Legacy System Modernization Strategies Robert C. Seacord,2001 Abstract Modernization of legacy enterprise systems introduces many challenges due to the size complexity and frailty of the legacy systems Size and complexity issues often dictate that these systems are incrementally modernized and new functionality is incrementally deployed before the modernization effort is concluded This in turn requires that legacy components operate side by side with modernized components in an operation system introducing additional problems In this report we discuss some alternative development approaches for incrementally modernizing legacy systems including consideration of the advantages and disadvantages of each approach These development alternatives can be mapped against the peculiarities of a particular modernization effort to recommend an appropriate approach

A Survey of Legacy System Modernization Approaches Santiago Comella-Dorda,2000 Abstract Information systems are critical assets for modern enterprises and incorporate key knowledge acquired over the life of an organization Although these systems must be updated continuously to reflect evolving business practices repeated modification has a cumulative effect on system complexity and the rapid evolution of technology quickly renders existing technologies obsolete Eventually the existing information systems become too fragile to modify and too important to discard

However organizations must consider modernizing these legacy systems to remain viable The commercial market provides a variety of solutions to this increasingly common problem of legacy system modernization However understanding the strengths and weaknesses of each modernization technique is paramount to select the correct solution and the overall success of a modernization effort This paper provides a survey of modernization techniques including screen scraping database gateway XML integration database replication CGI integration object oriented wrapping and componentization of legacy systems This general overview enables engineers performing legacy system modernization to preselect a subset of applicable modernization techniques for further evaluation
