Tadao Miyakawa,1999 *Victorian Science in Context* Bernard Lightman,2008-07-31 Victorians were fascinated by the flood of strange new worlds that science was opening to them Exotic plants and animals poured into London from all corners of the Empire while revolutionary theories such as the radical idea that humans might be descended from apes drew crowds to heated debates Men and women of all social classes avidly collected scientific specimens for display in their homes and devoured literature about science and its practitioners Victorian Science in Context captures the essence of this fascination charting the many ways in which science influenced and was influenced by the larger Victorian culture Contributions from leading scholars in history literature and the history of science explore questions such as What did science mean to the Victorians For whom was Victorian science written What ideological messages did it convey The contributors show how practical concerns interacted with contextual issues to mold Victorian science which in turn shaped much of the relationship between modern science and culture

Clary,2018 Information on museum activities around the world *Domesticity in the Making of Modern Science* Donald L. Opitz,Staffan Bergwik,Brigitte Van Tiggelen,2016-01-26 The history of the modern sciences has long overlooked the significance of domesticity as a physical social and symbolic force in the shaping of knowledge production This book provides a welcome reorientation to our understanding of the making of the modern sciences globally by emphasizing the centrality of domesticity in diverse scientific enterprises

**Scientific American** ,1879 **The First Scientific American** Joyce Chaplin,2007-08-02 Famous fascinating Benjamin Franklin he would be neither without his accomplishments in science Joyce Chaplin s authoritative biography considers all of Franklin s work in the sciences showing how during the rise and fall of the first British empire science became central to public culture and therefore to Franklin s success Having demonstrated in his earliest experiments and observations that he could master nature Franklin showed the

world that he was uniquely suited to solve problems in every realm In the famous adage Franklin snatched lightning from the sky and the scepter from the tyrants in that order The famous kite and other experiments with electricity were only part of Franklin s accomplishments He charted the Gulf Stream made important observations on meteorology and used the burgeoning science of political arithmetic to make unprecedented statements about America s power Even as he stepped onto the world stage as an illustrious statesman and diplomat in the years leading up to the American Revolution his fascination with nature was unrelenting Franklin was the first American whose genius for science qualified him as a genius in political affairs It is only through understanding Franklin s full engagement with the sciences that we can understand this great Founding Father and the world he shaped [Collections of United States Joint Publications Research Service Translations in the Social Sciences Emanating from Communist China](#) United States. *Science on the Ropes* Carlos Elías,2019-05-15 In this controversial essay Carlos El as addresses the worldwide phenomenon that is threatening the scientific and economic progress of Western countries The rise and influence of magic and irrationality in the media in social networks and at universities is a disturbing phenomenon many Western students no longer want to pursue STEM Science Technologies Engineering and Math careers This lucid and well written book addresses one of the key issues of public debate the deteriorating state of science in Western countries and their governments and its rise in Asian countries The author compares two distinct models the Spanish or Latin model which closed the door on science with the Counter Reformation and that employed by a second group of countries where science was encouraged El as suggests that a similar development could now be taking place between Western countries where the press television and social science academics are becoming increasingly critical towards science and Asia where most prime ministers and other politicians are scientists or engineers This book is intended for STEM educators both at secondary schools and universities scientists and academics interested in scientific culture in the era of fake news

*Man in Revolt* Emil Brunner,2002 In the struggle of ideas the most fundamental and far reaching is that of the nature of mankind What are we Why are we not at peace with ourselves or our neighbours How does our understanding of our nature lead to personal and social well being We have followed the false leads of Darwin Nietzsche Marx and Freud in trying to understand ourselves Despite other differences they all interpret man in relation to nature rejecting transcendent metaphysical or religious understanding of the human condition They do not solve the contradiction between what we are and what we ought to be Brunner sees the human contradiction as comprehensible only in terms of a God to whose word we must respond This is not communication by language it refers to the fundamental character of personal relations People are persons in so far as they can freely say to each other what they think and feel This communication is possible in so far as we recognise that God speaks to us and respond to Him Brunner sees responsibility as the key to personality The Biblical doctrine of man created in the image of God and capable of responding to God s Word is the key to recovering an effective sense of responsibility With

profound penetration and power Brunner applies his thesis to such vexed questions as individuality and community character relations between man and woman relations between soul and body Man in Revolt explains our frustration and confusion about ourselves and why the Christian view of man of his place in nature and history is the truth which man both needs and seeks in the search for himself **Darwin the Writer** George Levine,2011-06-30 Charles Darwin's On the Origin of Species arguably the most important book written in English in the nineteenth century transformed the way we looked at the world It is usually assumed that this is because the idea of evolution was so staggeringly powerful Prize winning author George Levine suggests that much of its influence was due in fact to its artistry to the way it was written Alive with metaphor vivid descriptions twists hesitations personal exclamations and humour the prose is imbued with the sorts of tensions ambivalences and feelings characteristic of great literature Although it is certainly a work of science the Origin is equally a work of literature at home in the company of celebrated Victorian novels such as Middlemarch and Bleak House books that give us a unique yet recognisable sense of what the world is really like while not being literally true Darwin's enormous cultural success Levine contends depended as much on the construction of his argument and the nature of his language as it did on the power of his ideas and his evidence By challenging the dominant reading of his work this impassioned and energetic book gives us a Darwin who is comic rather than tragic ebullient rather than austere and who takes delight in the wild and fluid entanglement of things *The Saturday Review of Politics, Literature, Science and Art* ,1879 World
