Second Tier Cities Rapid Growth Beyond The Metropolis:

Second Tier Cities, 1999 Second Tier Cities Ann R. Markusen, Yong-Sook Lee, Sean DiGiovanna, 1999 Over the past thirty years transnational investment trade and government policies have encouraged the decentralization of national economies disrupting traditional patterns of urban and regional growth Many smaller cities such as Seattle Washington Campinas Brazil Oita Japan and Kumi Korea have grown markedly faster than the largest metropolises Dubbed here second tier cities they are home to specialized industrial complexes that have taken root provided significant job growth and attracted mobile capital and labor The culmination of an ambitious five year fourteen city research project conducted by an international team of economics and geographers *Second Tier Cities* examines the potential of these new regions to balance uneven regional development create good stable jobs and moderate hyper urbanization Comparing across national borders the contributors describe four types of second tier cities Marshallian industrial districts hub and spoke cities satellite platforms and government anchored complexes They find that both industrial and regional policies have been important contributors to the rise of second tier cities though the former often trump the latter Lessons for local national and international policymakers are drawn The authors are critical of devolution and argue that it must be accompanied by strong labor and environmental standards and mechanisms to overcome differential regional resource endowments *Second Rank Cities in Europe* Roberto Camagni, Roberta Capello, 2017-10-02 Second rank cities are back on the academic scene capturing the interest of scholars with their unexpected recent performance with respect to first rank cities Looking at the data on average urban GDP growth in 139 European cities since 1996 the relatively strong position of large cities over 1 5 million inhabitants on national growth coincides with the periods of fastest expansion while at times of slowdown second rank cities prevail Especially in the recent period of economic downturn second rank cities have recorded annual GDP growth rates much less negative than those of capital cities and in some European countries like Austria and Germany all cities have outperformed their capitals In explaining this phenomenon linking urban dynamics to agglomeration theories seems the most interesting approach However merely to link agglomeration economies to urban size in order to interpret urban performance is neither convincing nor sufficient and it calls for additional investigation into how agglomeration economies work This volume claims that interpretation of the current dynamics in European urban systems especially in the western part of Europe would benefit from exploitation of the traditional concept of agglomeration economies However necessary for this purpose are more in depth considerations on the nature scope intensity and causes of agglomeration economies which do not relate their existence solely to urban size And this is where the main challenge for scholars lies in the interpretation of the missing link between agglomeration economies and urban dynamics This book was originally published as a special issue of *European Planning Studies* *Secondary Cities* Mark Pendras, Charles Williams, 2021-06-03 This book explores cities and the intra regional relational dynamics often overlooked by urban scholars and it challenges

common representations of urban development successes and failures Gathering leading international scholars from Europe Australia and North America it explores the secondary city concept in urban development theory and practice and advances a research agenda that highlights uneven development concerns By emphasising the subordinate status of secondary cities relative to their dominant neighbours the book raises new questions about regional development in the Global North It considers alternative relations and development strategies that innovatively reimagine the subordinate status of secondary cities and showcase their full potential *Reinventing Local and Regional Economies* Gerald L. Gordon, 2011-09-26 Recent US economic history is rife with examples of cities and regions that have experienced significant decline Many of those localities began to slide after decades even generations of feeling immune to economic disaster Boeing and Kodak the steel industry in Pittsburg and the automotive industry in Detroit all expected to make it golden into the distant future Tapping into the available body of knowledge as well as through nearly 70 interviews the experiences of those who lived and worked in those times in cities around the United States to identify the most effective strategies Reinventing Local and Regional Economies delineates the dos and don'ts to observe in order to sustain economic vitality in any community Written by Dr Gerald Gordon president and chief executive officer of the Economic Development Authority in Fairfax County Virginia the book explores lessons learned and examines the messages communities must be mindful of in order to ensure future economic stability Drawing on more than 30 years of experience Gordon identifies a set of foundational lessons that while they are not guarantees of success certainly portend failure if ignored by local planners Each chapter explores a different prerequisite and then applies it to several case studies of the reinvention of local and regional economies Each of these basic components of economic growth will then be examined against the backgrounds of the many communities studied thus permitting comparisons and contrasts to be drawn A comparative analysis of results from one community to another across a wide range of case studies this book puts into clear context the observations about what works not only in one locale but in communities with common features facing common issues and getting similar results Using case studies and real world examples of successes and failures Dr Gordon provides the tools to develop a proactive strategy that positions your community for surviving and thriving regardless of external stresses and adverse economic conditions that may be out of your control Hub Cities in the Knowledge Economy Sven Conventz, Ben Derudder, Alain Thierstein, Frank Witlox, 2016-05-13 The overarching research topic addressed in this book is the complex and multifaceted interaction between infrastructural accessibility connectivity of city regions on the one hand and knowledge generation in these city regions on the other hand To this end the book brings together chapters analysing how infrastructural accessibility is related to changing patterns of business location of knowledge intensive industries in city regions The chapters in this book specifically dwell on recent manifestations of and developments in the accessibility knowledge nexus with a particular metageographical focus on how this materializes in major city regions In the different chapters this shifting relation is

The Political Economy of Rural-Urban Conflict Topher L. McDougal, 2017-04-14 In some cases of insurgency the combat frontier is contested and erratic as rebels target cities as their economic prey In other cases it is tidy and stable

seemingly representing an equilibrium in which cities are effectively protected from violent non state actors What factors account for these differences in the interface between urban based states and rural based challengers To explore this question this volume examines two regions representing two dramatically different outcomes In West Africa Liberia and Sierra Leone capital cities became economic targets for rebels who posed dire threats to the survival of the state In Maoist India despite an insurgent ideology aiming to overthrow the state via a strategy of progressive city capture the combat frontier effectively firewalls cities from Maoist violence This book argues that trade networks underpinning the economic relationship between rural and urban areas termed interstitial economies may differ dramatically in their impact on and response to the combat frontier It explains rebel predatory tendencies towards cities as a function of transport networks allowing monopoly profits to be made by urban based traders It explains combat frontier delineation as a function of the social structure of the trade networks hierarchical networks permit elite elite bargains that cohere the frontier These factors represent what might be termed respectively the hardware and software of the rural urban economic relationship Of interest to any student of political economy and violence this book presents new arguments and insights about the relationships between violence and the economy predation and production core and periphery *The Economic Viability of Micropolitan America* Gerald L.
