ideal text for courses on the environment environmental history history of science and the philosophy of science

Surviving the Future David Fleming, Shaun Chamberlin, 2016 *Surviving the Future* is a story drawn from the fertile ground of the late David Fleming's extraordinary *Lean Logic A Dictionary for the Future and How to Survive It* That hardback consists of four hundred and four interlinked dictionary entries inviting readers to choose their own path through its radical vision Recognizing that *Lean Logic*'s sheer size and unusual structure can be daunting Fleming's long time collaborator Shaun Chamberlin has selected and edited one of these potential narratives to create *Surviving the Future* The content rare insights and uniquely enjoyable writing style remain Fleming's but are presented here at a more accessible paperback length and in conventional read it front to back format The subtitle *Culture Carnival and Capital in the Aftermath of the Market Economy* hints at Fleming's vision He believed that the market economy will not survive its inherent flaws beyond the early decades of this century and that its failure will bring great challenges but he did not dwell on this We know what we need to do We need to build the sequel to draw on inspiration which has lain dormant like the seed beneath the snow *Surviving the Future* lays out a compelling and powerfully different new economics for a post growth world One that relies not on taut competitiveness and eternally increasing productivity putting the grim into reality but on the play humor conversation and reciprocal obligations of a rich culture Building on a remarkable breadth of intellectual and cultural heritage from Keynes to Kumar Homer to Huxley Mumford to MacIntyre Scruton to Shiva Shakespeare to Schumacher Fleming describes a world in which as he says there will be time for music This is the world that many of us want to live in yet we are told it is idealistic and unrealistic With an evident mastery of both economic theory and historical precedent Fleming shows that it is not only desirable but actually the only system with a realistic claim to longevity With friendliness humor and charm *Surviving the Future* plucks this vision out of our daydreams and shows us how to make it real **Ecological Reparation** Dimitris

Papadopoulos, Maria Puig de la Bellacasa, Maddalena Tacchetti, 2023-12-01 How do we engage with the threat of social and environmental degradation while creating and maintaining liveable and just worlds Researchers from diverse backgrounds unpack this question through a series of original and committed contributions to this wide ranging volume The authors explore practices of repairing damaged ecologies across different locations and geographies and offer innovative insights for the conservation mending care and empowerment of human and nonhuman ecologies This ground breaking collection establishes ecological reparation as an urgent and essential topic of public and scholarly debate *Sustainability* Jeremy L.

Caradonna, 2022-05-06 From one of the world's leading experts on the subject a fully updated introduction to the sustainability movement from the 1600s to today **Towards Green Campus Operations** Walter Leal Filho, Fernanda

Frankenberger, Patricia Iglecias, Roberta Consentino Kronka Mülfarth, 2018-05-14 Matters related to sustainable development albeit global in nature are best handled at the local level This line of thinking is particularly true to the higher education context where the design and implementation of sustainability initiatives on campuses can demonstrate how a given

university translates the principles of sustainable development into practice at the institutional level Yet there is a paucity of specific events where a dialogue among sustainability academics and practitioners concerned with a research projects b teaching and c planning and infra structure leading to campus greening takes place so as to allow a transdisciplinary and cross sectoral exchange of ideas and experiences on the issues matters and problems at hand It is against this background that this book has been prepared It is one of the outcomes of the First Symposium on Sustainability in University Campuses SSUC 2017 organised by the University of S o Paulo in Brazil Manchester Metropolitan University UK the Research and Transfer Centre Applications of Life Sciences of the Hamburg University of Applied Sciences Germany and the Inter University Sustainable Development Research Programme IUSDRP This book showcases examples of campus based research and teaching projects regenerative campus design low carbon and zero carbon buildings waste prevention and resilient transport among others It also demonstrates the role of campuses as platforms for transformative social learning and research and explores the means via which university campuses can be made more sustainable The aims of this publication are as follows i to provide universities with an opportunity to obtain information on campus greening and sustainable campus development initiatives from round the world ii to document and promote information ideas and experiences acquired in the execution of research teaching and projects on campus greening and design especially successful initiatives and good practice iii to introduce methodological approaches and projects which aim to integrate the topic of sustainable development in campus design and operations This book entails contributions from researchers and practitioners in the field of campus greening and sustainable development in the widest sense from business and economics to arts administration and environment

