Dark Web Hitmen Emma Williams, AI, 2025-02-27. Dark Web Hitmen explores the unsettling world of alleged hitman-for-hire services on the dark web, questioning whether these platforms are genuine criminal enterprises or elaborate scams. This true-crime investigation delves into the intersection of technology and criminal behavior, examining real-life cases of individuals seeking to commission murder online. While the existence of functional hitman services is largely unconfirmed, the book argues that the perception of their existence poses a significant threat, highlighting the dangers of online exploitation. The book begins by establishing the context of the dark web, explaining its architecture and accessibility. It then presents detailed case studies of individuals arrested for attempting to hire hitmen online, exploring their motivations and psychological states. A key insight is that many of these sites are likely sophisticated scams designed to extract money from vulnerable individuals. The technical aspects of the dark web platforms, including security protocols and cryptocurrency payment methods, are analyzed to determine the likelihood of genuine criminal activity. Ultimately, Dark Web Hitmen provides a fact-based and analytical assessment of the risks and realities of dark web hitman services. Drawing from court records, law enforcement investigations,

and cybersecurity expert interviews the book culminates in an evaluation of the implications for law enforcement cybersecurity professionals and the general public offering recommendations for preventing online exploitation and mitigating associated risks Advanced Intelligent Computing Technology and Applications De-Shuang Huang,Wei Chen, Jiayang Guo, 2024-07-29 This 13 volume set LNCS 14862 14874 constitutes in conjunction with the 6 volume set LNAI 14875 14880 and the two volume set LNBI 14881 14882 the refereed proceedings of the 20th International Conference on Intelligent Computing ICIC 2024 held in Tianjin China during August 5 8 2024 The total of 863 regular papers were carefully reviewed and selected from 2189 submissions This year the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications Therefore the theme for this conference was Advanced Intelligent Computing Technology and Applications Papers that focused on this theme were solicited addressing theories methodologies and applications in science and technology
