for Surgeons in Training, 3Ed Dugald Gardner, David E. F Tweedle, 2002-03-30 Previous editions of this book have proved indispensable for trainee surgeons preparing for the MRCS and AFRCS examinations This extensively revised new edition is presented in a compelling new style and in a larger format Beginning with a route map showing how to use this book the text offers concise accounts of the core topics in pathology required of surgeons in training There is particular emphasis on tissue pathology but full account is taken of relevant aspects of microbiology haematology immunology and clinical chemistry Tables of normal laboratory values are included Each major disorder is examined from the point of view of Cause Structure and Behaviour Genetics molecular biology and imaging receive balanced attention as do transfusion telepathology and audit The use of computers is outlined and suggestions given on access to Internet sources for learning purposes The needs of trainees in countries outside Europe have been considered carefully Illustrations have been selected to provide a clear pictorial account of complex points The inclusion of biographies of surgical pioneers adds interest and enables candidates to put their knowledge into context A special feature is a series of marginal signposts in the form Now Read that take candidates to interrelated topics quickly and easily There is extensive cross referencing and a comprehensive index

Biochemistry of the Eye Elaine R. Berman, 1991-04-30 My first introduction to the eye came more than three decades ago when my close friend and mentor the late Professor Isaac C Michaelson convinced me that studying the biochemistry of ocular tissues would be a rewarding pursuit I hastened to explain that I knew nothing about the subject since relatively few basic biochemical studies on ocular tissues had appeared in the world literature Professor Michaelson assured me however that two books on eye biochemistry had already been written One of them a beautiful monograph by Arlington Krause 1934 of Johns Hopkins Hospital is well worth reading even today for its historical perspective The other published 22 years later was written by Antoinette Pirie and Ruth van Heyningen 1956 whose pioneering achievements in eye biochemistry at the Nuffield Laboratory of Ophthalmology in Oxford England are known throughout the eye research community and beyond To their credit are classical investigations on retinal corneal and lens biochemistry beginning in the 1940s and continuing for many decades thereafter Their important book written in 1956 on the Biochemistry of the Eye is a volume that stood out as a landmark in this field for many years In recent years however a spectacular amount of new information has been generated in ocular biochemistry Moreover there is increasing specialization among investigators in either a specific field of biochemistry or a particular ocular tissue
