Shrub Steppe Balance And Change In A Semi Arid Terrestrial Ecosystem:

Shrub-Steppe Alec Rickard, L.E. Rogers, B.E. Vaughan, S.F. Liebetrau, 2012-12-02 Owing to man made intervention the shrub steppe now represents a rapidly disappearing landscape in the arid regions of North America This book represents a systems level study of ecological variables affecting water balance and responses to perturbation The study focused on a very large protected landscape unit comprising a natural watershed area located in the semi arid western United States Long term and concurrent data sets were established with a view towards establishing system level responses to manipulative interventions and natural perturbations like wildfire These data sets were established for micrometeorology climatology mineral cycling in soils nutrient and mineral pathways in springs and streams vegetational dynamics and population changes on the site In synthesizing nearly twenty years of data the more interesting ecosystem level responses concerned vegetational recovery and water balance For instance the synthesis uniquely demonstrates the interaction of biotic and non biotic factors and their integrated effect on regional water balance However special attention was also paid to species diversity and the genetic resource pool represented at this site This book will be of primary interest as a reference resource to land managers and wildlife specialists and as a research study for scientists interested in systems level ecology Conservation minded citizens who take more than a cursory interest in ecology will also find it interesting Shrub-steppe Balance and Change in a Semi-arid Terrestrial Ecosystem William Howard Rickard, 1988 Proceedings, Wildland Shrub and Arid Land Restoration Symposium, 1995 Wild Land Shrub and Arid Land Restoration Symposium Bruce A. Roundy, E. Durant McArthur, Jennifer S. Hayley, David K. Mann, 1996-06 An authoritative investigation of the biology and management of wildland shrubs Focuses on the development of the science of restoration ecology An in depth look at the restoration and revegetation of even the most rare shrubs Divided into six sections overview restoration and revegetation ecology genetic integrity and management options Dozens of charts graphs and photos *Evaluating Evapotranspiration for Grasslands on the Arid Lands Ecology Reserve, Benton County, and Turnbull National Wildlife Refuge, Spokane, County, Washington, May 1990 to September 1991* Stewart A. Tomlinson, 1995 **General Technical Report INT.**, 1993 **Ground Freezing Effects on Soil Erosion of Army Training Lands**, 1998 Two areas were monitored at the Yakima Training Center YTC in central Washington to measure changes in M1A2 Abrams M1 tank rut surface geometry and in and out of rut saturated hydraulic conductivity Ksubfs soil penetration resistance SPR and bulk density over the 1995 1996 winter Profile meter data show that rut cross sectional profiles smoothed significantly and that turning ruts did so more than straight ruts Rut edges were zones of erosion and sidewall bases were zones of deposition Ksubfs values were similar in and out of ruts formed on soil with 0 5 percent water by volume but were lower in ruts formed on soil with about 15 percent water Mean SPR was similar in and out of ruts from 0 to 5 cm depth increased to 2 MPa outside ruts and 4 MPa inside ruts at 10 to 15 cm depth and decreased by 10 38 percent outside ruts and by 39 48% inside ruts at the 30 cm depth Soil bulk density was similar in

and out of ruts from 0 to 2.5 cm depth and below 2.5 cm it was generally higher in ruts formed on moist soil with highest values between 10 and 20 cm depth. Conversely, density in ruts formed on dry soil was similar to out of rut density at all depths. This information is important for determining impacts of tank ruts on water infiltration and soil erosion and for modifying the Revised Universal Soil Loss Equation (RUSLE) and the Water Erosion Prediction Project (WEPP) models to more accurately predict soil losses on Army training lands. *General Technical Report RMRS*, 1998. Underwater Methods for Study of Salmonids in the Intermountain West Russell F. Thurn, 1994. Advances in Ecological Research, 1990-10-23. Volume 20 of this series deals with a variety of plant and animal ecology topics. Despite much recent work on herbivory, little attention has been given to insect herbivores active below ground. Brown and Gange describe the ecological adaptations of insects to this abundant but poor quality food resource and the responses of plants to this potentially very damaging grazing pressure. Plants living at high altitude must be able to cope with extreme climatic conditions, low carbon dioxide levels, and high radiation doses. Friend and Woodward describe these adaptations and discuss the degree to which they are genetically determined or merely the product of physiological plasticity. Thomas presents a modular concept of ecology in which modules contain a resource and its associated consumers and goes on to examine the general principles which may reflect the various mutualisms between organisms in some example fresh water modular systems. Finally, West examines the microphytic soil crusts of arid and semi arid soils. Although information on them is currently limited, they are likely to be important in some ecosystems.
