Markets From Networks Socioeconomic Models Of Production:

Markets from Networks Harrison C. White, 2018-06-05 In *Markets from Networks* one of America's most influential sociologists unveils a groundbreaking theory of the market economy. Arguing that most economists use overly abstract models of how the economy operates, Harrison White seeks a richer, more empirically based alternative. In doing so, he offers a more lucid, generalized treatment of the market models described in his important earlier work in order to show how any given market is situated in a broader exchange economy. White argues that the key to economic action is that producers seek market niches to maximize profit and minimize competition. As they do so, they base production decisions not only on anticipated costs from suppliers and anticipated demand from buyers but also by looking at their competitors. In fact, White asserts, producers act less in response to actual demand than by anticipating it; they gauge where competitors have found demand and thus determine what they can do that is similar and yet different enough to give themselves a special niche. Building on these and related insights, White creates new mathematical models of how the economy works and how the interaction of its sectors creates mutual protection from the uncertainties of business. These models provide new ways of accounting for profits, prices, market shares, and other vital economic phenomena. He shows, for example, that prices are determined by the coalescing of local variables rather than set in terms of averages as implied by the law of supply and demand. The model of pure competition favored by economics is deficient, he concludes, as it fails to account for the varied circumstances of particular industries. Throughout, White draws extensively on case studies of American businesses and on recent mathematical and sociological work on networks. Rivaling standard economic theories with its rich empirical grounding, sheer originality, and scholarly rigor, *Markets from Networks* will resonate in economics and economic sociology for years to come.

Markets from Culture Patricia H. Thornton, 2004 Institutional logics, the underlying governing principles of societal sectors, strongly influence organizational decision making. Any shift in institutional logics results in a similar shift in attention to alternative problems and solutions and in new determinants for executive decisions. Examining changes in institutional logics in higher education publishing, this book links cultural analysis with organizational decision making to develop a theory of attention and explain how executives concentrate on certain market characteristics to the exclusion of others. Analyzing both qualitative and quantitative data from the 1950s to the 1990s, the author shows how higher education publishing moved from a culture of independent domestic publishers focused on creating markets for books based on personal relational networks to a culture of international conglomerates that create markets from corporate hierarchies. This book offers broader lessons beyond publishing; its theory is applicable to explaining institutional changes in organizational leadership, strategy, and structure occurring in all professional services industries.

Economic Networks David Knoke, 2014-01-21 Social relations are crucial for understanding diverse economic actions, and a network perspective is central to that explanation. Simple exchanges involving money, labor, and commodities combine into complexly connected

systems Economic networks span many levels of analysis from persons consumers employees to groups households workteams organizations corporations interest groups populations industries markets and the rapidly expanding global economic system David Knoke blends network theories from a range of disciplines and empirical studies of domestic and international economies to illuminate how economic activity is embedded in and constrained by social ties among economic actors Social capital in the form of connections to others holding valuable resources is vital for finding a job buying a car creating a new industry or triggering a global financial crisis In nontechnical terms the author explicates the core network concepts measures and analysis methods behind these phenomena The book also includes many striking network diagrams to provide visual insights into complex structural patterns This accessible book offers an invaluable critique for both undergraduate and graduate students in economic sociology and social network analysis courses who seek a better understanding of the multifaceted economic webs in which we are all entangled

Concepts of Value in European Material Culture, 1500-1900 Bert De Munck,Dries Lyna,2016-03-09 In contemporary society it would seem self evident that people allow the market to determine the values of products and services For everything from a loaf of bread to a work of art to a simple haircut value is expressed in monetary terms and seen as determined primarily by the objective interplay between supply and demand Yet this price mechanism is itself embedded in conventions and frames of reference which differed according to time place and product type Moreover the dominance of the conventions of utility maximising and calculative homo economicus is a relatively new phenomenon and one which directly correlates to the steady advent of capitalism in early modern Europe This volume brings together scholars with expertise in a variety of related fields including economic history the history of consumption and material culture art history and the history of collecting to explore changing concepts of value from the early modern period to the nineteenth century and present a new view on the advent of modern economic practices Jointly they fundamentally challenge traditional historical narratives about the rise of our contemporary market economy and consumer society
