The Multimedia Internet Stephen Weinstein, 2007-02-15 This text is a light technical introduction to the three technical foundations for multimedia applications across the Internet: communications principles, technologies, and networking. Compressive encoding of digital media and Internet protocol and services. All the contributing systems elements are explained through descriptive text and numerous illustrative figures. The result is a book pitched toward non-specialists, preferably with technical background who want descriptive tutorial introductions to the three foundation areas. The text discusses advances in digital audio video coding, optical and wireless communications technologies, high speed access networks, and IP based media streaming, all crucial enablers of the multimedia Internet.

Channel Coding Techniques for Wireless Communications K. Deurgha Rao, 2019-11-22 This book discusses the latest channel coding techniques: MIMO systems and 5G channel coding evolution. It provides a comprehensive overview of channel coding covering modern techniques such as turbo codes, low density parity check (LDPC) codes, space time coding, polar codes, LD codes, and Raptor codes, as well as the traditional codes such as cyclic codes, BCH, RS codes, and convolutional codes. It also explores MIMO communications, which is an effective method for high speed or high reliability wireless communications. It also examines the evolution of 5G channel coding techniques. Each of the 13 chapters features numerous illustrative examples for easy understanding of the coding techniques, and MATLAB based programs are integrated in the text to enhance readers' grasp of the underlying theories. Further, PC based MATLAB m files for illustrative examples are included for students and researchers involved in advanced and current concepts of coding theory.
