

Scientific Literacy and the Myth of the Scientific Method

Henry H. Bauer

Ignorance and misconception can have regrettable consequences. Nowadays, science and technology are so inextricably a part of our lives that ignorance and misconception about them may have particularly regrettable consequences.

Ignorance of science is indeed widely and quite routinely deplored. That scientific illiteracy is prevalent has become a shibboleth. Schemes proliferate for more and better education in science—just as they did after the first Russian satellite orbited the Earth in 1957.

What has not been widely remarked, however, is the high order of prevailing misconception, as opposed to rank ignorance, about science and technology: misconception even or particularly among the very people who most loudly bemoan the prevalence of scientific illiteracy. Public pundits, not only the public, drastically misconceive

what science is, what it means to be scientific, and what the relationship is between science and technology. Scientists themselves, moreover, and science writers hold many of the same misconceptions.

Perhaps the central fallacy is that there exists an entity called "science" about which sweeping generalizations can validly be made; for example, that science is characterized and defined by the scientific method (which, it is widely supposed, can be defined rigorously and unambiguously). In actuality, for most generalizations about science their opposite also carries some truth. Thus it is in a sense true and yet also a misconception that science prizes originality: the most original scientists usually have a devil of a time

getting anyone to take their notions seriously when they first put them forward. It is in a sense true and yet also a serious

Scientific Literacy And The Myth Of The Scientific Method:

Scientific Literacy and the Myth of the Scientific Method Henry H. Bauer, 1992 What is science Is social science a science Why are more and more so called scientific discoveries being exposed as outright frauds Henry Bauer tackles these and many more intriguing questions that are emerging from within the academic and scientific communities and attracting attention from the popular media and the general public Whether one is a specialist or generalist scientist or humanist thinker or activist it is important to understand the place of science and technology in modern life Popular views about the nature of science and scientific activity contain serious misconceptions that were discarded decades ago by most historians and philosophers of science The perpetuation of these misconceptions usually surface in the form of frustrating and unproductive discussions about everything from setting policy and defining technical matters to whether one individual's point of view is right because it is supported by scientific facts According to Bauer the most serious and widespread misconceptions are that science can be discussed as though all sciences share a great deal in common and as though the scientific method characterizes all sciences Science argues Bauer can be understood only if one recognizes it as a quest by fallible human beings who have evolved ways of interacting that help them gain relatively objective knowledge In other words science is a social activity not simply the result of impersonal methods Concern has recently arisen over the quality of American education and our declining scientific and research orientation Debates are emerging about what direction public universities should be taking as we head into the twenty first century Why and to what extent should society support basic scientific research What should everyone in a democratic society know about science This book will help readers come to an informed understanding about the place of science and technology in today's world

Women Succeeding in the Sciences Jody Bart, 2000 Ample evidence has been provided that women historically have suffered numerous social political and institutional barriers to their entrance and success in the sciences The articles in this anthology refocus the discussion and reflect the interdisciplinary nature of the issues surrounding women in the sciences While the barriers that women have faced as researchers subjects of research students of science and theorists have been well documented this anthology breaks new ground It presents the ways women succeed in the sciences overcome these historical barriers and contribute to the social practice of science and the philosophy of science in both theory and practice

Together Bev France,Vicki Compton,2012-07-30 Over recent years connective partnerships between educational communities and sectors outside of education have become increasingly popular One significant reason behind this popularity has the expansion of information and communication technologies which have increased access and provided mechanisms for ongoing connections to be made between differing worlds But successful connections that cross cultural boundaries are not easy to establish and even harder to maintain in ways that are mutually beneficial This book focuses on science and technology connective ventures and the complexity inherent in bringing such worlds together The authors have been in the business of developing such connections and this book brings them together to describe how and why making connections can support the science technology education sector the technology science communities and the wider sociocultural life we all inhabit A range of illustrative examples of connections in action provide an empirical basis from which to explore and gain insight into the issues for and potential of such connective ventures alongside a rich mix of critical commentary arguments cautions and challenges Five key principles have been distilled from the collective experience and wisdom of the authors serving to capture that which underpins effective and efficient connective initiatives Each principle is accompanied by a set of questions that reflect the issues raised and successes illustrated throughout the book It is hoped these principles and questions will serve to guide people interested in developing funding and or participating in future connective initiatives in the fields of science and technology **Critical Analysis of Science Textbooks** Myint Swe

