Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn **The Cambridge History of Science:**

Impure Science Steven Epstein, 1996-12-09 In the short turbulent history of AIDS research and treatment the boundaries between scientist insiders and lay outsiders have been crisscrossed to a degree never before seen in medical history Steven Epstein's astute and readable investigation focuses on the critical question of how certainty is constructed or deconstructed leading us through the views of medical researchers activists policy makers and others to discover how knowledge about AIDS emerges out of what he calls credibility struggles Epstein shows the extent to which AIDS research has been a social and political phenomenon and how the AIDS movement has transformed biomedical research practices through its capacity to garner credibility by novel strategies Epstein finds that nonscientist AIDS activists have gained enough of a voice in the scientific world to shape NIH sponsored research to a remarkable extent Because of the blurring of roles and responsibilities the production of biomedical knowledge about AIDS does not he says follow the pathways common to science indeed AIDS research can only be understood as a field that is unusually broad public and contested He concludes by analyzing recent moves to democratize biomedicine arguing that although AIDS activists have set the stage for new challenges to scientific authority all social movements that seek to democratize expertise face unusual difficulties Avoiding polemics and accusations Epstein provides a benchmark account of the AIDS epidemic to date one that will be as useful to activists policy makers and general readers as to sociologists physicians and scientists **American Science and Modern**

China, 1876-1936 Peter Buck, 1980-05-30 This essay in comparative history focuses on the transmission of scientific ideas and organizations from the United States to China Pursuing the Unity of Science Harmke Kamminga, Geert

Somsen, 2016-05-20 From 1918 to the late 1940s a host of influential scientists and intellectuals in Europe and North America were engaged in a number of far reaching unity of science projects In this period of deep social and political divisions scientists collaborated to unify sciences across disciplinary boundaries and to set up the international scientific community as a model for global political co operation They strove to align scientific and social objectives through rational

planning and to promote unified science as the driving force of human civilization and progress This volume explores the unity of science movement providing a synthetic view of its pursuits and placing it in its historical context as a scientific and political force Through a coherent set of original case studies looking at the significance of various projects and strategies of unification the book highlights the great variety of manifestations of this endeavour These range from unifying nuclear physics to the evolutionary synthesis and from the democratization of scientific planning to the utopianism of H G Wells s world state At the same time the collection brings out the substantive links between these different pursuits especially in the form of interconnected networks of unification and the alignment of objectives among them Notably it shows that opposition to fascism using the instrument of unified science became the most urgent common goal in the 1930s and 1940s In addressing these issues the book makes visible important historical developments showing how scientists participated in and actively helped to create an interwar ideology of unification and bringing to light the cultural and political significance of this enterprise

Darwin's Metaphor Robert Maxwell Young,1971 Science and Society ,1978 **The Development of Modern Medicine in Non-Western Countries** Hormoz Ebrahimnejad,2009-01-13 This book for the first time bridges the gap in medical history between modern Western and non Western medicines It opens a new perspective in medical historiography in which modern medicine becomes an integral part of the history of medicine in non European countries

Cultural Boundaries of Science Thomas F. Gieryn,2022-03-29 Why is science so credible Usual answers center on scientists objective methods or their powerful instruments In his new book Thomas Gieryn argues that a better explanation for the cultural authority of science lies downstream when scientific claims leave laboratories and enter courtrooms boardrooms and living rooms On such occasions we use maps to decide who to believe cultural maps demarcating science from pseudoscience ideology faith or nonsense Gieryn looks at episodes of boundary work Was phrenology good science How about cold fusion Is social science really scientific Is organic farming After centuries of disputes like these Gieryn finds no stable criteria that absolutely distinguish science from non science Science remains a pliable cultural space flexibly reshaped to claim credibility for some beliefs while denying it to others In a timely epilogue Gieryn finds this same controversy at the heart of the raging science wars

Science in the 20th Century and Beyond Jon Agar,2013-05-20 A compelling history of science from 1900 to the present day this is the first book to survey modern developments in science during a century of unprecedented change conflict and uncertainty The scope is global Science s claim to access universal truths about the natural world made it an irresistible resource for industrial empires ideological programs and environmental campaigners during this period Science has been at the heart of twentieth century history from Einstein s new physics to the Manhattan Project from eugenics to the Human Genome Project or from the wonders of penicillin to the promises of biotechnology For some science would only thrive if autonomous and kept separate from the political world while for others science was the best guide to a planned and better future Science was both a routine if essential part of an orderly society and the disruptive

source of bewildering transformation Jon Agar draws on a wave of recent scholarship that explores science from interdisciplinary perspectives to offer a readable synthesis that will be ideal for anyone curious about the profound place of science in the modern world

Richard Owen Nicolaas Rupke, 2024-05-31 In the mid 1850s no scientist in the British Empire was more visible than Richard Owen Mentioned in the same breath as Isaac Newton and championed as Britain's answer to France's Georges Cuvier and Germany's Alexander von Humboldt Owen was as the Times declared in 1856 the most distinguished man of science in the country But a century and a half later Owen remains largely obscured by the shadow of the most famous Victorian naturalist of all Charles Darwin Publicly marginalized by his contemporaries for his critique of natural selection Owen suffered personal attacks that undermined his credibility long after his name faded from history With this innovative biography Nicolaas A Rupke resuscitates Owen's reputation Arguing that Owen should no longer be judged by the evolution dispute that figured in only a minor part of his work Rupke stresses context emphasizing the importance of places and practices in the production and reception of scientific knowledge Dovetailing with the recent resurgence of interest in Owen's life and work Rupke's book brings the forgotten naturalist back into the canon of the history of science and demonstrates how much biology existed with and without Darwin

Performing Medicine Michael Brown, 2018-02-28 When did medicine become modern This book takes a fresh look at one of the most important questions in the history of medicine It explores how the culture's values and meanings of medicine were transformed across the late eighteenth and early nineteenth centuries as its practitioners came to submerge their local identities as urbane and learned gentlemen into the ideal of a nationwide and scientifically based medical profession Moving beyond traditional accounts of professionalization it demonstrates how visions of what medicine was and might be were shaped by wider social and political forces from the eighteenth century values of civic gentility to the radical and socially progressive ideologies of the age of reform Focusing on the provincial English city of York it draws on a rich and wide ranging archival record including letters diaries newspapers and portraits to reveal how these changes took place at the level of everyday practice experience and representation

Observing God William J. Astore, 2017-07-05 Scottish theologian educator astronomer and popularizer of science Thomas Dick 1774-1857 promoted a Christianized form of science to inhibit secularization to win converts to Christianity and to persuade evangelicals that science was sacred His devotional theology of nature made radical claims for cultural authority This book presents the first detailed analysis of his life and works After an extended biographical introduction Dick's theology of nature is examined within the context of natural theology and also his views on the plurality of worlds the nebular hypothesis and geology Other chapters deal with Dick's use of aesthetics to shape social behaviour for millennial purposes and with the publishing history of his works their availability and their reception In the final part the author explores Dick's influence in America His pacifism won him Northern evangelical supporters while his writings dominated the burgeoning field of popular science powerfully shaping science's cultural meaning and its uses

The

Identity of the History of Science and Medicine Andrew Cunningham,2018-02-06 In these essays Andrew Cunningham is concerned with issues of identity what was the identity of topics disciplines arguments diseases in the past and whether they are identical with more usually how they are not identical with topics disciplines arguments or diseases in the present Historians usually tend to assume such continuous identities of present attitudes and activities with past ones and rarely question them the contention here is that this gives us a false image of the very things in the past that we went to look for
