Cost-effectiveness in Health and Medicine United States. Public Health Service. Panel on Cost-effectiveness in Health and Medicine, 1996

Advanced Medical Statistics (2nd Edition) Ying Lu, Ji-qian Fang, Lu Tian, Hua Jin, 2015-06-29

The book aims to provide both comprehensive reviews of the classical methods and an introduction to new developments in medical statistics. The topics range from meta-analysis, clinical trial design, causal inference, personalized medicine to machine learning and next-generation sequence analysis. Since the publication of the first edition, there have been tremendous advances in biostatistics and bioinformatics. The new edition tries to cover as many important emerging areas and reflect as much progress as possible. Many distinguished scholars who greatly advanced their research areas in statistical methodology as well as practical applications also have revised several chapters with relevant updates and written new ones from scratch. The new edition has been divided into four sections including Statistical Methods in Medicine and Epidemiology, Statistical Methods in Clinical Trials, Statistical Genetics, and General Methods. To reflect the rise of modern statistical genetics as one of the most fertile research areas since the publication of the first edition, the brand new section on Statistical Genetics includes entirely new chapters reflecting the state of the art in the field. Although tightly related, all the book chapters are self-contained and can be read independently. The book chapters intend to provide a convenient launch pad for readers interested in learning a specific topic, applying the related statistical methods in their scientific research, and seeking the newest references for in-depth research.

Cost-Effectiveness in Health and Medicine Marthe R. Gold, Joanna E. Siegel, Louise B. Russell, Milton C. Weinstein, 1996-07-18

A unique in-depth discussion of the uses and conduct of cost-effectiveness analyses (CEAs) as decision-making aids in the health and medical fields, this volume is the product of over two years of comprehensive research and deliberation by a multi-disciplinary panel of economists, ethicists, psychometricians, and clinicians. Exploring cost-effectiveness in the context of societal decision-making for resource allocation purposes, this volume proposes that analysts include a reference case analysis in all CEAs designed to inform resource allocation and puts forth the most explicit set of guidelines together with their rationale ever defined on the conduct of CEAs. Important theoretical and practical issues encountered in measuring costs and effectiveness, evaluating outcomes, discounting, and dealing with uncertainty are examined in separate chapters. Additional chapters on framing and reporting of CEAs elucidate the purpose of the analysis and the effective communication of its findings. Cost-Effectiveness in Health and Medicine differs from the available literature in several key aspects. Most importantly, it represents a consensus on standard methods, a feature integral to a CEA whose principal goal is to permit comparisons of the costs and health outcomes of

alternative ways of improving health The detailed level at which the discussion is offered is another major distinction of this book since guidelines in journal literature and in CEA related books tend to be rather general to the extent that the analyst is left with little guidance on specific matters The focused overview of the theoretical background underlying areas of controversy and of methodological alternatives and finally the accessible writing style make this volume a top choice on the reading lists of analysts in medicine and public health who wish to improve practice and comparability of CEAs The book will also appeal to decision makers in government managed care and industry who wish to consider the uses and limitations of CEAs *JNCI, Journal of the National Cancer Institute* National Cancer Institute (U.S.),1982