The Psychology of Science Text Comprehension José Otero, José A. León, Arthur C. Graesser, 2014-04-04 This volume's goal is to provide readers with up to date information on the research and theory of scientific text comprehension It is widely acknowledged that the comprehension of science and technological artifacts is very difficult for both children and adults The material is conceptually complex there is very little background knowledge for most individuals and the materials are often poorly written Therefore it is no surprise that students are turned off from learning science and technology Given these challenges it is important to design scientific text in a fashion that fits the cognitive constraints of the learner The enterprise of textbook design needs to be effectively integrated with research in discourse processing educational technology and cognitive science This book takes a major step in promoting such an integration This volume provides an important integration of research and theory with theoretical methodological and educational applications includes a number of chapters that cover how science text information affects mental representations and strategies introduces important suggestions about how text design and new technologies can be thought of as pedagogical features and establishes academic text taxonomies and a consensus of the criteria to organize inferences and other mental mechanisms

Science: A Many-splendored Thing Igor Novak, 2011-03-25 This book provides the first integrated account of all factors which play a role in making Science what it is today The book discusses historical sociological and philosophical aspects of Science emphasizing their interconnectedness It describes many of the latest developments in scientific practice as well old unsolved problems The book aims to be explanatory and stimulating rather than comprehensive The book is an overview of important issues and aims to present

Does the general public need to understand science And if so is it scientists responsibility to communicate Critics have argued that despite the huge strides made in technology we live in a scientifically illiterate society one that thinks about the world and makes important decisions without taking scientific knowledge into account But is the solution to this illiteracy to deluge the layman with scientific information Or does science news need to be focused around specific issues and organized into stories that are meaningful and relevant to people s lives In this unprecedented comprehensive look at a new field Jane Gregory and Steve Miller point the way to a more effective public understanding of science in the years ahead **Critical Praxis Research** Tricia M. Kress,2011-08-17 Critical Praxis Research CPR is a teacher research methodology designed to bridge the divide between practitioner and scholar drawing together many strands to explain the research process not just as something teacher researchers do but as a fundamental part of who teacher researchers are Emphasizing the researcher over the method CPR embraces and amplifies the skills and passions teachers naturally bring to their research endeavours Emerging from the tradition of critical pedagogy Critical Praxis Research Breathing New Life into Research Methods for Teachers transcends longstanding debates over quantitative vs qualitative and scholar vs practitioner research The text examines the histories and current applications of common methodologies and re conceptualizes the ways that these methodologies can be used to enhance teachers identities as practitioners and researchers It also provides a critical examination of the role of Institutional Review Boards and explores the complexity and ethics of data collection data analysis and writing Through guiding questions and writing prompts the author encourages readers to think through the process of design and conducting CPR The text is theoretically rich but written in an accessible style infused with metaphor irony and humour Critical Praxis Research Breathing New Life into Research Methods for Teachers is both instructive and uplifting sending the message that research is difficult but also joyful like life itself **The Right to Science** Helle Porsdam,Sebastian Porsdam Mann,2021-12-02 The first serious extended effort to use a human rights based approach to address the scientific issues affecting society and the often neglected human right to science **Role of immersive media in public understanding of socio scientific issues (SSIs)** Fahad Asmi,Rongting Zhou,Darren Mundy,Xuesong Zhai,Muhammad Azfar Anwar,2023-03-24 *Research ,*
