Scientific Visualization '95 Riccardo Scateni, 1995 Virtual Environments in Clinical Psychology and Neuroscience Giuseppe Riva, Brenda K. Wiederhold, E. Molinari, 2006-12-15 Virtual Reality VR offers the potential to develop human testing and training environments that allow for the precise control of complex stimulus presentations in which human cognitive and functional performance can be accurately assessed and rehabilitated. However, basic feasibility and human issues need to be addressed in order for this technology to be reasonably and efficiently applied in clinical psychology. The book, written in a scholarly style, will provide rationales for virtual reality's applicability in clinical psychology. We will review the relevant literature regarding theoretical and pragmatic issues for these applications and provide a description of ongoing work developed world wide. The topics directly involve critical issues for clinicians, designers, and users and will be discussed with scientific competence without neglecting clarity and empirical cases with suggestions for actual use. The book is divided in three main sections: VR in clinical psychology opportunities and challenges; VR in treatment of phobias; and VR in clinical assessment and therapy.

Scientific and Technical Aerospace Reports, 1995 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.

Hierarchical and Geometrical Methods in Scientific Visualization Gerald Farin, Bernd Hamann, Hans Hagen, 2012-12-06 The nature of the physical Universe has been increasingly better understood in recent years and cosmological concepts have undergone a rapid evolution see e.g. [1, 2] or [5]. Although there are alternate theories it is generally believed that the large scale relationships and homogeneities that we see can only be explained by having the universe expand suddenly in a very early inflationary period. Subsequent evolution of the Universe is described by the Hubble expansion: the observation that the galaxies are moving away from each other. We can attribute different rates of this expansion to domination of different cosmological processes beginning with radiation evolving to matter domination and relatively recently to vacuum domination (the Cosmological Constant term [4]). We assume throughout that we will be relying as much as possible on observational data with simulations used only for limited purposes e.g. the appearance of the Milky Way from nearby intergalactic viewpoints. The visualization of large scale astronomical data sets using xed non interactive animations has a long history. Several books and films exist ranging from Cosmic View: The Universe in Forty Jumps [3] by Kees Boeke to Powers of 10 [6, 13] by Charles and Ray Eames and the recent IMAX film Cosmic Voyage [15]. We have added our own contribution [9] Cosmic Clock which is an animation based entirely on the concepts and implementation described in this paper.

Scientific Visualization Charles D. Hansen, Min Chen, Christopher R. Johnson, Arie E. Kaufman, Hans Hagen, 2014-09-18 Based on the seminar that took place in Dagstuhl, Germany in June 2011, this contributed volume studies the four important topics within the scientific visualization field: uncertainty visualization, multifield visualization, biomedical visualization, and scalable visualization. Uncertainty visualization deals with uncertain data from simulations or sampled data.

uncertainty due to the mathematical processes operating on the data and uncertainty in the visual representation Multifield visualization addresses the need to depict multiple data at individual locations and the combination of multiple datasets Biomedical is a vast field with select subtopics addressed from scanning methodologies to structural applications to biological applications Scalability in scientific visualization is critical as data grows and computational devices range from hand held mobile devices to exascale computational platforms Scientific Visualization will be useful to practitioners of scientific visualization students interested in both overview and advanced topics and those interested in knowing more about the visualization process **Index of Conference Proceedings** British Library. to create perceptually motivated designs by utilizing how the auditory and visual systems complement each other and how they are integrated in cognition for sense making The thesis contains six studies that explored the integration of sonification and visualization ranging from literature surveys to design oriented studies A state of the art report provided a survey on the integration of sonification and visualization to offer an introduction to the field to new and current practitioners In another study a conceptual framework for scene analysis was developed to support the design and analysis of audiovisual data representations The rest of the studies were design oriented where each focused on a specific aspect of how sonification can complement visualization depending on the domain and tasks of the study Other than providing concrete examples of audiovisual integrations the main contributions of the design oriented studies are provided in their evaluation results in the form of design recommendations These include the use of redundant mappings for multi dimensional data analysis and considering subjective differences of domain experts for situational awareness support in air traffic control The design oriented studies also compared sonification designs where one study showed a potential trade off of using informative or pleasant designs for astronomy science communication Another comparison showed that concrete sonification designs can complement abstract visualizations Lastly the thesis provides design considerations by comparing the level of redundancy indexicality and complexity of each sonification design through the developed conceptual framework Overall this thesis offers motivated recommendations for the integration of sonification and visualization
