our species and how that fate might be influenced for the better Students researchers scholars and concerned citizens particularly interested in cognitive psychology science and society and futures studies will find the book intriguing Theosophy Simplified Irving Steiger Cooper, 1915 **Criticizing Science** Myrna Perez, 2024-12-17 How Stephen Jay Gould's career illustrates that criticizing science is important for American democracy The question of public trust in science feels newly urgent but today is not the first time that opposing ends of the American political spectrum have critiqued modern science This dynamic has historical roots in the early 1970s when critiques of science emerged simultaneously out of Civil Rights feminist and decolonization movements on the left as well as within the creationism of the Christian Right In *Criticizing Science* Myrna Perez follows the public career of evolutionary biologist political leftist and anti creationist Stephen Jay Gould during the final decades of the American twentieth century Gould believed that denaturalizing scientific objectivity could be part of the greater work of racial and gender justice in the United States Perez shows the promises and limitations of Gould's view most famously expressed in his 1981 book *The Mismeasure of Man* that the collective self reflection on the history of scientific bias would lead to a better less oppressive science She argues that we must instead contend with the radical

possibilities that are opened by working for a resolutely democratic science By centering Gould Perez clarifies divides among left liberal and right wing movements over evolutionary science during the rise of the Christian Right and the expansion of academic feminism These divides continue to shape contemporary debates over climate change vaccines abortion policy and the nature of gender in present day American politics

Reinhold Niebuhr; His Religious, Social, and Political Thought Charles W.
