Perception With An Eye For Motion:

Perception with an Eye for Motion James E. Cutting, 1986-01 Perception with an Eye for Motion analyzes the availability and use of visual information from moving objects and by moving observers to conclude that information in our visual environment is sufficiently rich so that perception can occur largely without the help of cognition The book is unique in several respects It is interdisciplinary in scope combining philosophy history perceptual science and research in a sound balance the problems that philosophers and computer scientists are dealing with are taken up in a way that will appeal to psychologists It is the first book to treat invariance in perception in a rigorous manner and it solves the problem of direction finding in optic flow the motions of objects generated by our own movement through space by discerning what information is useful and can be relied upon The first five chapters take up information for vision delving into philosophical and historical issues particularly the trustworthiness of perception and the relation of space and projections of objects as discussed in art and science These chapters also cover optics illusions picture perception and more particularly invariance as a term from mathematics applied to perception Eight chapters present the author's own research published here for the first time These include experiments and results concerning the perception of a moving planar surface and the perception of one's direction of movement through an environment The book concludes by discussing two centuries old classes of perceptual theory direct and indirect perception and a new theory class which the author calls directed perception James E Cutting is Professor of Psychology Cornell University A Bradford Book Perception and Control of Self-motion Rik Warren, Alexander H. Wertheim, 2014-01-14 This book presents studies of self motion by an international group of basic and applied researchers including biologists psychologists comparative physiologists kinesiologists aerospace and control engineers physicians and physicists Academia is well represented and accounts for most of the applied research offered Basic theoretical research is further represented by private research companies and also by government laboratories on both sides of the Atlantic Researchers and students of biology psychology physiology kinesiology engineering and physics who have an interest in self motion whether it be underwater in space or on solid ground will find this volume of interest This book presents studies of self motion by an international group of basic and applied researchers including biologists psychologists comparative physiologists kinesiologists aerospace and control engineers physicians and physicists Academia is well represented and accounts for most of the applied research offered Basic theoretical research is further represented by private research companies and also by government laboratories on both sides of the Atlantic Researchers and students of biology psychology physiology kinesiology engineering and physics who have an interest in self motion whether it be underwater in space or on solid ground will find this volume of interest **Aspects of Motion Perception** Paul A. Kolers, 2013-10-22 International Series of Monographs in Experimental Psychology Volume 16 Aspects of Motion Perception details the fundamental concepts of the visual system perception of motion The text first details the various findings about illusory and veridical motions along

with the theories conceptualized from those findings Next the selection covers the research that studies the reliability and validity of the theories about motion perception The book also discusses the importance of two component model of motion perception The last chapter covers the characteristics of the status of perceptual experiences The book will be of great use to behavioral scientists and biologists Ophthalmologists will also benefit from the text

From Neuron to Action Lüder Deecke, John Eccles, Vernon B. Mountcastle, 2013-03-09 A rich source of information about human voluntary movement in health and disease can be found in this book The most esteemed researchers in their respective fields bring you up to date articles Their collected work combines fundamental research in the life sciences with clinical neuroscience in a unique overview The interdisciplinary aspects of motor physiology uncover a wealth of information for researchers from neighboring disciplines For example oculomotor research vestibular research equilibrium sensory research and cognition evolution synaptic and elementary processes and the neurological sciences can be discovered

Tutorials on Motion Perception Alexander H. Wertheim, 2012-12-06 From August 24-29 1980 the international Symposium on the Study of Motion Perception Recent Developments and Applications sponsored by NATO and organized by the editors of this book was held in Veldhoven the Netherlands The meeting was attended by about eighty scholars including psychologists neurologists physicists and other scientists from fourteen different countries During the symposium some fifty research papers were presented and a series of tutorial review papers were read and discussed The research presentations have been published in a special issue of the international journal of psychonomics Acta Psychologica Vol 48 1981 The present book is a compilation of the tutorial papers The tutorials were arranged around early versions of the chapters now appearing in this book The long discussions at the Veldhoven tutorial sessions resulted in extensive revisions of the texts prior to this publication Unfortunately this led to a delay in publication but we feel that this was justified by a greater depth of understanding which in our opinion has significantly increased the quality of the book As they now stand the chapters cover most of the issues relevant to the study of motion perception Also they clearly reflect the intensive exchange of knowledge that took place during the symposium As such we think that this book can be used both as an advanced text for students and scientists alike and as a comprehensive reference source

