The Scientific Life Steven Shapin, 2009-08-01 Who are scientists What kind of people are they What capacities and virtues are thought to stand behind their considerable authority They are experts indeed highly respected experts authorized to describe and interpret the natural world and widely trusted to help transform knowledge into power and profit But are they morally different from other people The *Scientific Life* is historian Steven Shapin's story about who scientists are who we think they are and why our sensibilities about such things matter Conventional wisdom has long held that scientists are neither better nor worse than anyone else that personal virtue does not necessarily accompany technical expertise and that scientific practice is profoundly impersonal Shapin however here shows how the uncertainties attending scientific research make the virtues of individual researchers intrinsic to scientific work From the early twentieth century origins of corporate research laboratories to the high flying scientific entrepreneurship of the present Shapin argues that the radical uncertainties of much contemporary science have made personal virtues more central to its practice than ever before and he also reveals how radically novel aspects of late modern science have unexpectedly deep historical roots His elegantly conceived history of the scientific career and character ultimately encourages us to reconsider the very nature of the technical and moral worlds in which we now live Building on the insights of Shapin's last three influential books featuring an utterly fascinating cast of characters and brimming with bold and original claims *The Scientific Life* is essential reading for anyone wanting to reflect on late modern American culture and how it has been shaped

Shadow Zuoyue Wang,2009 In Sputnik's Shadow traces the rise and fall of the President's Science Advisory Committee from its ascendance under Eisenhower to its demise during the Nixon years Zuoyue Wang examines key turning points during the twentieth century including the beginning of the Cold War the debates over nuclear weapons the Sputnik crisis in 1957 the struggle over the Vietnam War and the eventual end of the Cold War showing how the involvement of scientists in executive policymaking evolved over time and brings new insights to the intellectual social and cultural histories of the era **The**

Impossible Takes Longer David Pratt,2009-05-26 Witty incisive observations on such universally meaningful topics as courage and compassion by many of the greatest minds of the twentieth and twenty first centuries Since 1901 the Nobel Prize has been the hallmark of genius but Nobel laureates tend to be more than merely brilliant their idealism courage and concern for humanity have also made them sources of inspiration and wisdom Contrary to the notion that geniuses are absentminded eccentrics who lead solitary lives many Nobel laureates have been social activists and political leaders and some have been polymaths whose interests and talents were diverse such as Philip Noel Baker winner of the 1959 Peace prize who ran in three Olympic Games Most of the quotations have never been anthologized previously There is a section of short biographical sketches of each of the roughly 250 laureates quoted in the book a brief history of the Nobel Prize and a complete list of every Nobel laureate through 2006 The Impossible Takes Longer is a remarkable assemblage of insightful thought provoking sometimes humorous statements by some of the world's wisest men and women **See Government**

Grow Gareth Davies,2007 An award winning historian's pathbreaking book uses federal education policy from the Great Society to Reagan's New Morning to demonstrate how innovative policies become entrenched irrespective of who occupies the White House **Once and Future Partners** William C. Potter,Sarah Bidgood,2018-10-09 Despite their Cold War rivalry the United States and the Soviet Union frequently engaged in joint efforts to prevent the spread of nuclear weapons Leaders in Washington and Moscow recognized that nuclear proliferation would serve neither country's interests even when they did not see eye to eye in many other areas They likewise understood why collaboration in mitigating this nuclear danger would serve both their own interests and those of the international community This volume examines seven little known examples of US Soviet cooperation for non proliferation including preventing South Africa from conducting a nuclear test developing international safeguards and export control guidelines and negotiating a draft convention banning radiological weapons It uses declassified and recently digitized archival material to explore in depth the motivations for and modalities for cooperation under often adverse political circumstances Given the current disintegration of Russian and US relations including in the nuclear sphere this history is especially worthy of review Accordingly the volume's final chapter is devoted to discussing how non proliferation lessons from the past can be applied today in areas most in need of US Russian cooperation

The Hydrogen Revolution Marco Alverà,2021-11-16 Named a Financial Times Best Book of 2021 An energy expert shows why hydrogen can fight climate change and become the fuel of the future We're constantly told that our planet is in

crisis that to save it we must stop traveling stop eating meat even stop having children But in The Hydrogen Revolution Marco Alver argues that we don't need to upend our lives We just need a new kind of fuel hydrogen From transportation and infrastructure to heating and electricity hydrogen could eliminate fossil fuels boost economic growth and encourage global action on climate change It could also solve the most bedeviling aspects of today's renewable energy from transporting and storing wind and solar energy and their vulnerability to weather changes to the inefficiency and limited utility of heavy short lasting batteries The Hydrogen Revolution isn't just a manifesto for a powerful new technology It's a hopeful reminder that despite the gloomy headlines about the fate of our planet there's still an opportunity to turn things around

Mastering Uncertainty Matt Watkinson, Csaba Konkoly, 2023-03-28 What separates the world's most successful founders entrepreneurs and business leaders from the rest It's not visionary ideas or superhuman intelligence It's something more fundamental their relationship with uncertainty Most people are blown off course by unexpected events Top performers by contrast know how to navigate our unpredictable world Not just that they know how to thrive in it You can acquire this essential skill too In Mastering Uncertainty investor and serial entrepreneur Csaba Konkoly and award winning business author Matt Watkinson reveal the shortcomings of conventional business thinking and the advantages of developing a probabilistic mindset that turns uncertainty from a source of fear into an incredible and exciting advantage They offer superbly practical advice on everything from how to handle setbacks and expand your network to how to spot business opportunities and shape them into successful growing businesses Above all they show how to think and operate like a great entrepreneur

Asian Journal of Social Science ,2003 *Nuclear News* ,1996 *Environments in a Changing World* John Huckle, Adrian Martin, 2014-09-19 While there is no shortage of books on the environment there are few introductory texts that outline the social theory that informs human geographical

approaches to the interactions between ecology and society Students arriving at university often lack the understanding of history economics politics sociology and philosophy that contemporary human geography requires Environments in a Changing World addresses this deficit providing foundation knowledge in a form that is accessible to first year students and applied to the understanding of both contemporary environmental issues and the challenge of sustainability Students are challenged to develop and defend their own ethical and political positions on sustainability and respond to the need for new forms of ecological citizenship
