

## Principles of Science

# Scientific Explanations and Interpretations

## Facts, Observations, and Opinions

- **Science** is an inherently objective topic, as it requires facts to explain the world.
- **Facts** are information that are true.
- Facts come from data and results collected from observations and experiments.
- **Data** is factual information that isn't affected by opinions or bias.
- When conducting experiments, scientists can use **observations** and **analysis** to collect facts and predict what happens in the world.

### Study Tip

Think about something you've read in a magazine, whether it is an article or a horoscope. Can you identify which are facts, and which are not?

## Concept Check

- What is the difference between facts and data?
- Keep a lookout for opinions that sound like facts: investigate where the information comes from and whether it is true or not.

**Revival: The Psychology of the Future (1918)** Émile Boirac, 2018-01-16 Material contained in this book constitute an entirely new departure in the field of psychological study and experimentation **Resources in Education**, 1995 **Scientific American**, 1904 **Contemporary Futurist Thought** Thomas Lombardo, 2006-06-23 Contemporary Futurist Thought describes recent thinking about the future dealing with both the hopes and the fears expressed in modern times concerning what potentially lies ahead There are many such hopes and fears perhaps an overpowering number competing with each other and swirling about in the collective mind of humanity

Psychologist and futurist Tom Lombardo describes this mental universe of inspiring dreams and threatening premonitions regarding the future. The book begins with an in depth examination of the highly influential literary genre of science fiction which Dr Lombardo identifies as the mythology of the future. He next describes the modern academic discipline of future studies which attempts to apply scientific methods and principles to an understanding of the future. Social and technological trends in the twentieth century are then reviewed setting the stage for an analysis of the great contemporary transformation occurring in our present world. Given the powerful and pervasive changes taking place across the globe and throughout all aspects of human life the questions arise: Where are we potentially heading and perhaps more importantly where should we be heading? The final chapter provides an extensive review of different answers to these questions. Describing theories and approaches that highlight science, technology, culture, human psychology and religion among other areas of focus as well as integrative views which attempt to provide big pictures of all aspects of human life, the book provides a rich and broad overview of contemporary ideas and visions about the future. In the conclusion Dr Lombardo assesses and synthesizes these myriad perspectives proposing a set of key ideas central to understanding the future. This book completes the study of future consciousness begun in its companion volume, *The Evolution of Future Consciousness*. These two volumes, rich in historical detail and concise observations on the interrelatedness of a wide range of interdisciplinary topics, are a significant contribution to the field of future studies and a valuable resource for educators, consultants and anyone wishing to explore the significance of thinking about the future.
