Peripheral Neurology Case Studies:

Peripheral Neurology Jay Allan Liveson, 2000-09-21 *Peripheral Neurology* was the first book to innovatively utilize case presentations as a vehicle to teach peripheral neurology. In fact, it was the first to categorize the field of peripheral neurology as most other neurology texts concentrated on diseases of the central nervous system. This case approach has since been emulated in many other texts and on various web sites. Emphasizing the clinical condition rather than electrodiagnostic technique, each topic is thoroughly addressed first in the Fundamental Concepts of Part I and then in multiple Case Studies presented in Part II. The reader is able to simulate a true clinical environment where a diagnosis has to be arrived at with no organizational clues from the text. Formulating conclusions by analyzing the history, physical and laboratory data and linking from case to related case, this is the only text which allows this type of interactive reading. The book addresses many rare entities that the author is able to present based on his 30 years of experience. **Peripheral Neurology** Jay Allan

Liveson, Steven Howard Horowitz, 1992 **Peripheral Neurology** Jay Allan Liveson, Neil Irwin Spielholz, Steven Howard Horowitz, 1979 **Neurology Case Studies** Sheldon M. Wolf, Theodore L. Munsat, Peter B. Dunne, 1972 *Case Studies in Neurological Pain* Claudia Sommer, Douglas W. Zochodne, 2012-11-22 Pain is one of the most common symptoms of neurological disease and its appropriate management is essential to the effective care of patients. Neurological disorders differ in their specific pain phenotype, mechanisms and therapy. *Case Studies in Neurological Pain* addresses the specific pain issues, treatment and pathophysiology in patients with a wide spectrum of neurological disease. Clinical case studies have long been recognized as a useful adjunct to problem-based learning and continuing professional development. They emphasize the need for clinical reasoning, integrative thinking, problem-solving, communication, teamwork and self-directed learning, all desirable generic skills for health care professionals. Presenting real-life cases covering conditions including diabetic and idiopathic polyneuropathies, focal neuropathies, multiple sclerosis and headache disorders, this book provides neurologists, neurosurgeons, pain clinic specialists and primary care physicians with an understanding of problems encountered in neurological practice. There are also chapters on mechanisms of neurological pain and new treatment guidelines. *Case Studies in Sleep Neurology* Antonio Culebras, 2010-09-23 Sleep disorders are increasingly recognized as a major clinical problem with significant morbidity and considerable economic importance. This compendium of case studies presents a diverse range of situations which challenge the problem-solving abilities of all those interested in sleep disorders, covering both common and unusual cases. Each case begins with a clinical history followed by examination findings and special investigations and culminating in diagnosis, treatment and management with discussion of differential diagnosis where appropriate. Focusing attention on the major categories of sleep medicine including insomnia, hypersomnias, sleep breathing disorders, parasomnias, movement disorders, circadian dysrhythmias and the neurology of sleep, this clinical guide promotes integrative thinking and diagnostic skill. Historical and review citations, illustrations and concise real-life stories

Double-Crush Syndrome Vladimir Golovchinsky, 2012-12-06 Carpal tunnel and other entrapment syndromes are perhaps the most common work related injuries currently reported. With this book Vladimir Golovchinsky presents the first evidence of double crush syndrome as a subgroup of these. To date the existence of double crush syndrome has been a matter of debate. Dr. Golovchinsky presents a statistical analysis of substantial clinical material which finds a cause and effect relationship between cervical or lumbar radiculopathy and peripheral entrapment in corresponding nerves thus proving the existence of double crush syndrome. This book will be invaluable to physicians performing EMG/NCV testing and to other healthcare professionals who encounter peripheral entrapment syndromes in their practices.
