

The background of the slide is a collage of five vertical panels, each showing different types of microorganisms under a microscope. From left to right: 1. A large, oval, brownish microorganism with a textured surface. 2. A large, blue, spherical microorganism with a rough, bumpy surface. 3. A cluster of purple, rod-shaped microorganisms. 4. A cluster of green, oval microorganisms. 5. A large, green, spherical microorganism with a rough surface and many small, dark, circular structures on its surface.

**Microbial Control of Carbon Sequestration** Yang Yang,Anna Gunina,Peng Shi,Yan Xing Dou,2025-06-09 As a major regulator of the dynamics of soil organic carbon SOC and nutrient availability soil microorganisms partake in a variety of biochemical reactions Soil microorganisms exert two primary contradictory impacts on controlling soil carbon dynamics firstly they enhance carbon release into the atmosphere via the catabolic activity secondly they prevent release through stabilizing SOC in a form that resists decomposition Because of the large soil carbon pool even small changes in the balance between inputs and outputs from the soil carbon pool can exert a significant impact on atmospheric CO<sub>2</sub> levels Over the past few decades the influence of climate change such as the increased CO<sub>2</sub> levels rising temperature sudden heat or drought stress and extreme weather events on soil carbon cycling have been intensively analyzed The focus on investigating the global carbon cycle due to its connection to climate change has led to an increasing number of studies on microbial control of SOC It has been extensively recognized that the extent of the soil SOC reservoir is determined by microbial involvement since soil carbon dynamics ultimately stem from microbial activity and growth However the mechanisms by which these microbe regulated processes cause soil carbon stabilization under climate change is still unclear This Research Topic of Frontiers in Environmental Science Soil Processes focuses on climate change and its impact on soil microbial control carbon sequestration Brief Research Report Correction Data Report Editorial Hypothesis 2 Recent advancements in soil carbon dynamics under the influence of global climate change 3 Biogeochemical mechanisms connecting soil microbes and SOC 4 The role of soil microbes in the SOC conversion process 5 The new high throughput sequencing for soil microbes including metagenome transcriptomics metabonomics methods etc 6 Response of soil microbes to climate change and their impacts on SOC transformation and fixation 7 Addressing uncertainty in estimating SOC pool at the local regional and global scales

Control *Handbook of Research on Microbial Tools for Environmental Waste Management* Pathak, Vinay

Mohan,Navneet,2018-04-27 The remediation of environmental pollutants has become a relevant topic within the field of waste management Advances in biological approaches are a potential tool for contamination and pollution control The Handbook of Research on Microbial Tools for Environmental Waste Management is a critical scholarly resource that explores the advanced biological approaches that are used as remediation for pollution cleanup processes Featuring coverage on a broad range of topics such as biodegradation microbial dehalogenation and pollution controlling treatments this book is geared towards environmental scientists biologists policy makers graduate students and scholars seeking current research on environmental engineering and green technologies Microbial Control of Vector-Borne Diseases Brij Kishore

Tyagi,Dharumadurai Dhanasekaran,2018-01-29 Vector borne diseases have increasingly emerged as significant causes of

human illnesses worldwide largely due to environmental changes deforestation population movements migration and travelling international trades and buildup of drug resistance These are presenting major challenge to the efficacy and use of conventional tools for controlling vector borne diseases Therefore use of microbial approach for the control of vector borne diseases is gaining importance This book comprehensively reviews vector borne diseases and their microbial control emphasizing majorly on ecofriendly ways of microbial control      *Microbes and Microbial Technology* Iqbal Ahmad, Farah Ahmad, John Pichtel, 2011-02-01 This book focuses on successful application of microbial biotechnology in areas such as medicine agriculture environment and human health      **Health Impacts of Large Releases of Radionuclides** John V. Lake, Gregory R. Bock, Gail Cardew, 2008-04-30 This up to the minute account examines how radionuclides affect human health It explores how radionuclides travel through various food chains and how they are transported throughout the terrestrial and aquatic environments      Microbial Biosorption of Metals Pavel Kotrba, Martina Mackova, Tomas Macek, 2011-01-13 Heavy metals always pose serious ecological risks when released into the environment due to their elemental non degradable nature regardless of their chemical form This calls for the development of efficient and low cost effluent treatment and metal recuperation technologies for contaminated waste water not only because regulatory limits need to be met but also because the waste itself can be a resource for certain precious metals Biosorption is a general property of living and dead biomass to rapidly bind and abiotically concentrate inorganic or organic compounds from even very diluted aqueous solutions As a specific term biosorption is a method that utilizes materials of biological origin biosorbents formulated from non living biomass for the removal of target substances from aqueous solutions Recent research on biosorption provides a solid understanding of the mechanism underlying microbial biosorption of heavy metals and related elements This book gathers review articles analyzing current views on the mechanism and bio chemistry of biosorption the performance of bacterial fungal and algal biomass and the practical aspects of biosorbent preparation and engineering It also reviews the physico chemical evaluations of biosorbents and modelling of the process as well as the importance of biosorption during heavy metal removal using living cells It is a reference work for scientists environmental safety engineers and R D specialists who wish to further promote biosorption research and use the accumulated knowledge to develop and build industrial applications of biosorption in heavy metal separation technologies      **Biotechnology, Bioremediation** Kim Guenther, 1994      **Biotechnology** Kim Guenther, 1995-07 Contains 162 annotated citations on genetics remediation of all types pesticides decontamination decomposition bioengineering etc Author subject indices