Place, Ecology and the Sacred Michael S. Northcott, 2015-06-18 People are born in one place Traditionally humans move around more than other animals but in modernity the global mobility of persons and the factors of production increasingly disrupts the sense of place that is an intrinsic part of the human experience of being on earth Industrial development and fossil fuelled mobility negatively impact the sense of place and help to foster a culture of placelessness where buildings fields and houses increasingly display a monotonous aesthetic At the same time ecological habitats and diverse communities of species are degraded Romantic resistance to the industrial evisceration of place and ecological diversity involved the setting aside of scenic or sublime landscapes as wilderness areas or parks However the implication of this project is that human dwelling and ecological sustainability are intrinsically at odds In this collection of essays Michael Northcott argues that the sense of the sacred which emanates from local communities of faith sustained a parochial ecology which over the centuries shaped communities that were more socially just and ecologically sustainable than the kinds of exchange relationships and settlement patterns fostered by a global and place blind economy Hence Christian communities in medieval Europe fostered the distributed use and intergenerational care of common resources such as alpine meadows forests or river catchments But contemporary political economists neglect the role of boundaried places and spatial limits in

the welfare of human and ecological communities Northcott argues that place based forms of community dwelling and exchange such as a local food economy more closely resemble evolved commons governance arrangements and facilitate the revival of a sense of neighbourhood and of reconnection between persons and the ecological places in which they dwell

Ecocultures Steffen Böhm,Zareen Pervez Bharucha,Jules Pretty,2014-12-05 The world faces a perfect storm of social and ecological stresses including climate change habitat loss resource degradation and social economic and cultural change In order to cope with these communities are struggling to transition to sustainable ways of living that improve well being and increase resilience This book demonstrates how communities in both developed and developing countries are already taking action to maintain or build resilient and sustainable lifestyles These communities here designated as Ecocultures are exemplars of the art and science of sustainable living Though they form a diverse group they organise themselves around several common organising principles including an ethic of care for nature a respect for community high ecological knowledge and a desire to maintain and improve personal and social wellbeing Case studies from both developed and developing countries including Australia Brazil Finland Greenland India Indonesia South Africa UK and USA show how based on these principles communities have been able to increase social ecological and personal wellbeing and resilience They also address how other more mainstream communities are beginning to transition to more sustainable resilient alternatives Some examples also illustrate the decline of ecocultures in the face of economic pressures globalisation and climate change Theoretical chapters examine the barriers and bridges to wider application of these examples Overall the volume describes how ecocultures can provide the global community with important lessons for a wider transition to sustainability and will show how we can redefine our personal and collective futures around these principles

Sustainable Agriculture Reviews 27 Eric Lichtfouse,2018-05-08 This book deals with a rapidly growing field aiming at producing food and energy in a sustainable way for humans and their children It is a discipline that addresses current issues climate change increasing food and fuel prices poor nation starvation rich nation obesity water pollution soil erosion fertility loss pest control and biodiversity depletion This series gathers review articles that analyze current agricultural issues and knowledge then proposes alternative solutions

The Temporalities of Waste Fiona Allon,Ruth Barcan,Karma Eddison-Cogan,2020-10-29 This book investigates the complex and unpredictable

temporalities of waste Reflecting on waste in the context of sustainability materiality social practices subjectivity and environmental challenges the book covers a wide range of settings from the municipal garbage crisis in Beirut to food rescue campaigns in Hong Kong and the toxic by products of computer chip production in Silicon Valley Waste is one of the most pressing issues of the day central to environmental challenges and the development of healthier and more sustainable futures The emergence of the new field of discard studies in addition to expanding research across other disciplines within the social sciences is testament to the centrality of waste as a crucial social material and cultural problem and to the need for multi and transdisciplinary approaches like those provided in this volume This edited collection seeks to develop a framework that understands the material properties of different kinds of waste not as fixed stable or singular but as dynamic relational and often invisible It brings together new and cutting edge research on the temporalities of waste by a diverse range of international authors Collectively this research presents a persuasive argument about the need to give more credence to the capacities of waste to provoke us in materially and temporally complex ways especially those substances that complicate our understandings of life as bounded duration This book will be of great interest to students and scholars of the environmental humanities cultural studies anthropology and human geography