Vertigo Thomas Brandt, 2013-06-29 This monograph has been written for clinicians who are involved in the management of the dizzy patient and for scientists with a particular interest in the multi sensorimotor mechanisms that subserve spatial orientation motion perception and ocular motor and postural control Special emphasis has been put on making the correct diagnosis and detailed recommendations have been given for specific treatments The second edition has resulted in an almost completely new book due to the dramatic expansion in the 1990s of our understanding of vestibular function and disorders A few relevant examples include the novel concept of canalolithiasis as opposed to cupulolithiasis both of which are established causes of typical posterior and horizontal canal benign paroxysmal positioning vertigo familial episodic ataxia and II have been identified as inherited canalopathies otolithic syndromes were recognized as a variety

separate from semicircular canal syndromes several new central vestibular syndromes have been described localized and attributed to vestibular pathways and centres a new classification based on the three major planes of action of the vestibulo ocular reflex is available for central vestibular syndromes and the mystery of the location and function of the multisensory vestibular cortex is slowly being unravelled This book differs from other clinical textbooks in that it is not divided into two parts anatomy and physiology on the one hand and disorders on the other *Visual motion and self-motion processing in the human brain, MPI Series in Biological Cybernetics, Bd. 31* Elvira Fischer, 2011 For the successful recognition of objective real motion based on visual cues it is necessary to take self induced motion signals into account such as those induced by eye movements During a series of fMRI studies we measured responses of visual and parietal regions to motion cues derived from a retinal motion b eyemovements visual pursuit and c objective real motion We show that the recently described cingulate sulcus visual area CSv is not as implied before primarily driven by 3D self motion cues but favoured 2D translational coherent motion over 3D expanding flow fields Further we found that V3A is capable of integrating retinal motion with eye movements thus allowing V3A to respond to object motion independent of retinal motion This allowed us to define a new functional localizer for area V3A Finally we showed that activity in the foveal representation of the early visual cortex is driven by a combination of retinal input and by error signals as hypothesized by of Rao and Ballard 1999 for predictive coding Taken together this work provides evidence that regions V3A and CSv are key regions concerning visual self motion processing and that early visual regions might be modulated by feedback from higher motion processing regions

Role of Inner Ear in Self and Environment Perception Alexis Bozorg Grayeli, Christophe Lopez, Christian Van Nechel, Michel Toupet, 2020-03-11 **Dynamics of Visual Motion Processing** Guillaume S. Masson, Uwe J. Ilg, 2009-12-02 Motion processing is an essential piece of the complex brain machinery that allows us to reconstruct the 3D layout of objects in the environment to break camouflage to perform scene segmentation to estimate the ego movement and to control our action Although motion perception and its neural basis have been a topic of intensive research and modeling the last two decades recent experimental evidences have stressed the dynamical aspects of motion integration and segmentation This book presents the most recent approaches that have changed our view of biological motion processing These new experimental evidences call for new models emphasizing the collective dynamics of large population of neurons rather than the properties of separate individual filters Chapters will stress how the dynamics of motion processing can be used as a general approach to understand the brain dynamics itself **Yale Psychological Studies** , 1905 *Psychological Monographs* , 1905 Includes music **Visual Perception** Vicki Bruce, Patrick R. Green, Mark A. Georgeson, 2003 This edition contains over 460 additional references and the treatment of visual psychology in the early chapters has been extensively revised Digital Synesthesia Katharina Gsöllpointner, Ruth Schnell, Romana Karla Schuler, 2016-05-10 Die Publikation versammelt die Ergebnisse des künstlerischen Forschungsprojekts DIGITAL SYNESTHESIA 2013 2016 und stellt erstmals ein
