The Limits of Scientific Reason John McIntyre, 2021-09-27 Critically and comprehensively examining the works of Habermas and Foucault two giants of 20th century continental philosophy this book illuminates the effects of scientific reason as it migrates from its specialized institutions into society It explores how science permeates shared human consciousness to produce effects that ripple through the entire social body to restructure relations between persons discourses institutions and power in ways which we are barely conscious of The book shows how science through its entwinement with power discourses and practices presents certain social arrangements as natural and certain courses of action as beyond question By arguing for a non reductive liberal scientific naturalism that sees science as one form of rationality amongst others it opens possibilities for thought and action beyond scientific knowledge Examining the shifting relations between science and other social institutions discourses and power the book addresses the narrowing of freedom by the instrumental modes of thinking that accompany scientific and technological change McIntyre simultaneously raises the question of the good life and the question of a philosophical critique both directed towards science and at the same time shaped by and responsive to it By analysing the works of Foucault and Habermas in terms of their social political and historical contexts it reveals the two thinkers as linked by a commitment to the Enlightenment tradition and its emancipatory telos The significant differences between the two are seen to result from Foucault's radicalization of this tradition a radicalization which is at the same time implicit within the Enlightenment project itself

The Meaning of Science Tim Lewens, 2016-01-26 A philosopher of science examines the biggest ethical and moral issues in science today and explains why they matter for all of us scientist and layman alike Science has produced explanations for everything from the mechanisms of insect navigation to the formation of black holes and the workings of black markets But how much can we trust science and can we actually know the world through it How does science work and how does it fail And how can the work of scientists help or hurt everyday people These are not questions that science can answer on its own This is where philosophy of science comes in Studying science without philosophy is to quote Einstein to be like somebody who has seen thousands of trees but has never seen a forest Cambridge philosopher Tim Lewens shows us the forest He walks us through the theories of seminal philosophers of science Karl Popper and Thomas Kuhn and considers what science is how far it can and should reach and how we can determine the nature of its truths and myths These philosophical issues have consequences that stretch far beyond the laboratory For instance What role should scientists have in policy discussions on environmental issues such as fracking What are the biases at play in the search for a biological function of the female orgasm If brain scans

can be used to demonstrate that a decision was made several seconds before a person actually makes a conscious choice what does that tell us about the possibility of free will By examining science through this philosophical lens Lewens reveals what physics can teach us about reality what biology teaches us about human nature and what cognitive science teaches us about human freedom A masterful analysis of the biggest scientific and ethical issues of our age The Meaning of Science forces us to confront the practical personal and political purposes of science and why it matters to all of us **Current**
