Tuomela, 2012-12-06 Were one to characterize the aims of this book ambitiously it could be said to sketch the philosophical foundations or underpinnings of the scientific world view or better of the scientific conception of the world In any case it develops a comprehensive philosophical view one which takes science seriously as the best method for getting to know the ontological aspects of the world This view is a kind of scientific realism causal internal realism as it is dubbed in the book This brand of realism is tough in matters of ontology but soft in matters of semantics and epistemology An ancestor of the book was published in Finnish under the title Tiede toiminta ja todellisuus Gaudeamus 1983 That book is a shortish undergraduate level monograph However as some research level chapters have been added the present book is perhaps best regarded as suited for more advanced readers I completed the book while my stay at the University of Wisconsin in Madison as a Visiting Professor under the Exchange Program between the Universities of Wisconsin and Helsinki I gratefully acknowledge this support I also wish to thank Juhani Saalo and Martti Kuokkanen for comments on the manuscript and for editorial help Dr Matti Sintonen translated the Finnish ancestor of this book into English to be used as a partial basis for this work His translation was supported by a grant from Suomalaisen kirjallisuuden edistämisyseura Finally and as usual I wish to thank Mrs Science Action Labs Astronomy (eBook) Nadine Rogers, 2002-03-01 Astronomy helps students discover the universe question whether or not there may be life on other planets in the solar system see how gravity works and understand the importance of the sun to the whole system They'll enjoy experimenting with rotation speed and gravity discovering some moon superstitions learning about astronomy heroes creating their own Martian making their own rainbow

Conscious Action Theory provides a logical unification between the spirit and the material by identifying reality as an event that processes personal experiences into explanatory memories from which personal experiences are regenerated in a never ending cycle of activity Baer explores the idea that our personal feelings are undeniable facts that have been systematically excluded from the basic sciences thereby leaving us with a schizophrenic division between objective materialism and spiritual idealism Cognitive Action Theory CAT achieves this unification by recognizing that the observer's existence is the foundational premise underlying all scientific inquiry It develops as an event oriented physical theory in which the first person observer is central By analyzing the methods through which we human observers gain knowledge and create the belief systems within which our experiences are explained we discover a fundamental truth all systems are observers and exhibit some form of internal awareness Events not the objects appearing in them are the fundamental building blocks of reality The book is comprised of three parts the first addresses the paradigm shift from an object to an event oriented world view the second develops the foundations of action physics for an event oriented world view and the third provides examples of how these new ideas can be applied to move our knowledge up the next evolutionary step of human development This book will benefit anyone questioning their role in the universe especially those in interdisciplinary fields of philosophy psychology neuroscience and medicine who seek understanding of quantum theory as the physics of conscious systems that know the world Science Action Labs Environment (eBook) Edward Shevick,1998-03-01 Explorations in Environmental Science These easy to use hands on explorations are just what you need to get your science curriculum and your students into action

Learning Science Through Drama Debra McGregor,Dayle Anderson,2023-01-01 This book presents a wide range of international perspectives that explore the different ways the diverse forms of drama supports learning in science It illustrates how learning science by adopting and adapting theatrical techniques can offer more inclusive ways for students to relate to scientific ideas and concepts The theatrical processes by which subject matter can be introduced thought about

discussed transformed enacted and disseminated are shown to be endless The first section of the book considers different ways of theorising and applying drama in classrooms The second section provides a range of case studies illustrating how role play performance embodiment and enquiry approaches can be utilised for learning in primary secondary and tertiary education contexts The third section demonstrates how different research methods from questionnaires particular kinds of tests and even the theatrical conventions themselves can provide rich data that informs how drama impacts on learning science
