wonders Aviation's most historically relevant and arguably most influential aircraft planes like the elliptical winged Spitfire the blisteringly fast X-15 and the ubiquitous Learjet are dramatically showcased in individual chapters. Factors like performance, price, operational efficiency and perceptions in popular culture are examined. People are just as important as hardware in the discussion of the world's greatest aircraft. The larger-than-life characters who designed and built these aeronautical marvels, men like the reclusive Howard Hughes and the demanding Clarence Kelly Johnson, are an indispensable part of the story. So too are the fearless pilots like Charles Lindbergh and Chuck Yeager who gave life to the shining examples of a new and dynamic industry. The authors have flown or flown in many of the featured aircraft and they knew many of the luminous personalities involved, enabling them to share unique perspectives. The preface is written by William Lloyd Stearman, a former staff member of the National Security Council and the son of famed industry engineer Lloyd Stearman. The introduction is written by Norman R. Augustine, the retired Chairman and CEO of Lockheed Martin Corporation. The foreword is written by Burt Rutan, the renowned aircraft designer and founder ofScaled Composites. Each aircraft is magnificently illustrated in color, mostly with paintings by leading aviation artists.

Luftwaffe Emergency Fighters

Robert Forsyth, 2017-06-29 In late 1944 the German Air Ministry organised what it called an Emergency Fighter Competition intended to produce designs for quick to build yet technically and tactically effective jet fighter aircraft capable of tackling the anticipated arrival of the B-29 Superfortress over Europe as well as the British Mosquito and US P-38 Lightning which were appearing in ever greater numbers. Thus was born a cutting edge, highly sophisticated series of aircraft including the futuristic and elegant Focke-Wulf Ta 183, the extraordinary Blohm und Voss P 212 and the state-of-the-art Messerschmitt P 1101 series. Armed with heavy cannon and the latest air-to-air rockets and missiles, these were designed to inflict carnage on American bomber formations at high speed. Using stunning three-view illustrations of each prototype along with full-colour artwork, aviation expert Robert Forsyth traces the history of the extraordinary aircraft of the Emergency Fighter Competition. Hitler's last throw of the dice in the air war against the Allies.

The Secret Horsepower Race

Calum E. Douglas, 2020-12-02 The piston engines that powered Second World War fighters, the men who designed them and the secret intelligence work carried out by both Britain and Germany would determine the outcome of the first global air war. Advanced jet engines may have been in development, but every militarily significant air battle was fought by piston-engined fighters. Whoever designed the most powerful piston engines would win air superiority and with it the ability to dictate the course of the war as a whole. This is the never-before-told story of a high-tech race hidden behind the closed doors of design offices and intelligence agencies to create the war's best fighter engine. Using the fruits of extensive research in archives around the world together with the previously unpublished memoirs of fighter engine designers, author Calum E. Douglas tells the story of a desperate contest between the world's best engineers.
