Paradigms of Combinatorial Optimization Vangelis Th. Paschos, 2013-05-06 Combinatorial optimization is a multidisciplinary scientific area lying in the interface of three major scientific domains mathematics theoretical computer science and management The three volumes of the Combinatorial Optimization series aims to cover a wide range of topics in this area These topics also deal with fundamental notions and approaches as with several classical applications of combinatorial optimization Paradigms of Combinatorial Optimization is divided in two parts Paradigmatic Problems that handles several famous combinatorial optimization problems as max cut min coloring optimal satisfiability tsp etc the study of which has largely contributed to both the development the legitimization and the establishment of the Combinatorial Optimization as one of the most active actual scientific domains Classical and New Approaches that presents the several methodological approaches that fertilize and are fertilized by Combinatorial optimization such as Polynomial Approximation Online Computation Robustness etc and more recently Algorithmic Game Theory **Handbook of Combinatorial Optimization** Ding-Zhu Du, Panos M. Pardalos, 2013-03-14 Combinatorial or discrete optimization is one of the most active fields in the interface of operations research computer science and applied mathematics Combinatorial optimization problems arise in various applications including communications network design VLSI design machine vision air line crew scheduling corporate planning computer aided design and manufacturing database query design cellular telephone frequency assignment constraint directed reasoning and computational biology Furthermore combinatorial optimization problems occur in many diverse areas such as linear and integer programming graph theory artificial intelligence and number theory All these problems when formulated mathematically as the minimization or maximization of a certain function defined on some domain have a commonality of discreteness Historically combinatorial optimization starts with linear programming Linear programming has an entire range of important applications including production planning and distribution personnel assignment finance allocation of economic resources circuit simulation and control systems Leonid Kantorovich and Tjalling Koopmans received the Nobel Prize 1975 for their work on the optimal allocation of resources Two important discoveries the ellipsoid method 1979 and interior point approaches 1984 both provide polynomial time algorithms for linear programming These algorithms have had a profound effect in combinatorial optimization Many polynomial time solvable combinatorial optimization problems are special cases of linear programming e g matching and maximum flow In addition linear programming relaxations are often the basis for many approximation algorithms for solving NP hard problems e g dualheuristics **STACS 2003** Helmut Alt, Michel Habib, 2003-07-01 This book constitutes the refereed proceedings of the 20th Annual Symposium on Theoretical Aspects of Computer Science STACS 2003 held in Berlin Germany in February March 2003 The 58 revised full papers presented together with 2 invited papers were carefully reviewed and selected from 253 submissions The papers address the whole range of theoretical computer science including

algorithms and data structures automata and formal languages complexity theory semantics logic in computer science as well as current challenges like biological computing quantum computing and mobile and net computing

Fundamentals of Computation Theory Maciej Liskiewicz, Rüdiger Reischuk, 2005-09-09 This volume is dedicated to the 15th Symposium on Fundamentals of Computation Theory FCT 2005 held in Lubeck Germany on August 17 20 2005

Graph Drawing Patrick Healy, Nikola S. Nikolov, 2006-01-21 The 13th International Symposium on Graph Drawing GD 2005 was held in Limerick Ireland September 12 14 2005 One hundred and fifteen participants from 19 countries attended GD 2005 In response to the call for papers the Program Committee received 101 submissions each detailing original research or a system demonstration Each submission was reviewed by at least three Program Committee members each referee's comments were returned to the authors Following extensive discussions the committee accepted 38 long papers 3 short papers and 3 long system demos each of which were presented during one of the conference's 12 sessions Eight posters were also accepted and were on display throughout the conference Two invited speakers Kurt Mehlhorn and George Robertson gave fascinating talks during the conference Prof Mehlhorn spoke on the use of minimum cycle bases for reconstructing surfaces while Dr Robertson gave a perspective past and present on the visualization of hierarchies As is now traditional a graph drawing contest was held during the conference The accompanying report written by Stephen Kobourov details this year's contest This year a day long workshop organized by Seok Hee Hong and Dorothea Wagner was held in conjunction with the conference A report on the Workshop on Network Analysis and Visualization written by Seok Hee Hong is included in the proceedings

Summary of Flow Modulation and Fluid-Structure Interaction Findings Wolfgang Schröder, 2010-05-16 The Collaborative Research Center SFB 401 Flow Modulation and Fluid Structure Interaction at Airplane Wings investigates numerically and experimentally fundamental problems of very high capacity aircraft having large elastic wings This issue summarizes the findings of the 12 year research program at RWTH Aachen University which was funded by the Deutsche Forschungsgemeinschaft DFG from 1997 through 2008 The research program covered the following three main topics of large transport aircraft i Model flow wakes and vortices of airplanes in high lift configuration ii Numerical tools for large scale adaptive flow simulation based on multiscale analysis and a parametric mapping concept for grid generation and iii Validated computational design tools based on direct aeroelastic simulation with reduced structural models
