New Approaches To The Treatment Of Leukemia:

New Approaches to the Treatment of Leukemia Emil J. Freireich, 2012-12-06 The European School of Oncology came into existence to respond to a need for information education and training in the field of the diagnosis and treatment of cancer. There are two main reasons why such an initiative was considered necessary. Firstly, the teaching of oncology requires a rigorously multidisciplinary approach which is difficult for the Universities to put into practice since their system is mainly disciplinary orientated. Secondly, the rate of technological development that impinges on the diagnosis and treatment of cancer has been so rapid that it is not an easy task for medical faculties to adapt their curricula flexibly. With its residential courses for organ pathologies and the seminars on new techniques: laser monoclonal antibodies, imaging techniques etc, or on the principal therapeutic controversies: conservative or mutilating surgery, primary or adjuvant chemotherapy, radiotherapy alone or integrated, it is the ambition of the European School of Oncology to fill a cultural and scientific gap and thereby create a bridge between the University and Industry and between these two and daily medical practice. **New Approaches**

Cancer Immunology: Innovative Approaches to Therapy Ronald B. Herberman, 2012-12-06 This volume is the second in the Cancer Treatment and Research series focussing on basic and clinical tumor immunology. It has a rather different focus or emphasis from that of the first volume published two years ago: *Basic and Clinical Tumor Immunology* R B Herberman ed Martinus Nijhoff Publishers 1983 devoted considerable attention to up dated summaries in various areas of classical tumor immunology: specific antitumor immunity, the immunologic competence of cancer patients, characterization of human tumor associated antigens, the ability to propagate specifically immune T cells in culture in the presence of interleukin 2 and the use of such cells for adoptive immunotherapy of established tumors, of evidence concerning the immune. However, it also reviewed the status surveillance hypothesis and pointed out the need to consider non T cell mediated mechanisms of

host resistance In particular one chapter summarized information on the role of macrophages in host resistance against tumors The present volume continues to emphasize one of the major themes of the first volume innovative approaches to the therapy of cancer It involves contributions from leading investigators on several primary types of therapeutic interventions related to monoclonal antibodies the collaboration of monoclonal antibodies with macrophages to mediate antibody dependent cellular cytotoxicity lymphokines tumor vaccines and natural killer cells It also has an up to date summary of the immunologic aspects of the exciting and promising work being performed on human T cell leukemia virus in the laboratory of Dr Robert Gallo An Evidence-based Approach to the Treatment and Care of the Older Adult with Cancer Diane G.
