 Zweifach, 2012-12-06 Biomechanics is concerned with the response of living matter to forces and its study has taken long
 strides in recent years In the past two decades biomechanics has brought improved understanding of normal and patho
 physiology of organisms at molecular cellular and organ levels it has helped developing medical diagnostic and treatment
 procedures it has guided the design and manufacturing of prosthesis and instruments it has suggested the means for
 improving human performance in the workplace sports and space it has made us understand trauma in war and in peace
 Looking toward the future we see many more areas of possible development such as reduction in heart diseases and
 atherosclerosis improved vascular assist and replacement devices including a permanent artificial heart enhanced oxygen
 transport in the lung understanding and control of growth and changes mechanics of neuromuscular control and robotics
 prevention of joint degeneration permanent total joint replacements prevention of low back pain workplace designs to
 enhance productivity ambulation systems for the handicapped fully implantable hearing aids improved understanding of the
 mechanisms for permanent disability injuries identification of factors such as alcohol use and disease influence on impact
 tolerance improved cellular bioreactor designs mechanics of DNA and its application in biotechnology Obviously the
 attainment of these prospects will greatly improve the quality of human life and reduce the costs of living This list is from a
