

Corporate-University Linkages and the Scientific-Technical Revolution

Howard Huchbinder and Janice Newson
York University

The economic situation for Canadian universities during the past 25 years has been like a ride on a roller coaster. The period of economic growth and expansion during the 1960s supported a rapid rise in the number of universities and provided more than adequate funding. The downside of the ride began with the economic crisis dating from about 1975, although universities were beginning to feel the effects even earlier. During the last decade, under-funding and curtailment have been the pattern. In some provinces, notably British Columbia, they arrived in one fell swoop after an extended period of financial well-being. In other provinces, Ontario, for example, the process of retrenchment was gradual but relentless.

During this same period, the forms of production in the economic sphere of Canadian society have significantly altered. The industrial-mechanical model of the late 19th and early 20th century is being replaced by a computer-based high-tech system. Innovations such as robotics have significantly altered the nature of the workplace. The emphasis on information processing as a key ingredient demands a different sort of training and preparation from that required to operate a machine. Both universities and corporations have expressed more and more interest in developing new linkages with one another. For universities, these linkages anticipate a new source of funds at a time when public sources have become increasingly scarce; for corporations, they mean the acquisition of an infrastructure to meet research and manpower training needs at a time when Canadian manufacturers appear to be facing intensive competition from foreign producers.

The intersection of university under-funding and corporate interest in new sorts of linkages confronts universities with a dilemma. Is university-corporate integration a good thing? Can the role of a university be defined in terms of its usefulness for the needs of the economy? What would be the impact of such a definition on the mission of the university? At the same time, the demands of the scientific-technical revolution introduce concerns about the effects on university programs. Is there a clear and correct understanding about how universities should function in regard to new forces of production through a corporate intermediary? This paper addresses these questions and concerns.

In the pages that follow, we summarize the pattern of expansion and retrenchment and the growing effects of the scientific-technical revolution on
